BIOS SECTION T4210

T Series BIOS BIOS SETUP UTILITY

The BIOS Setup Utility is a program that sets up the operating environment for your tablet. Your BIOS is set at the factory for normal operating conditions, therefore there should be no need to set or change the BIOS environment to operate your tablet.

The BIOS Setup Utility configures:

- Device control feature parameters, such as changing I/O addresses and boot devices.
- System Data Security feature parameters, such as passwords.

Entering the BIOS Setup Utility

To enter the BIOS Setup Utility, do the following (or use the TrustedCore Menu, as detailed in the next section):

- 1. Turn on or restart your notebook.
- 2. Press [F2] once the Fujitsu logo appears on the screen. This will open the main menu of the BIOS Setup Utility with the current settings displayed.
- 3. Press the [RIGHT ARROW] or [LEFT ARROW] key to scroll through the other setup menus to review or alter the current settings.

Using the TrustedCore Menu

When the Fujitsu logo appears on the screen. press the [Enter] key or click on the left mouse or touchpad button; the TrustedCore Menu will appear.

The TrustedCore Menu provides shortcuts to the following menus and information screens:

- BIOS Setup
- Diagnostic Screen
- Boot Menu
- Patent Information
- System Information
- Continue Booting

Clicking on any of the fields will invoke the screen, information, or action described.

The Boot Menu can also be invoked by pressing the [F12] key when the Fujitsu logo appears on the screen.

Navigating through the Setup Utility

The BIOS setup utility consists of six menus: Main, Advanced, Security, Boot, Info and Exit. This document explains each menu in turn including all submenus and setup items.

The following procedures allow you to navigate the setup utility menus:

- 1. To select a menu, use the cursor keys: $[\leftarrow]$, $[\rightarrow]$.
- To select a field within a menu or a submenu, use the cursor keys: [♠], [♥].
- 3. To select the different values for each field, press the [Spacebar] to change to the next higher selection and [F5] or [-] to go to the next lower selection.
- 4. To activate a submenu press the [Enter] key.
- 5. To return to a menu from a submenu, press the [Esc] key.
- 6. To go to the Exit menu from any other menu, press the [Esc] key.
 - Selecting a field causes a help message about that field to be displayed on the right-hand side of the screen.

- Pressing the Enter key with the highlight on a selection that is not a submenu or auto selection will cause a list of all options for that item to be displayed.
 Pressing the Enter key again will select the highlighted choice.
- 7. Pressing the [F9] key resets all items in the BIOS to the default values.
- 8. Pressing the [F10] key saves the current configuration and exits the BIOS Setup Utility. You will be asked to verify this selection before it is executed.
- 9. Pressing the [F1] key gives you a general help screen.

Entering the Setup Utility After a Configuration Change or System Failure

If there has been a change in the system configuration that does not agree with the parameter settings stored in your BIOS memory, or there is a failure in the system, the system beeps and/or displays an error message after the Power On Self Test (POST). If the failure is not too severe, it will give you the opportunity to modify the settings of the setup utility, as described in the following steps:

 When you turn on or restart the computer there is a beep and/or the following message appears on the screen:

Error message - please run SETUP
program Press <F1> key to continue,
<F2> to run SETUP

2. If an error message is displayed on the screen, and you want to continue with the boot process and start the operating system anyway, press the [F1] key.

- If your tablet emits a series of beeps that sounds like a code and the display is blank, please refer to the Troubleshooting section of your system Use's Guide. The Troubleshooting Section includes a list of error messages and their meanings.
- If your data security settings require it, you may be asked for a password before the operating system will be opened.
- 3. If an error message is displayed on the screen, and you want to enter the setup utility, press the [F2] key.
- 4. When the setup utility starts with a fault present, the system displays the following message:

Warning! Error message [Continue]

Press any key to enter the setup utility. The system will then display the Main Menu with current parameters values.

MAIN MENU – SETTING STANDARD SYSTEM PARAMETERS

The Main Menu allows you to set or view the current system parameters. (See Navigating through the Setup Utility on page 2 for more information)

The following tables show the names of the menu fields for the Main menu and its submenus, all of the options for each field, the default settings and a description of the field's function and any special information needed to help understand the field's use. Note that the actual drive labels shown may vary.

