

PalmSecure™ LOGONDIRECTOR with PalmSecure Mouse

Secure Logical Access and Single Sign-On Solution
with Fujitsu Palm Vein Biometric Authentication Technology

Fujitsu's PalmSecure biometric mouse authentication device and PalmSecure Logon Director software provide best-in-class solution for login security, access management, and data protection for your enterprise.

PalmSecure LOGONDIRECTOR Client Edition

Designed to provide a highly accurate and non-intrusive authentication solution, the Client Edition offers an easy way to verify user identity, ensuring protection of files and folders from unauthorized personnel.

Relieved from having to remember a single password, PalmSecure LOGONDIRECTOR seamlessly interfaces to Single Sign-on software, adding another level of security in accessing files and increasing user productivity while reducing costs associated with password resets.

PalmSecure LOGONDIRECTOR Client Edition offers two modes for operation, standalone and enterprise. Standalone edition is ideal for small to medium size companies looking to secure information and provide accurate authentication of each employee. Enterprise edition is intended for large company deployments needing centralized administration and control.

Utilizing Microsoft Active Directory or SQL database as the central repository allows the flexibility to securely store user credentials. PalmSecure LOGONDIRECTOR also features an integrated enterprise level event logging capability, enabling IT staff to produce an audit trail of user operations, which help to comply with governmental regulations such as HIPAA, Sarbanes-Oxley and Gramm-Leach Bliley.

Key Features:

- Palm vein biometrics logon
- Administration console
- Compatible with Microsoft Active Directory and SQL database
- Fast and easy enrollment
- Non-intrusive Authentication
- Encrypted repository for template storage
- HIPPA reporting and tracking
- Windows 2000, XP compatibility
- Enterprise level event logging capability
- Windows 2000 and 2003 Server
- Single Sign-On connectivity

PalmSecure™ Mouse

Your Biometric Choice for Strong Authentication

The Fujitsu PalmSecure Mouse device is a highly reliable, non-invasive and easy to use biometric authentication mechanism that easily integrates into your login security and access management environments. The PalmSecure Mouse scanner captures a palm vein pattern image and generates a unique template for identity matching. Combined with PalmSecure Logon Director, both individuals and enterprise customers can deploy a secure biometric login system with extended Single Sign-On capabilities.

Fast, Easy and Accurate User Authentication

Quickly gaining access to data is critical in many of today's work environments. While deployment of the PalmSecure mouse will help protect against deceitful access to sensitive information, it also enables an immediately and convenient authentication process for users.

How It Works

Simply place your palm 2 inches above the PalmSecure mouse scanner and within a second the device captures a near-infrared image of your unique palm vein pattern. Fujitsu's advanced algorithm converts this image into a digitized biometric template and matches it against a database of pre-registered templates. The algorithm will determine whether the comparison of templates results in a match to confirm the identity.

PalmSecure Specifications

Description

Outer dimensions	2.48 (W) x 4.72 (D) x 1.54 (H) inches
Weight	0.35 lb
Interface	USB 2.0
Supply voltage	DC 5V 500mA (USB bus powered)
Photography distance	1.97 inches from the surface of the sensor
Operating temperature	41-95F
Ambient light	Natural light / Florescent light: below 2000 lux. Incandescent / Halogen light: below 500 lux.
Supported OS	Windows XP
Supported Hardware	CPU Pentium4 2GHz or greater, Memory 256MB or greater

About Fujitsu Computer Products of America, Inc.

Fujitsu Computer Products of America, Inc. is a subsidiary of Fujitsu Limited, a leading provider of customer-focused IT and communications solutions for the global marketplace. FCPA provides innovative solutions for the U.S. marketplace. Current product and service offerings include high performance hard disk drives, Magneto-Optical drives, scanners and scanner maintenance, palm vein recognition technology, 10Gb Ethernet switches and degaussers.

Key Features:

- Palm Vein Biometric Authentication
- Forgery Protection based on "liveliness"
- Obvious hygienic advantage
- False rejection rate of 0.01%
- Standard USB Connection
- Supports existing Windows-based infrastructures
- False acceptance rate of less than 0.00008%
