

Reduce ownership cost of your PC and Mobile assets

Gartner: annual system-management spend per workstation averages US\$8-10K over its 5-year life.

Client Challenge

For large organisations, the estate of desktop PCs, laptops, mobile devices and software is perhaps the most difficult set of assets to manage effectively. Total cost of ownership (TCO) continues to grow. Management and administration of hardware variants, software images, application versions and software licences are increasingly complex and expensive. Organisations need to investigate ways to balance these demands with the need to reduce costs and improve efficiency of the estate, while maintaining security.

Fujitsu's Solution

Fujitsu can help your organisation address these challenges through our PC/Mobile Infrastructure Review Service. This starts with a short analysis of the current asset base using centralised, agentless asset-discovery tools. The service uses gap-analysis to provide PC/Mobile asset-management recommendations. Acting on these recommendations will help your organisation streamline its asset-management processes, eliminate security exposures and reduce costs.

Benefits

Typical cost-reduction opportunities identified include:

- Software licensing
- Asset management
- Rationalisation of hardware and software
- Streamlined system management processes

The service identifies potential security enhancements and assesses viability for the organisation of energy-saving technologies.

Our Approach

With your assistance, the review delivers, in 4 – 6 weeks elapsed (effort may be less), an assessment of your system management processes and a set of pragmatic recommendations based on your requirements and context. As a result, you will achieve clarity on what needs to be done, what this involves and recommendations on how to begin.

Our Expertise

Fujitsu has extensive experience of providing PC/Mobile infrastructure Review and Implementation projects to Irish customers including the Revenue Commissioners and the Courts Service. We currently manage more than 500,000 desktops and laptops across Europe.

SUMMARY OF KEY FACTS

Solution

PC/Mobile Infrastructure Review Service

Key deliverables

- Analysis of your current estate of PCs and mobile devices
- Identification of potential early cost savings
- Gap-analysis of as-is and to-be PC/mobile infrastructure and management
- Documented recommendations and roadmap for improvement

Benefits

On implementation of the assessment recommendations:

- Cost reduction: rationalisation of hardware, software and licences
- Cost reduction: streamlined system management
- Enhanced data security: data centralisation; encryption of mobile data
- Lifecycle asset management: track and control assets and licences
- 'Go Green': assess and scalability options in the .NET framework.