System Time and System Date can also be set from your operating system without using the setup utility. Use the Date and Time icon on your Windows Control panel or type time or date from the MS-DOS prompt.

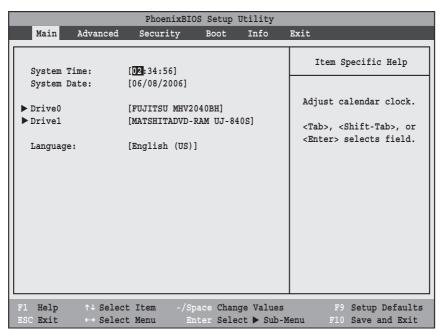

Figure 1. Main Menu

Table 1: Fields, Options and Defaults for the Main Menu

| Menu Field | Options | Default | Description |
|--------------|---------|---------|---|
| System Time: | _ | _ | Sets and displays the current time. Time is in a 24 hour format of hours:minutes:seconds with 2 digits for each. (HH:MM:SS). Example: 16:45:57. You may change each segment of the time separately. Move between the segments with the [Tab] key and/or [Shift] + [Tab] keys. |

Main Menu

Table 1: Fields, Options and Defaults for the Main Menu

| Menu Field | Options | Default | Description |
|--------------|---|---|---|
| System Date: | _ | _ | Sets and displays the current date. Date is in a month/day/ year numeric format with 2 digits each for month and day and 4 digits for year. (MM/DD/YYYY) for example: 03/20/1998. You may change each segment of the date separately. Move between the segments with the [Tab] key and/or [Shift] + [Tab] keys. |
| Drive0 | Selects the Drive0 Serial ATA drive sub- menu | The product number of the hard drive. | Display the type of device on this ATA/IDE interface. Pressing the Enter key selects the DriveO submenu allowing additional device configuration options for this interface. |
| Drive1: | Selects the Drive1 Serial ATA drive sub- menu | The product number of the CD-ROM drive. | Display the type of device on this ATA/IDE interface, if there is one. Pressing the Enter key selects the Serial ATA Drive1 submenu allowing additional device configuration options for this interface. |
| Language: | ■ English (US) ■ Japanese (JP) | [English (US)] | The default setting differs between the US/European and the Japanese model. Selects the display language for the BIOS. |

Drive0 Submenu of the Main Menu

The Drive0 submenu identifies what ATA devices are installed.

Note that actual hard drive label shown may vary. Depending on the drive type, information such as cylinders, heads and sectors may also be displayed.

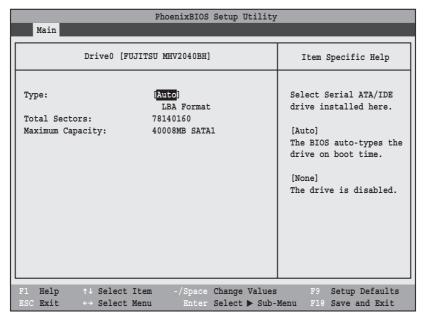

Figure 2. Drive0 Submenu

| Menu Field | Options | Default | Description | |
|--------------------|------------------|---------|---|--|
| Туре: | ■ Auto ■ None | [Auto] | Selects the hard drive device type. Select Auto to have the type automatically identified by the BIOS at POST. If None is selected, all of the following Setup items do not appear. | |
| LBA Format Logical | | | Logical Block Addressing (LBA) | |
| Total Sectors: | | | The total number of sectors on your hard disk | |
| Maximum Capacity: | | | The maximum capacity of your hard disk | |

- A bootable CD-ROM or DVD-ROM may have a floppy disk or hard drive format. When a bootable CD-ROM or DVD-ROM is used, drive allocations change automatically without changing the BIOS setup. If a floppy disk format CD-ROM or DVD-ROM is used, the disc becomes Drive A. The CD-ROM or DVD-ROM will only take drive C: (hard drive format) if the internal hard drive is not present or is disabled. The bootable CD-ROM or DVD-ROM can never use a C: designation if a formatted internal hard drive is present since the C: designator is always reserved for the internal hard drive. The boot sequence ignores the new drive designations, however, your application software will use the new designations.
- Be aware of the operating environment when booting from CD-ROM/DVD-ROM or you may mistakenly overwrite files.

