

# SELF SERVICE INNOVATION

*The U-Scan Genesis Self-Checkout Solution from Fujitsu*

The new U-Scan Genesis™ is completely re-engineered to meet customers' needs for simple, fast and efficient transactions while providing maximum flexibility, space savings and reliability. The unique design of the U-Scan Genesis makes it highly adaptable to your stores' own requirements – today and tomorrow.

## Scalable by Design

Because your retail business is ever changing, the U-Scan Genesis offers a modular design that makes it simple – and cost effective – for you to reconfigure or expand your self-checkout area, depending on customer demand and your operational needs.

**Bagging Stations** – Varying capacities, including one-, two- and four-bag configurations are available to accommodate your customers' basket sizes.

**Cash Dispensers** – U-Scan Genesis offers a choice of either highly reliable coin canister dispensers or high capacity hoppers.

**Scanning Technology** – To complement your front-end equipment, U-Scan Genesis can be installed with the bi-optic scanner/scale of your choice.

## Optimise your U-Scan

With several models to choose from, retailers large and small can find a unit that suits their needs. U-Scan can easily be upgraded to a different capacity model as your self-checkout needs change.

- **U-Scan 1** – The single bag unit is perfect for small retail outlets, convenience stores, pharmacy and discount retailers in both standard and express lane configurations
- **U-Scan 2** – The dual bag model works well in almost any retail store environment, where both bagging capacity and overall space savings are critical
- **U-Scan 4** – The four bag system is perfect for higher volume supermarkets and mass merchandise retailers in both flat and tiered bag scale versions, the space needed is less space than most popular 3 bag systems
- **U-Scan 6** – The six bag system is perfect for higher volume supermarkets and stores where a large basket/weekly shop is commonplace. For easy of use, and to minimise the space required, the 6-bag system is mounted on a revolving carousel.
- **U-Scan Payment Kiosk** - The Payment Kiosk has no scanner or bagging platters. It is a small footprint unit for making payments only using cash; and - via existing EFT systems - credit or debit cards.

## DATASHEET

# U-SCAN GENESIS SELF-CHECKOUT

### Reliable Performance

With its Direct Mode feature, the U-Scan provides exactly the same user interface and functionality as your existing Point-of-Sale software application, meaning there is no additional training needed for your cashiers. The U-Scan also comes with an uninterruptible power supply; (UPS) providing safe and clean standby power. In the event of electrical mains power disruptions, there will be no lost transactions, voids or frustrated customers.

### B-Pad Mobile Attendant Terminal

Save even more space by using the B-Pad handheld terminal, a powerful, lightweight wireless device that performs the same functions as the fixed location attendant station. The B-Pad offers easy to use fully – integrated software and allows cashiers to interact more freely with self-checkout customers to provide faster assistance.

### Customer Driven Improvements

U-Scan Genesis incorporates significant design improvements that make self-checkout simpler. All cash and coin accepting and dispensing is located together above the scanner, which speeds up the transaction process and reduces the likelihood of customers leaving money behind.

### U-Scan Security

- Artificial intelligence-based security algorithm
- Weigh scale under bag rack detects un-scanned items
- Video camera and cashier surveillance
- Electronic Article Surveillance (EAS) scanner option

### Easy to Service

The U-Scan maintenance need not tie up your self-checkout lanes for long periods of time. Easy serviceability enables your store staff to solve most maintenance issues quickly to minimise customer disruptions and reduce service costs.

### Multi-Language Support

The U-Scan Genesis is available in a multitude of languages for both onscreen content and audio guidance; with the ability to switch languages in mid-transaction. This is a powerful option in diverse markets when the attendant and customer may speak different languages.
