

THE POSSIBILITIES ARE INFINITE

FLEXFRAME FOR mySAP BUSINESS SUITE

Flexibility through self-organisation

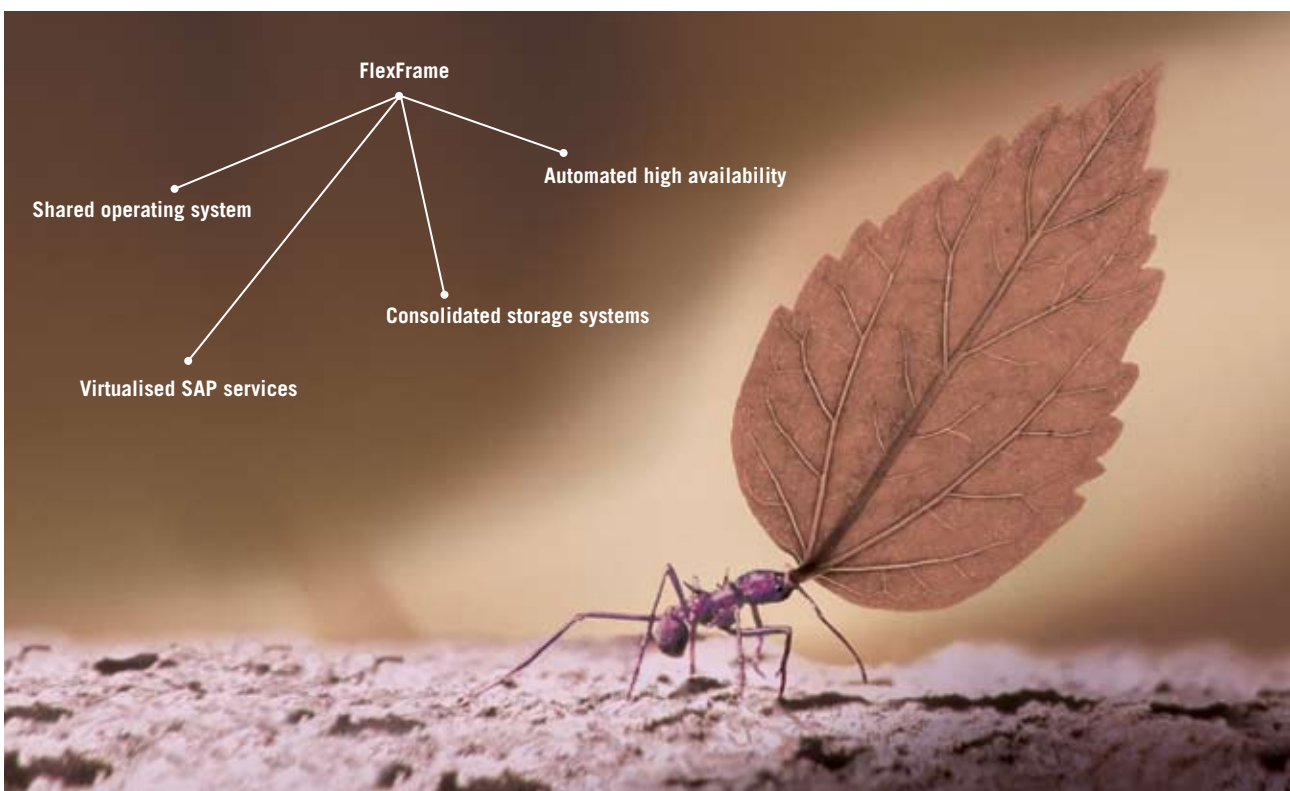

Let's start off with the essentials. FlexFrame is unlike anything you've seen before in the SAP environment. Our TCO analysis has shown that FlexFrame can let you achieve savings that average 60 per cent, and at the same time you get a host of benefits that you won't want to do without in the future. Best of all, FlexFrame isn't just wishful theory but a revolutionary solution that has already convinced more than 60 customers. And you could be next!

ACCELERATED BUSINESS PROCESSES

FlexFrame is the optimum IT infrastructure to enable your SAP solutions, such as mySAP ERP, to adapt more quickly to changing business needs.

DISTRIBUTED INTELLIGENCE

Adaptive computing means having the IT resources you need, where and when you need them. FlexFrame gives you the flexibility of adaptive computing, simply and efficiently.

PERFORMANCE AND AGILITY

FlexFrame makes short work of simplifying your SAP infrastructure and your process landscape.