Drive1 Submenu of the Main Menu

The Drive1 submenu allows you to configure secondary ATA devices.

Note that actual hard drive label shown may vary. Depending on the drive type, information such as cylinders, heads and sectors may also be displayed.

|----------------------------|---|------------|--|
| Туре: | • Auto • None | [Auto] | NOTE: The Type field does not appear as a drop-down menu. Tap the spacebar to toggle the selections. Selects the ATA/ATAPI device type. Select Auto to have the type automatically identified by the BIOS at POST. If None is selected, all of the following setup items do not appear. |
| Multi-Sector Transfers: | Disabled2 Sectors4 Sectors8 Sectors16 Sectors | [Disabled] | The best option is selected by the BIOS automatically when Auto is selected and cannot be selected by the user. Specifies the number of sectors per block for multiple sector transfer. |
| LBA Mode Control: | Disabled Enabled | [Disabled] | The best option is selected by the BIOS automatically when Auto is selected and cannot be selected by the user. Enables or disables Logical Block Addressing in place of Cylinder, Head, Sector addressing. |

| Menu Field | Options | Default | Description |
|--------------------|--|------------|--|
| Transfer Mode: | • Standard • Fast PIO 1 • Fast PIO 2 • Fast PIO 3 • Fast PIO 4 • Multiword DMA 1 • Multiword DMA 2 | [Standard] | When Type is set to [Auto], the BIOS automatically selects the optimal Transfer Mode settings. These settings cannot be changed by the user. |
| Ultra DMA Mode: | Disabled Mode 0 Mode 1 Mode 2 Mode 3 Mode 4 Mode 5 | [Disabled] | When Type is set to [Auto], the BIOS automatically selects the optimal Transfer Mode settings. These settings cannot be changed by the user. |

Exiting from Main Menu

When you have finished setting the parameters on this menu, you can either exit from the setup utility, or move to another menu. If you wish to exit from the setup utility, press the [Esc] key or use the cursor keys to go to the Exit menu or to move to another menu.

ADVANCED MENU – SETTING DEVICE FEATURE CONTROLS

The Advanced Menu allows you to:

- Set the I/O addresses for the infrared ports.
- Set the features of the keyboard/mouse.
- Select between the display panel and/or an external CRT display or video projector.
- Set internal device configurations
- Configure USB features.
- Configure miscellaneous features such as Wake Up On LAN.
- Configure DMI Event Logging.

Follow the instructions for Navigating Through the Setup Utility to make any changes.

(See Navigating through the Setup Utility on page 2 for more information)

The following tables show the names of the menu fields for the Advanced Menu and its submenus, all of the options for each field, the default settings and a description of the field's function, and any special information needed to help understand the field's use.

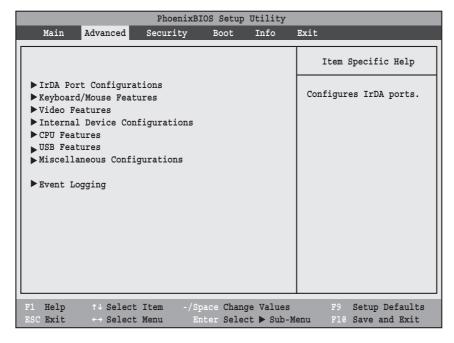

Figure 4. Advanced Menu

Table 4: Fields, Options and Defaults for the Advanced Menu

| Menu Field | Description |
|-----------------------------------|--|
| IrDA Port Configurations | When selected, opens the IrDA Port Configurations submenu which allows the user to modify settings for infrared ports. |
| Keyboard/Mouse Features | When selected, opens the Keyboard/Mouse Features submenu, which allows setting external and internal keyboard and mouse parameters. |
| Video Features | When selected, opens the Video Features submenu, which allows setting of the display parameters, including routing of video signals to different displays or video projectors. |
| Internal Device Configurations | When selected, opens the Internal Device Configuration submenu, which allows enabling or disabling the IDE LAN, and modem controllers. |
| CPU Features | When selected, opens the CPU Features submenu, which allows the user to enable or disable Core Multi-Processing and modify the Intel(R) SpeedStep(R) features. |
| USB Features | Configures USB features. |
| Miscellaneous Configurations | Configures miscellaneous features, such as Wake Up On LAN and Power Button. |
| Event Logging | When selected, opens the event logging submenu. |

IrDA Port Configuration Submenu of the Advanced Menu

The IrDA Port Configuration submenu provides the ability to set the I/O addresses and interrupt levels for the infrared ports of your system.

