

U-Scan Kiosk Self-Checkout

The new Kiosk version of the U-Scan is specifically designed for debit and credit card transactions, and it dispenses cash as an added convenience for the shopper. The kiosk model is perfect for remote locations, food courts, music departments, and as an alternative to an ATM. Its compact size is also perfect for convenience stores, drug stores, and other retailers with limited space.

Ideal for small footprints

The Kiosk is specifically designed as a stand-alone terminal that combines the Customer and Attendant Station functionality in the one station. The Kiosk can, therefore, be positioned independently in various and remote locations.

Measurements are approximate. U-Scan® layout availability is subject to individual store set-ups, e.g.: accessibility to electrical outlets, width of shopping carts, direction of exit, etc.
