

SAP Discovery System for Enterprise SOA Powered by PRIMERGY TX300 S4

A complete Fujitsu solution to evaluate enterprise SOA.

Businesses are facing increased demands to cut total cost of ownership TCO and increase flexibility dramatically. To capitalize on all the benefits that enterprise SOA (Service Oriented Architecture) affords your business, you will need a flexible, high performance infrastructure. Most importantly, you need a proven path to get you there. The SAP Discovery System for enterprise SOA is a packaged solution that provides you a ready to use SOA environment that you can test drive today.

Solution Overview

The delivered SAP Discovery System for enterprise SOA system is a fully configured and pre-installed environment, and offers an out-of-the-box starting point for unleashing the power of enterprise SOA - a faster, more flexible way to adapt and innovate business processes.

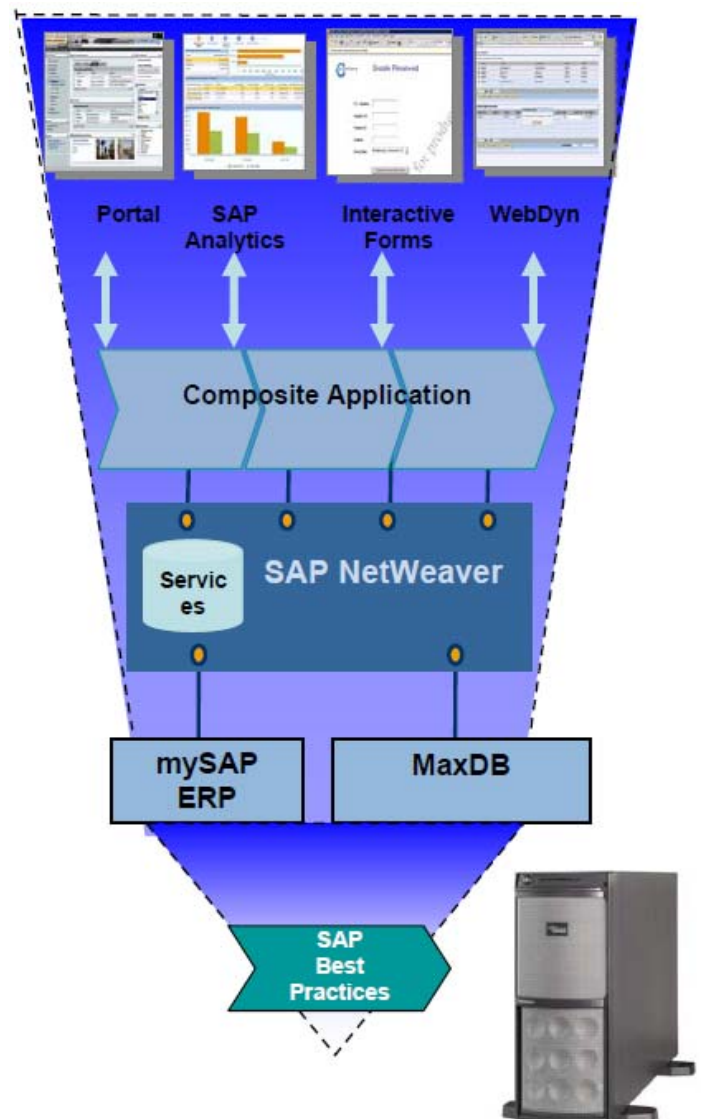

The Fujitsu powered SAP Discovery System leverages industry-leading technology specifically designed to optimize SAP NetWeaver®. Running on Fujitsu PRIMERGY TX300 S4 servers with innovative 64-bit Intel® Xeon™ processors, this system is ready to run in environments like prototyping, development, and learning at your fingertips.

