

Manufacturing

■ Concept

From product planning to design, development, manufacturing, sales, and support, Fujitsu provides strategic integrated solutions for building next-generation development design and manufacturing environments.

■ Features

Manufacturing Innovation Team

Fujitsu's Manufacturing Innovation Team provides total support for manufacturing business administration, operations, process reforms, operational method improvements, and enhanced efficiency and stronger coordination with development and production. Together with linking all elements of manufacturing and based on the concept "manufacturing without physically making something," the Manufacturing Innovation Team helps shorten development periods and boost quality levels in mass-production, and contributes to its manufacturing industry customers' innovation and management.

Launching Development and Manufacturing on Assignment (EMS/ODM)

With this service, Fujitsu takes on consigned development and manufacturing work for everything from mobile phones and computers to large-scale equipment like supercomputers, servers, and transmission devices. Using the Fujitsu Production System, which applies the company's unique ICT to the Toyota Production System, the service streamlines development and manufacturing tasks.
