

Application Development / Maintenance and Support Services

Service Description

Fujitsu provides you the best options in order to assist you to develop and maintain applications. We offer various types of application development services ranging from building custom program on top of a standard package to a complete custom-build solution.

After we hand over the system to customers, we provide post-implementation services to support the end-users and ensure the system maintains in a good working condition. The maintenance and support services we provide also cover other third parties' systems.
