Service Processor Manager (SVPM)

SVPM

Service Processor Manager																
Model Name	200	300	400	500	600	700	800	900	1000	1100	1200	1300	1400	1500	1600	
Number of clusters	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	
Number of CPUs in cluster	1 to 12 units/cluster															
S V P M	Structure	Duplexing configuration (SVPM0, SVPM1)														
	Number of consoles	2 to 5 units/SVPM														
	Number of panels on a console	1 to 2 units/SVPM														
	Power control	SCCI (max. 504 units), PPC (max. 504 units)														
	Device control board	0 to 1 ports														
	Connection point notification boards per cluster.	Special (input 2, output 9), common (input 24, output 24), 6 boards per cluster.														
	Reception of standard time	Option														
	Automatic power restoration	Standard														
	Dual system power receivers	Option														
	ARMSS, FST	Each board (for maintenance)