 To prevent IRQ and address conflicts, avoid changing the default settings.

I/O addresses, DMA channels, and Interrupt levels can be entered in various ways, including via the BIOS setup utility, the control software for the I/O device, or the hardware. If any two ports or devices have the same I/O address assigned your tablet will not function normally. Please keep a record of original settings before making any changes in the event that a restoration is required. See your hardware and software documentation as well as the setup utility to determine settings, limitations, etc.

- The BIOS will warn you of resource conflicts by placing a yellow asterisk next to each device that is in conflict.
- All I/O addresses in Table 5 are in hexadecimal.

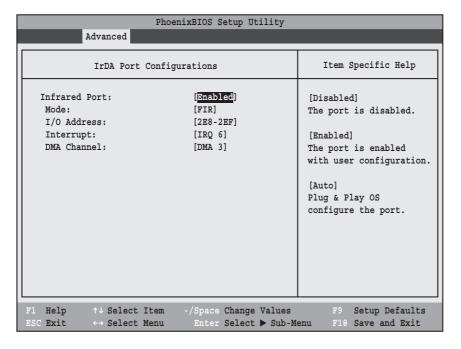

Figure 5. IrDA Port Configuration Submenu

Table 5: Fields, Options and Defaults for IrDA Port Configuration Submenu of Advanced Menu

| Menu Field | Options | Default | Description |
|----------------|---|-------------|--|
| Infrared Port: | DisabledEnabledAuto | [Enabled] | Configures the infrared port using either no configuration (Disabled), a user defined configuration (Enabled), or by allowing the BIOS or OS to choose the configuration (Auto). |
| Mode: | ■ IrDA ■ FIR | [FIR] | Select whether to use normal infrared or fast infrared mode. |
| I/O Address: | 3F8 - 3FF2F8 - 2FF3E8 - 3EF2E8 - 2EF | [2E8 - 2EF] | Allows user to set the infrared port base I/O address when infrared port is Enabled. |
| Interrupt: | ■ IRQ 3 ■ IRQ 6 ■ IRQ 10 ■ IRQ 11 | [IRQ 6] | Allows user to set the infrared port interrupt when infrared port is Enabled. |
| DMA Channel: | ■ DMA 1 ■ DMA 3 | [DMA 3] | Allows user to set the infrared port DMA Channel when the infrared port is Enabled. |

Keyboard/Mouse Features Submenu of the Advanced Menu

The Keyboard/Mouse Features submenu is for setting the parameters of NumLock.

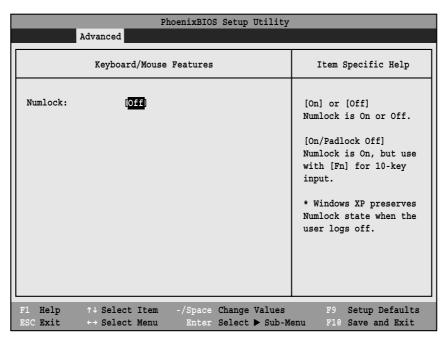

Figure 6. Keyboard/Mouse Features Submenu

Table 6: Fields, Options and Defaults for the Keyboard/Mouse Submenu of the Advanced Menu

| Menu Field | Options | Default | Description |
|------------|-----------------------|---------|---|
| Numlock: | On Off On/Padlock Off | [Off] | Sets the NumLock function state when the computer completes booting. When [On] or [Off], Numlock is on or off. When [On/ Padlock Off] is selected, Numlock is on, but [Fn] key must be pressed used for 10-key input. When [Auto] is selected, Numlock is set to On/Padlock Off when a PS/2 keyboard is connected, otherwise it is off. Windows XP preserves Numlock state when the user logs off. |

Video Features Submenu of the Advanced Menu

The Video Features Submenu is for setting the display parameters.