The Fujitsu solution for the SAP Discovery System for enterprise SOA includes:

- Fujitsu Siemens PRIMERGY TX300 S4 server with one Quad-Core Intel® Xeon® 5420 series CPU 2.50 GHz, 12 GB ECC RAM, CD-RW/DVD-ROM, 6 x 500GB SATA HD, RAID1 and RAID 10 and with RAID5 option included, BBU, 2 10/100/1000 Mbit/s Ethernet ports
- Microsoft Windows® Server 2003 R2 SP2, Enterprise Edition (OEM) with 25 CAL
- SAP™ ERP 6.0 and SAP NetWeaver 7.0 (SAP licenses not included)
- Pre-installation
- System inspection service coupon
- Handy way to reload factory and personal settings

Aligning Enterprise services and IT

Customers, systems integrators (SIs), and independent software vendors (ISVs) can quickly gain insight into the value of aligning the IT approach of SOA with business process requirements through the use of standards-based enterprise services - web services that provide defined business logic. Enterprise services are the essential building blocks for business process flexibility, providing reusable pieces of application functionality that can be rapidly composed to form new or enhanced business processes.

Building complete, Service-Oriented Architecture infrastructures with Fujitsu Siemens solutions

Fujitsu with SAP provides you with a preinstalled system which allows you to accelerate your team's learning and experience. The complete composite application code is provided. You will gain skills and experience which will enable you to cut your time to value of enterprise SOA. This package comes with a feature that allows you to easily go back to you initial factory delivery setting once you require to do so while testing or training.

The PRIMERGY TX300 S4 can be used twofold as a floor stand system as well as a rack mount server (options kit required)

Powered by PRIMERGY TX300 S4

- Floorstand version with one Quad-Core Intel Xeon DP 5420 (2.50GHz/2x6MB SLC ECC protected, 1333 MHz FSB) processor
- Integrated Remote Management Controller iRMC S2
- ServerView and ServerView RAID
- 2 Onboard Gigabit Ethernet LAN Ports
- RAID 0, 1, 5 controller with 256 MB cache and BBU
- 12 GB FBD667 PC2-5300F ECC RAM
- CD-RW/DVD-ROM SATA
- 6 SATA HD 500GB 7.2krpm hot-plug 3.5-inch
- HDD box offers 2 additional bay's for 3.5-inch HDDs
- Microsoft Windows Server 2003

No power cord is included.

Options

Options ship unbundled and may be ordered separately

- Power Cord
- Conversion Kit Floor → Rack
- Additional CALs for the Microsoft Windows Server operating system

User Interface

English

Documentation

English documentation is included in the SAP Discovery System for Enterprise SOA binaries.

Installation

This Fujitsu system is preinstalled with software. The ESA Discovery Quick Guide provides the information you need to install, load and run the SAP Discovery System for enterprise SOA. It also explains how to do basic troubleshooting.

Do Not Install with ServerStart

Do not use ServerStart unless you wish to delete the SAP Discovery System for Enterprise SOA. Discovery media for the SAP Discovery System for Enterprise SOA are not available. ServerStart may be used only if you wish to reuse the SAP Discovery System for Enterprise SOA Powered by Fujitsu PRIMERGY TX300 S4 as an all round PRIMERGY TX300 S4 server system. You may wish to do so after you have completed the evaluation of the SAP Discovery System for Enterprise SOA.

SAP Discovery System Licensing Options

The SAP Discovery System is licensed for non-production use only. It can be used for evaluation, test and demonstration, proof of concept or other similar purposes only. Users should obtain a license for the SAP software (e.g. SAP ERP 6.0 and SAP NetWeaver 7.0) on the SAP Discovery System based on the following:

Existing SAP ERP or SAP Business Suite Customers:

Request an evaluation license from SAP Service Marketplace (<http://service.sap.com/licensekey>), or request to transfer one of your existing full use licenses to the SAP Discovery System via SAP Service Marketplace.

Existing ISV and SI Partners: Request to transfer one of your existing SAP ERP Test & Demo licenses over to the Discovery System via SAP Service Marketplace

(<http://service.sap.com/licensekey>), or consult with your SAP Account Executive about purchasing a SAP ERP Test & Demo license if you do not already have one.

New Customers, or ISV and SI Partners: Consult with your SAP Account Executive to discuss how you can get an evaluation license. You will also obtain a license key for the Discovery System installation.
