

FOR IMMEDIATE RELEASE

**SMALL TREE COMMUNICATIONS INTRODUCES FIRST
COMPLETE 10GbE CX-4 SOLUTION FOR MAC OS X**

Fujitsu Agreement Provides High Performance, Low Cost Solution for Apple Space

SAN FRANCISCO, CA, January 10, 2006—Small Tree Communications (booth #2411), the leading provider of unique, state-of-the-art enterprise networking solutions for Mac OS X, has reached an OEM agreement with Fujitsu for its 10GbE CX-4 switches, enabling Small Tree to offer the first complete 10GbE CX-4 bundle solution in the Apple market space. The end-to-end integrated solution provided by Small Tree includes a 12 port Fujitsu switch, Intel 10GbE CX-4 Network Interface Cards, Small Tree 10GbE drivers and BlazeFS file sharing system software.

“Fujitsu has an excellent reputation for providing products with high performance at attractive price points that are backed by exceptionally reliable engineering,” stated Corky Seeber, president of Small Tree Communications. “This agreement will enable Apple customers to meet their increasing networking needs at a lower relative cost.”

As the demand for greater network bandwidth continues to grow, 10GbE CX-4 promises to be an attractive solution for businesses big and small. Whereas Fibre Channel cards provide 2Gb or 4Gb capability, Small Tree’s bundle solution provides 10Gb performance capability, streamlining workflow and helping users meet stringent deadlines efficiently and effectively.

“Customers appreciate reliable technology capable of handling complex applications, and together with Small Tree Communications, those customers can deploy 10Gb Ethernet as a high performance, scalable technology to interconnect servers and storage systems,” said Lorne Wilson, senior vice president, sales and marketing, Fujitsu Computer Products of America.

About Small Tree Communication

Small Tree Communications is dedicated to providing unique leading edge enterprise networking solutions to the Mac. With world-class high performance computing experience from its team of networking and kernel developers, Small Tree brings new technology peripheral products to meet the demanding application requirements of Mac Customers. Small Tree provides leading edge