| PhoenixBIOS Setup Utility | | | | | |
|--|---|--|--|--|--|

| Menu Field | Options | Default | Description |
|-----------------------|--|--------------------|---|
| Event Log Capacity: | | Space Available | Display only. |
| Event Log Validity: | | Valid | Display only. |
| View Event Log: | ■ Enter | [Enter] | Allows you to view content of event log. |
| Event Logging: | DisabledEnabled | [Enabled] | Turns event logging on and off for all DMI events. |
| System Boot Event: | DisabledEnabled | [Disabled] | Turns event logging on and off for DMI system boot events. |
| Clear All Event Logs: | ■ No ■ Yes | [No] | When set to [Yes] all event logs will be cleared at next boot. |
| Mark Events as Read: | ■ Enter | [Enter] | Allows you to make all events currently in the event log as read. |

SECURITY MENU – SETTING THE SECURITY FEATURES

The Security menu allows you to set up the data security features of your tablet to fit your operating needs and to view the current data security configuration. Follow the instructions for Navigating Through the Setup Utility to make any changes. (See Navigating through the Setup Utility on page 2 for more information)

Entering a password incorrectly three times in a row will cause the keyboard and mouse to be locked out and the warning [System Disabled] to be displayed. If this happens, restart the computer by turning off and on the power with the power switch and use the correct password on reboot. Note: Unless you have previously enabled the power switch in the BIOS, it will not be possible to turn off the unit with the switch. This is applicable for non-ACPI OS's.

If you set a password, write it down and keep it in a safe place. If you forget the password you will have to contact your support representative to regain access to your secured functions and data.

- If you make an error when re-entering the password a [Warning] will be displayed on the screen. To try again press the [Enter] key and then retype the password. Press the [Esc] key to abort the password setting process.
- If the Password on Boot is Disabled you will not have to type your password upon resuming the system from the Standby or Hibernate modes.

The following tables show the names of the menu fields for the Security menu and its submenus, the options for each field, the default settings and a description of the field's function and any special information needed to help understand the field's use. The default condition is no passwords required and no write protection.

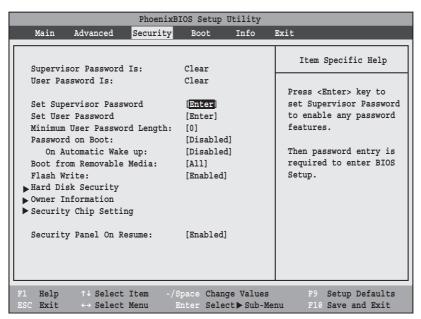

Figure 13. Security Menu

Table 13: Fields, Options and Defaults for the Security Menu

| Menu Field | Options | Default | Description |
|----------------------------------|--|------------|--|
| Supervisor Password is: | | Clear | A display-only field. Set is displayed when the system Supervisor Password is set and Clear when it is not. |
| User Password is: | _ | Clear | A display-only field. Set is displayed when the general User Password is set, and Clear when it is not. |
| Set Supervisor Password | [Enter] | [Enter] | Sets, changes or cancels Supervisor Password. The Supervisor Password may be up to eight characters long and include only letters or numbers (no symbols). Passwords are NOT case-sensitive. To cancel a password press the Enter key instead of entering characters in the Enter New Password field and in the Re-enter New Password field. When a Supervisor Password is set it must be used to access the BIOS setup utility. |
| Set User Password | [Enter] | [Enter] | This field can only be accessed if the Supervisor Password is set. Sets, changes or cancels the User Password. The User Password may be up to eight characters long and must include only letters or numbers (no symbols). Passwords are NOT case-sensitive. To cancel a password press the Enter key instead of entering characters in the Enter New Password field and in the Re-enter New Password field. When a User Password is set it must be used to access the BIOS setup utility. |
| Minimum User Password Length: | [0] | [0] | Sets the minimum length for User Password. |
| Password on Boot: | DisabledFirst BootEvery Boot | [Disabled] | When Enabled, a password (User or Supervisor) is required after the Power On Self Test (POST) before the operating system will be read from a disk. When set to Disabled no password is required. If no Supervisor Password is set this feature is not available and no password is required. |
| On Automatic Wake up: | DisabledEnabled | [Disabled] | This field is active only when Password On Boot is set to First Boot or Every Boot. When disabled, password entry is not required on automatic wake up on LAN or Real Time Clock. When enabled, the password is still required on automatic wake up. |
| Boot from Removable Media: | AllSupervisor only | [All] | Selecting Supervisor Only allows supervisor access only. |
| Flash Write: | DisabledEnabled | [Enabled] | When set to disabled, the BIOS Flash Memory will be write-protected. |
| Hard Disk Security | _ | | Submenu that allows you to configure hard disk security features. |
| Owner Information | | _ | Submenu that allows you to set Owner information. |
| Security Chip Setting | _ | _ | Submenu that allows you to configure the security chip. |
| Security Panel On Resume | DisabledEnabled | [Enabled] | Allows the Security Panel Feature to be enabled or disabled upon Suspend from Resume. |

