

Make informed decisions to prioritise your security investments and better protect your assets

Client Challenge

Strong practical knowledge has been built up and applied over decades in domains such as defence, civil, industrial, home and even sanitary security. Yet organisations often fail to protect their information assets: this is demonstrated by numerous occurrences of highly publicised security incidents. Often, these incidents are the result of investing in, and applying, inappropriate controls to solve what were the organisation's perceived risks. Failure of control causes severe consequences to productivity, customers' trust, compliance and financial resources.

Fujitsu's Solution

Fujitsu's ICT Security Assessment Service helps an organisation identify vulnerabilities in the way it operates its business and weaknesses in relation to best practices, legal and regulatory requirements. This assessment is based on the ISO 27002 industry standard and provides clear recommendations on how to best mitigate the identified issues. These recommendations permit the organisation to prioritise its security investments and, when applied, to improve its posture vis-à-vis security best practices and compliance.

Benefits

Fujitsu's Security Assessment identifies vulnerabilities to the organisation's business and provides appropriate recommendations in the form of actionable items to mitigate these vulnerabilities. It provides a business context to technical risks; after the completion of the assessment, the organisation can decide to prioritise its security investments based on business criteria. Fujitsu's Security Assessment is the first step in mitigating risks. Regular assessments lead to more effective business practices and promote compliance as a by-product.

Our Approach

The Security Assessment is a comprehensive, business-driven, methodology incorporating a review of networks, hosts, applications, information stores, policies and procedures. It takes the form of workshops with key stakeholders, and documentation and assets review. All results and recommendations are delivered in a clear, business contextual presentation.

Our Expertise

Fujitsu designs, implements, tests and manages large security projects for security-conscious organisations in Ireland and around the world. We have the specialised skills and tools to assist your organisation in securing its assets.

SUMMARY OF KEY FACTS

Solution

ICT Security Assessment Service

Key deliverables

- Organisation's vulnerabilities and weaknesses identified
- Provision of recommendations to adequately protect your assets:
 - Based on the ISO 27002 industry standard
 - Identify appropriate controls only
 - Delivered in a clear presentation with actionable items.

Benefits

After completion of the assessment, the organisation:

- Is aware of the risks to its assets and how to mitigate them
- Is able to decide how to best prioritise its security investments.

In the longer term, the organisation is better equipped to:

- Establish the foundations for a more effective business
- Achieve compliance as a by-product.
