

Perpetual Connectivity Solutions

Streamlined communications

If your retail organization has multiple stores or remote offices, *maintaining efficient bi-directional communication* is undoubtedly a high priority. What if you could dramatically reduce both the costs of managing those networks and the number of carrier relationships you maintain?

It's possible when you partner with Fujitsu Transaction Solutions. With our Perpetual Connectivity Solutions, we *simplify all data and voice network connectivity* between your headquarters and individual stores. We design and manage multiple-carrier, multisite deployments, and offer you a *single point of accountability*.

You can rely on Fujitsu to provide you:

- Centralized troubleshooting
- Trouble-ticket management
- Project managed deployment
- On-site maintenance of customer premises equipment (CPE)
- Consolidated billing of data networking services

In addition, we offer 24/7 realtime monitoring of your network from our Network Operations Center (NOC), and work directly with the carriers to quickly resolve any problems.

Optimum cost/performance

It's not enough to simplify your network; you need to know whether you're achieving the performance you need at the right cost. That's why we provide network throughput and usage monitoring, reporting and analysis to help you optimize your network for best cost/performance.

Other ways we can dramatically lower your costs include redesigning your current point-to-point or frame-relay circuits to Virtual Private Networks (VPNs) and utilizing the Internet as a lower-cost private network transport. We can also offer increased productivity or transaction processing times by upgrading legacy dial-up networks to "always-on" network connectivity thru VPN.

The Fujitsu difference

When you partner with Fujitsu for Perpetual Connectivity Solutions, you receive a full array of services that no single carrier can provide. Because we're a Tier 1 Internet Service Provider (ISP) and FCC licensed as a telecommunications carrier, we can blend the best services and lowest costs from different carriers and providers. And our expertise in the retail market allows us to bring industry specific knowledge to your perpetual connectivity solution.