FAST TRACK WITH JOBSHARING

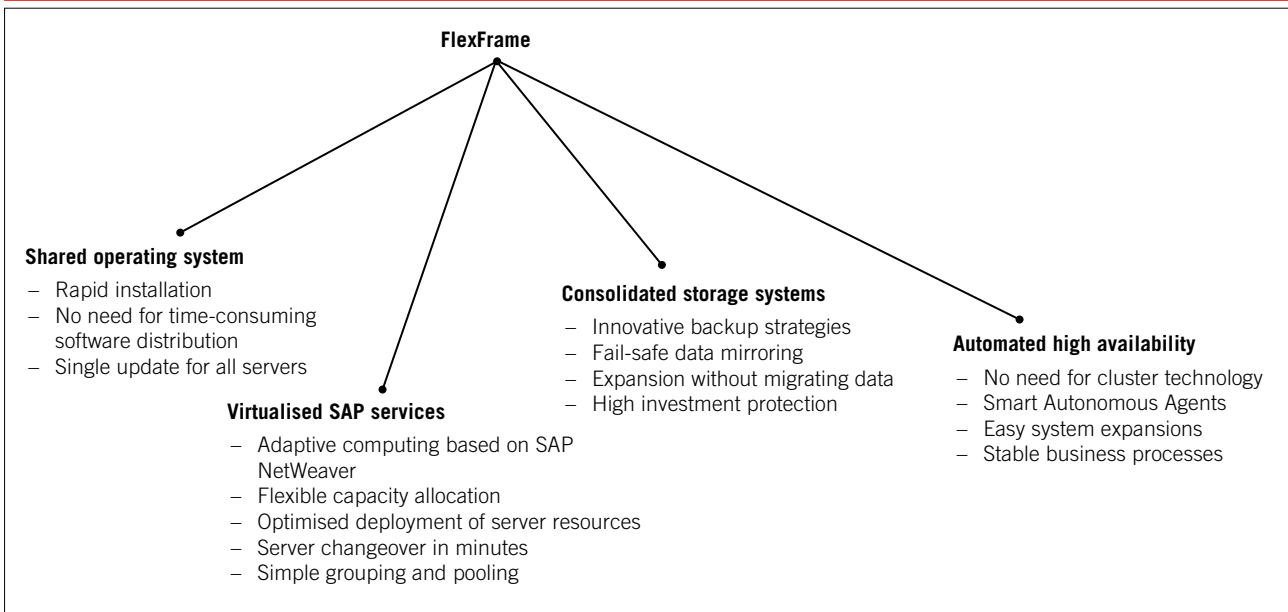

FlexFrame’s modular architecture replaces rigid hardware and software configurations with virtual bridges. Computing power, storage resources, network components and mySAP ERP solutions can all be independently scaled and assigned dynamically. The result is a highly adaptable infrastructure that responds to changing business process needs in real time. All strategic IT resources are available on demand, giving you greater enterprise-wide agility. Let’s face it, flexibility is everything in a world where business processes are evolving at lightning speed.

ADAPTIVE COMPUTING IN REAL LIFE
Virtualised resources, automated management

FlexFrame is designed from the ground up for intelligent management of resources. Because it organises all server and storage resources, it handles variations in workload by reassigning available capacity in a matter of seconds. This ensures consistently high levels of performance and efficiency with fewer resources. Your investment levels and administration effort drop dramatically. FlexFrame is the first realisation of SAP’s adaptive computing platform, SAP NetWeaver, and is a solution jointly developed by Fujitsu/ Fujitsu Siemens Computers and SAP.

FLEXFRAME FEATURES

LEAN, DYNAMIC, SCALABLE

FlexFrame reduces your TCO by up to 60 per cent

Independent studies have proven that FlexFrame reduces SAP infrastructure operating costs by up to 60 per cent and significantly accelerates ROI. It integrates seamlessly in existing environments and provides a long-term growth path by expanding on demand to support system upgrades and new solutions. FlexFrame can open up new possibilities for your IT department.

SINGLE-SOURCE SOLUTIONS

PRIMERGY and PRIMEPOWER servers as platform of choice

With FlexFrame, you can power your SAP solutions on an Intel or Solaris-based platform. FlexFrame automatically adapts to your individual needs. We have tested all our server and storage system combinations to guarantee the highest levels of performance, reliability and scalability.

OVER 60 PROJECTS IN TWO YEARS

Benefit from our best practices

FlexFrame has already been successfully implemented in over 60 projects where it has resulted in substantial cost savings. Scaling from 50 to several thousand users, this infrastructure solution is suited to the widest range of deployment scenarios. Why not put our experience and two-year lead to work for your company?

“FlexFrame is a milestone for managing SAP environments, because for the first time we can now dynamically change our IT resources in response to our business requirements. And as economically as possible!”

Hennie Wesseling, Chief Information Officer, TPG N.V.

FLEXFRAME ESSENTIALS IN REVIEW

FlexFrame	Shared operating system	Virtualised SAP services	Consolidated storage systems	Automated high availability
Highlight	Automatic on-demand start up of the operating system on the various servers from a central source.	SAP solution components no longer fixed to specific servers. Any SAP service, any server, any time.	Flexible, on-demand allocation of storage resources.	Automatic integration and failover of new hardware and SAP services using FlexFrame Autonomous Agents.
Increased flexibility	Zero-downtime update and patch testing, lower costs for software distribution and licenses, reduced workload.	Standardised application virtualisation with the Adaptive Computing Controller integrated in SAP NetWeaver.	Industry-leading Network Attached Storage (NAS) solutions.	Minimum downtime for testing and low training costs.
Value	Easily create and scale new SAP landscapes. Support for Linux, Solaris and mixed Linux/Solaris environments.	Improved ROI due to optimised deployment of server resources.	Storage consolidation, rapid implementation of customised high-availability and backup strategies.	Stable business processes, costly cluster technology unnecessary.

About Fujitsu

Fujitsu is a full service provider of information technology and communications solutions. Throughout Australia and New Zealand we partner with our customers to consult, design, build, operate and support business solutions. From strategic consulting to application and infrastructure solutions and services, Fujitsu has earned a reputation as the single supplier of choice for leading corporate and government organisations.
