

Are your business-critical applications secure?

By 2009, 60% of IT organisations will make application security vulnerability detection an integral part of their SLC processes.*

SUMMARY OF KEY FACTS

Solution

Application Security Vulnerability Assessment

Key deliverables

- Identification of application and supporting environment's vulnerabilities and mis-configurations
- Identification of areas of code that can be improved to enhance security (optional)
- Recommendations concerning security vulnerabilities and ways to tackle these issues.

Benefits

On implementation of the assessment's recommendations:

- Business-critical applications are secure, ensuring no loss of productivity, confidence or money
- Risks of compromise of the organisation's assets and business objectives are greatly reduced
- Your organisation embeds security into your business strategy protecting you from future threats.

Client Challenge

Your organisation's business objectives are supported and enabled by several key applications. These can include systems like e-mail, inventories or CRM solutions. Vulnerabilities in these business-critical applications can put your organisation at risk and could result in loss of productivity, confidence or money. The situation is made more challenging by the increasing complexity of such systems and the lack of awareness of secure development practices.

Fujitsu's Solution

Fujitsu's Application Security Vulnerability Assessment Service assists your organisation to determine whether an application is dependable; that is, it does not introduce (un-)intentional vulnerabilities in a bounded or unbounded network environment. The Application Assessment provides a focused code review (optional) and a vulnerabilities assessment of your chosen application and supporting environment to identify security weaknesses and configuration issues.

Benefits

Threats can affect many facets of your organisation, including your information, IT Systems and even your reputation in terms of customer confidence. Fujitsu's Application Security Vulnerability Assessment Service assists your organisation to ensure your business-critical applications can resist, recognise and recover from security threats. Another important benefit is that your organisation can embed security into its business strategy, protecting against future threats.

Our Approach

With your assistance, the Assessment delivers in 4 – 6 weeks elapsed (effort may be less), an evaluation of your organisation's business-critical applications and a set of pragmatic recommendations based on your requirements and context. You will get clarity on what needs to be done, what is involved and recommendations on how to begin.

Our Expertise

Fujitsu designs, implements, tests and manages large security projects for security-conscious organisations in Ireland and around the world. Some Irish clients include The Department of Defence and the Health Protection Surveillance Centre. We have the specialised skills and tools to assist your organisation in securing your applications.