Hard Disk Security Submenu of the Security Menu

Figure 15. Owner Information Submenu

Table 15: Fields, Options and Defaults for the Owner Information Submenu of the Security Menu

| Menu Field | Options | | | | Default | Description |
|---------------------------|-------------------|---|--|---|---------|---|
| Owner Information Is: | _ | | | | Clear | Display only. |
| Set Owner Information: | | | | | [Enter] | Field to write owner information (e.g., your name). |
| Foreground Color: | ■ Blue ■ Green | RedMagentaBrownWhite | GrayLight BlueLight GreenLight Cyan | Light RedLight MagentaYellowBright White | [Gray] | Set foreground color. |
| Background Color: | ■ Blue ■ Green | RedMagentaBrownWhite | GrayLight BlueLight GreenLight Cyan | Light RedLight MagentaYellowBright White | [Black] | Sets background color. |

Security Chip Setting Submenu of the Security Menu

The Security Chip Setting Submenu is for enabling or disabling the embedded security chip.

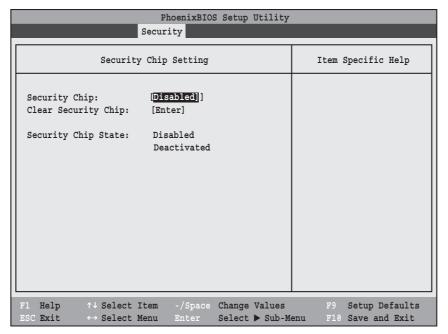

Figure 16. Security Chip Setting Submenu

Table 16: Fields, Options and Defaults for the Security Chip Setting Submenu of the Security Menu

| Menu Field | Options | Default | Description |
|----------------------|--|------------|---|
| Security Chip: | DisabledEnabled | [Disabled] | Allows you to enable or disable the security chip. Note that this is only active if a Supervisor Password has been entered. A reboot is required after exit to configure the Security Chip correctly. Clear Security Chip option becomes selectable after reboot. |
| Clear Security Chip | _ | [Enter] | This field is not selectable until after the security chip is enabled and the system is rebooted. |
| Security Chip State: | _ | | Display only, to indicate the state of the chip if it has been enabled, disabled, activated or deactivated. |

Exiting from the Security Menu

When you have finished setting the parameters on the Security Menu, you can either exit from setup utility or move to another menu. If you wish to exit from setup utility, press the [Esc] key to go to the Exit Menu. If you wish to move to another menu, use the cursor keys.

BOOT MENU – SELECTING THE OPERATING SYSTEM SOURCE

The Boot Menu is used to select the order in which the BIOS searches sources for the operating system. Follow the instructions for Navigating Through the Setup Utility to make any changes. (See Navigating through the Setup Utility on page 2 for more information)

The following tables show the names of the menu fields for the Boot menu and its submenu, all of the options for each field, the default settings and a description of the field's function and any special information needed to help understand the field's use.

