Notes on SATA HDD

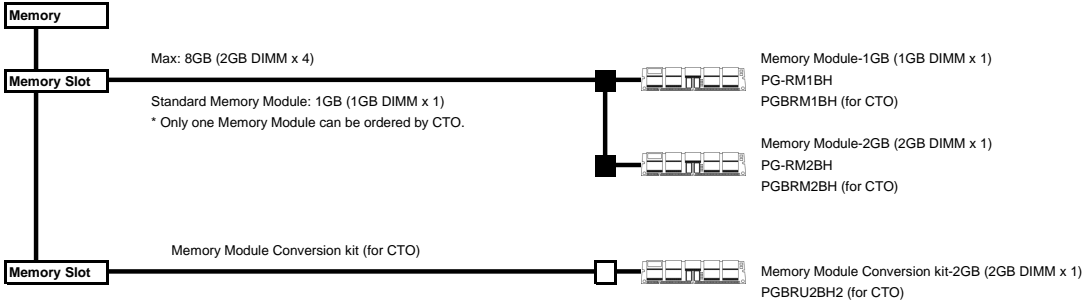

1. RX100 S5 (3.5inch SATA model) can be used on a small scale without frequent data access about eight hours a day, for five years.
2. If you would like to use server 24 hours a day, every day, or for database with frequent data access, or for mission-critical tasks which require high reliability, please purchase another SAS model.
3. Please backup data on a regular basis to prevent loss of data.
4. Dump function of Linux is not available for RX100 S5 (3.5inch SATA model). If you would like to use dump function of Linux, please purchase another SAS model.

*. Notes on installing memory

1. Memory is installed by one or more DIMMs.
2. The memory capacities of the slots should be in ascending order in the following sequence:
1A -> 1B -> 2A -> 2B
3. Available memory capacity depends on the type of OS and some memory area is used for PCI resource management.
The following table shows installed memory capacity and available memory capacity.

OS	Installed Memory Capacity	Available Memory Capacity
Windows Server® 2008 Standard (32-bit) Windows Server® 2003 R2, Standard Edition (SP2) Windows Server® 2003, Standard Edition (SP2)	~2.0GB 2.0GB~4.0GB	Same as installed memory capacity 2.0GB *1
Windows Server® 2008 Standard (64-bit) Windows Server® 2003 R2, Standard x64 Edition (SP2) Windows Server® 2003, Standard x64 Edition (SP2) Red Hat Enterprise Linux ES (v.4 for x86) Red Hat Enterprise Linux 5 (for x86) Red Hat Enterprise Linux ES (v.4 for EM64T) Red Hat Enterprise Linux 5 (for Intel64)	~8.0GB	Same as installed memory capacity

*1. If installed memory capacity is more than 2.0GB, it is necessary to set "PAE (Physical Address Extension)" of OS.
The following (1) and (2) are the ways to set "PAE" of OS, and Fujitsu recommends (1).

- (1) Set "PAE" of OS.
Regarding setting "PAE" of OS, please refer to website of Microsoft.
- (2) Set "DPE (Data Execution Prevention)" of CPU.
If "DPE" of CPU is set as "available" by executing the following procedure, "PAE" of OS is set automatically.
 - [1] Execute "BIOS setup utility".
 - [2] Select "Advanced" menu.
 - [3] Select "Advanced Processor" submenu.
 - [4] Set "NX Memory Protection" as "Enabled".
