

SAP SOLUTIONS

Consulting, Implementation, Optimised IT Solutions, and Managed Services

Fujitsu has a strong track record, a depth of expertise, and a wealth of resources to meet your SAP project needs. As an SAP Global Technology Partner, Global Service Partner and Global Hosting Partner we have the total capability to deliver end-to-end SAP services.

The complete solution

Fujitsu offers a comprehensive suite of SAP services, ranging from initial consultancy through the design, build and ongoing operation of your SAP systems. Our extensive capability comes from the depth of experience in implementation, strategic consulting, infrastructure development and management that we have amassed through the successful implementation and operation of more than 5,500 SAP-based installations worldwide.

By utilising our skills to fully leverage the proven technology that is integrated into SAP and its underlying database system, we can ensure that your systems are deployed in the most efficient way – with minimal cost and risk, but maximum resilience, flexibility and support for your business needs.

SAP services

Fujitsu offers a range of pre-development services that are designed to help you plan your SAP IT infrastructure in the most straight-forward and efficient way.

Consultancy

We have over 1,500 SAP consultants working across the globe, who have access to an extensive collection of SAP tools, engagement best practices, and lessons learned from prior SAP projects.

All of our consultants also have a wealth of experience gained from working on a wide range of implementations and their knowledge and skill set is constantly expanding with each new application – from the first SAP R/3® systems in the 1990s to the latest SAP suite of solutions.

Sizing Services

Using unique tools, our consultants will analyse and configure a SAP IT landscape specifically tuned to your needs. We don't just use checklists. Instead our data is derived directly from your current landscape, allowing us to give precise and customised recommendations about the optimum size and configuration you require.

System Inspection

SAP infrastructures evolve gradually and sometimes this means you can lose track of exactly what your hardware landscape consists of. This makes it difficult to improve infrastructure performance or track down the source of problems to remove bottlenecks. With our System Inspection service we will analyse your complete SAP hardware landscape from data collected directly from your SAP system. As a result, we can quickly provide answers to any questions about your landscape and help pinpoint any issues and plan for growth or SAP upgrades as well.

Discovery System

The SAP Discovery System for Enterprise Service Oriented Architecture (ESOA) is a complete, fully documented system incorporating all of the SAP software components required for developing and delivering serviced based applications. The complete software suite comes completely installed, pre-configured, and ready to go to enable you to try SAP NetWeaver and the latest SAP components risk free.

SAP Upgrades

For organisations that are considering SAP upgrades, either to the latest releases or to add functionality, we can provide prepared detailed documentation, tools and procedures for analysing the impact of upgrading. Our consultants are also extensively trained in the latest releases and have knowledge of the functional deltas and technical know-how involved in upgrading SAP.

SAP solutions

Fujitsu's SAP team can deliver and manage any size of SAP solution, ranging from a single application through to a complete global, enterprise-wide deployment. And by using our proprietary tool, Macroscopic, to control the deployment of large-scale projects Fujitsu can also significantly shorten overall implementation timescales.

Business Solutions

Our breadth of experience enables us to deliver the full range of SAP solutions covering:

- Human Capital Management (SAP HCM)
- Master Data Management (SAP MDM)
- Mobile Infrastructure
- Customer Relationship Management (SAP CRM)
- Composite Applications (xApps)
- SAP NetWeaver
- Business Intelligence (SAP BW)
- Enterprise Portals
- Process Integration (SAP PI).

Implementation Services

We offer the complete suite of SAP implementation services including:

- SAP ESOA Roadmap Development
- ASAP methodology
- ASAP integrated with Macroscopic
- Project Management
- Integration
- Ongoing Support
- Training
- Change Management
- SAP Migration.

SAP Hosting

Fujitsu is a Global SAP Hosting Partner offering hosting services for mission-critical SAP systems. A choice of hosting/outsourcing services can be provided using our state-of-the-art data centre facilities located worldwide.

SAP technology

Mission critical SAP systems require high availability and high performance. To meet precisely these requirements, Fujitsu provides a wide choice for SAP certified platforms.

Proven Hardware

Our servers are also achieving high rankings in the SAP Standard Application SD Benchmark as well as other benchmarks, demonstrating that they have the high performance and reliability necessary to maximise the effectiveness of SAP products.

Adaptive Computing Infrastructure

FlexFrame™ is a radical new Adaptive Computing architecture for SAP environments, which uses the latest business critical computing technology to deliver major cost savings for SAP customers. It is based on a clear division of the IT infrastructure for SAP solutions using well-defined building blocks: computing, control, network, and storage. As such, FlexFrame provides complete flexibility in selecting the right IT components for your business, while also ensuring that they can be integrated quickly, cost-effectively and with minimal risk.

By exploiting the unique dynamic provisioning capabilities of FlexFrame, SAP's Value Prototyping / Centre of Excellence has developed a new System Provisioning methodology that can reduce the time required to design an ESOA landscape by as much as 80% compared to a classical approach.