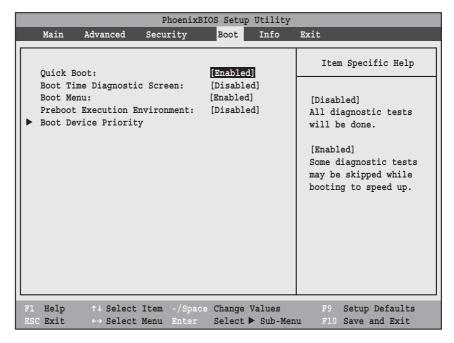

Figure 17. Boot Menu

Table 17: Fields, Options and Defaults for the Boot Menu

| Menu Field | Options | Default | Description |
|-----------------------------------|--|------------|--|
| Quick Boot: | DisabledEnabled | [Enabled] | Turns on and off booting with a truncated set of Power On Self Tests. (Fewer tests mean faster booting.) |
| Boot Time Diagnostic Screen: | DisabledEnabled | [Disabled] | Turns on and off display of test results instead of Fujitsu logo screen during Power On Self Test. |
| Boot Menu: | DisabledEnabled | [Enabled] | When disabled, the [F12] key cannot be used to invoke the Boot menu. When enabled, click the [F12] button to display the Boot menu while booting up. |
| Preboot Execution Environment: | DisabledEnabled | [Disabled] | Turns on and off boot from network server options. |
| Boot Device Priority: | Selects Boot Device Priority submenu | _ | This menu allows setting up the source for the operating system. See "Boot Device Priority Submenu" in the following section. Pressing the [F12] key will also let you choose the boot device. |

Boot Device Priority Submenu of the Boot Menu

The Boot Device Priority submenu is for setting the order of checking of sources for the operating system.

- Be aware of the operating environment when booting from a CD or you may overwrite files by mistake.
- A bootable CD-ROM has either a floppy disk or a hard drive format. When a bootable CD-ROM is used, drive allocations change automatically without changing the BIOS setup. If floppy disk format is used, the CD-ROM becomes Drive A. The CD-ROM will only take drive C: (hard drive format) if the internal hard drive is not present or is disabled. A bootable CD-ROM cannot use a C: designation if a formatted internal hard drive is present since the C: designator is always reserved for the internal hard drive. The boot sequence ignores new drive designations, but your application software will use the new designations.

- In order for a portable USB memory device (e.g., JumpDrive or memory stick) to be recognized in the Boot Device Priority list, it must have been installed before booting the system.
- Note that some older portable USB memory devices may not be recognized as bootable devices.
- The Boot Menu can also be invoked outside of the Setup Utility using the TrustedCore menu or the [F12] key. (See Using the TrustedCore Menu on page 2 for more information)

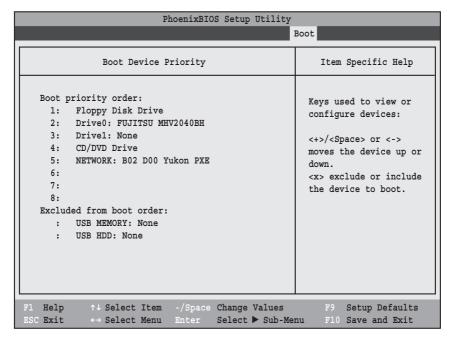

Figure 18. Boot Device Priority Submenu

Table 18: Fields, Options and Defaults for the Boot Device Priority Submenu of the Boot Menu

| Menu Field | Description |
|---|--|
| Boot priority order: 1: Floppy Disk Drive 2: Drive0: 3: Drive1: 4: CD/DVD Drive 5: NETWORK: 6: 7: 8: Excluded from boot order: : USB MEMORY: : USB HDD: | The boot selections determine the order in which the BIOS searches for the operating system during a startup sequence. To change the order, highlight one source by using the [up] or [down] cursor keys and then press the [+] or [-] key to change the order number. Tapping [x] removes from the list a device that is not installed. Tapping [x] on an item in the Excluded list adds the device to the Boot priority list. Be sure to save your changed order when you exit the BIOS setup utility. NOTE: Be aware that if you use the CD-ROM drive as the first boot device, certain files may be overwritten, depending upon your operating environment. |

Exiting from Boot Menu

When you have finished setting the boot parameters with the Boot menu, you can either exit from the setup utility or move to another menu. If you wish to exit from the setup utility press the [Esc] key to go to the Exit menu. If you wish to move to another menu, use the cursor keys.

INFO MENU - DISPLAYS BASIC SYSTEM INFORMATION

The Info menu is a display only screens that provides the configuration information for your tablet.

