

DATACENTRE SERVICES

“Consolidated, secure, efficient...”

MANY ORGANISATIONS ARE SEEING THEIR SYSTEMS AND DATA REQUIREMENTS ESCALATING DUE TO ORGANIC GROWTH, THE RISE IN USE OF THE INTERNET, INTRANET AND EMAIL OR AS A RESULT OF MERGERS OR ACQUISITIONS. With increasing concerns about terrorist threats they are also concerned about the location of their data centres. Increasingly they are asking themselves what value there is in owning and managing their own data centres when there is someone else who can do it for them. And someone who can offer distinct financial and operational advantages as well as much higher levels of security.

Fujitsu has over 30 years experience of designing building and operating systems. It has 47 datacentres worldwide with 85,000 square metres of data hall space. Fujitsu makes the investment in secure, resilient data centres that non-specialist organisations couldn't hope to make on their own.

Cost Savings

The economies of scale Fujitsu provide reduce the cost of corporate systems and enable organisations to extend the services they offer whilst benefiting from improved and consistent IT service levels.

Requirements Tailored

Systems are managed to suit individual user requirements with flexible 24x7 capacity that follows specific business demands. Additional capacity is there when required for organisations with variable business workloads.

Security and Resilience

Corporate systems reside in state of the art facilities, safe from malicious attack. Location within a Fujitsu Datacentre substantially reduces operational risk and the higher levels of security and resilience may reduce corporate insurance premiums.

Mobile Working

With corporate applications and data hosted at a Fujitsu data centre staff can securely access everything they need from wherever they may be.

Monitoring

The Fujitsu Infrastructure Management Centre monitors network traffic 24x7 and ensures that the agreed quality of service is achieved for data and voice networks.

State of the art

Fujitsu's latest UK datacentre is one of the finest in the world. In a discreet location on the outskirts of London, everything has been done to provide non-stop computing:

- An architecture that builds two of everything
- Proactive monitoring from dual locations
- Technology that automatically adjusts bandwidth according to traffic
- Backup generators providing over 48 hours full-load power
- Oxyreduct system to reduce chance of fire
- VESDA smoke detection
- Argonite fire suppression
- 24x7 security and CCTV
- Electric fencing, trembler alarms and anti ram devices

Biometric fingerprint access to all secure areas

Economics of Scale

Clients come to Fujitsu because size does matter. Fujitsu draws upon the experience of running corporate systems for all business sectors with over 100 Blue Chip and Government clients in the UK alone and many more across the world.

The vendor neutrality of Fujitsu's service business ensures that Fujitsu utilises the systems most appropriate to its client's requirements.

By utilising Fujitsu's resources organisations can readily expand or contract their operations in line with business requirements. Costs are flexible and predictable. And dedicated account managers provide a proactive service to ensure that developing and future requirements are managed ahead of demand.