The following table shows the names of the menu fields for the Info menu and the information displayed in those fields. These fields are for information purposes only, and are not editable.

The information, including CPU type and speed, and total memory, displayed on this screen varies according to the unit you purchased.

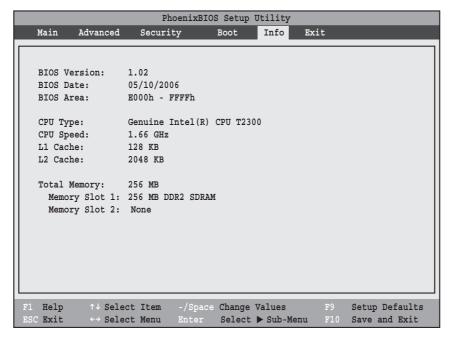

Figure 19. Info Menu

Table 19: Fields, Options and Defaults for the Info Menu

Note that the parameters listed in the following table may be different, depending upon your system configuration.

| Menu Field | Default | Menu Field | Default |
|---------------|----------------------------|----------------|-------------------|
| BIOS Version: | 1.02 | L1 Cache: | 128 KB |
| BIOS Date: | 05/10/2006 | L2 Cache: | 2048 KB |
| BIOS Area: | E000h – FFFFh | Total Memory: | 256 MB |
| СРИ Туре: | Genuine Intel(R) CPU T2300 | Memory Slot 1: | 256 MB DDR2 SDRAM |
| CPU Speed: | 1.66 GHz | Memory Slot 2: | None |

EXIT MENU – LEAVING THE SETUP UTILITY

The Exit Menu is used to leave the setup utility. Follow the instructions for Navigating Through the Setup Utility to make any changes. (See Navigating through the Setup Utility on page 2 for more information). The following table shows the names of the menu fields for the Exit menu, the default settings and a description of the field's function and any special information needed to help understand the field's use.

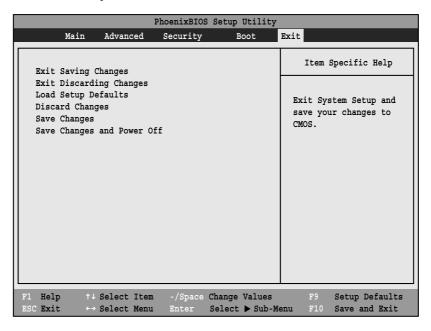

Figure 20. Exit Menu

Table 20: Fields, Options and Defaults for the Exit Menu

| Menu Field | Description |
|----------------------------|---|
| Exit Saving Changes | Exit Saving Changes and Exit will store all the entries on every menu of the setup utility to the BIOS memory and then exit the setup utility. A confirmation message Save Configuration changes and exit now? [Yes] [No] will be displayed. |
| Exit Discarding Changes | Selecting Exit Discarding Changes and Exit will exit the setup utility without writing to the BIOS memory. When the BIOS recognizes this selection it will load the operating system and begin operation. |
| Load Setup Defaults | Selecting Load Setup Defaults will load the factory preset default values for all menu fields, then display the message Load default configuration now? [Yes] [No]. When confirmed the setup utility will return to the Exit Menu. To return to another menu follow the directions in the Navigating Through the Setup Utility Section. |
| Discard Changes | Selecting Discard Changes will load the previous values in BIOS memory for all menu fields. The message Load previous configuration now? [Yes] [No] will be displayed. When confirmed the utility will return to the Exit menu. To return to another menu, follow the directions in the Navigating Through the Setup Utility Section. |

Table 20: Fields, Options and Defaults for the Exit Menu

| Menu Field | Description |
|-------------------------------|---|
| Save Changes | Selecting Save Changes causes the new settings in all menus to be written to the BIOS memory. The message Save configuration changes now? [Yes] [No] will be displayed. When confirmed, the setup utility will return to the Exit menu. To go to another menu, follow the directions in the Navigating Through the Setup Utility section. |
| Save Changes and Power Off | Selecting Save Changes and Power Off will cause the new settings in all menus to be written to the BIOS memory, then power the system off. The message Save configuration changes now and power off? [Yes] [No] will be displayed. When confirmed, the setup utility shut down the system. |
