It's time to fast forward to mobility

Is your business ready to drive profitability?

shaping tomorrow with you

FUJITSU

Put yourself in the driving seat and take advantage of mobile enterprise applications faster with Fujitsu:

- Make your legacy applications mobile
- Meet the needs of your customers, partners and users
- Increase employee mobility for greater productivity
- Reduce your risk from legacy applications
- Radically reshape IT system management for a fraction of the cost

Mobile technology and modernising Legacy Applications are both within Gartner's top 5 CIO Business and Technology priorities in 2013.

But driving business growth through mobility while delivering the most from IT budgets continues to be a challenge for most organisations. According to VDC research[1], 43% of companies say integrating mobile devices with existing enterprise apps is critical.

Fujitsu Legacy Modernisation Services make it possible for your enterprise to go mobile and leverage the years of investment you have put into your applications assets.

Combining our expertise with powerful Rocket LegaSuite Mobile technology, we can help you build exceptional mobile user experiences with your existing enterprise applications.

Mobilise your enterprise

You understand the power and flexibility that your enterprise systems provide. Now you can deliver these capabilities to your mobile workforce with Rocket® LegaSuite Mobile. You can build mobile web and hybrid mobile applications for iOS, Android, and any mobile browser quickly and affordably, even if you have little or no mobile development experience. Connecting your new mobile app to your enterprise is easy with LegaSuite Mobile's RESTful web services, database and enterprise application connectors. You get mobile apps in less time, with less risk, with Fujitsu's Legacy Modernisation capabilities.

Fast and intuitive development

Mobile application users drive application development. LegaSuite Mobile enables rapid, user-driven development, enabling our development team to work hand-in-hand with your mobile audience to create a useful mobile experience.

Integrate with any enterprise platform

The user experience you want requires secure, reliable integration with your enterprise. Fujitsu's Legacy Modernisation Mobile solution enables you to use your enterprise applications, databases and web services in a mobile environment. We go further than pre-built connectors. We can rapidly create interfaces to any enterprise system, capture only the business logic and data you need, and immediately use it in your mobile app.

The world has gone mobile.
Isn't it time your systems caught up?

Create customised controls and page templates

Like a particular style of button, container, list, or page? We can create custom versions of any page or control and place them on the palette so they are available at any time. We can even edit all properties of the default containers, controls, and pages, providing the control you need.

Deploy anywhere

LegaSuite Mobile applications are based on HTML5, which means you can use them with any modern mobile browser and makes BYOD deployment easier. Using mobile containers, we serve iOS, Android, and Windows Phone platforms with hybrid mobile applications that can be downloaded from enterprise and public app stores. These applications install on the device and integrate with device features like local storage, location services, and the camera. You can also deploy LegaSuite Mobile apps as mobile web applications that users access through their mobile browsers.

BYOD, identity management and data encryption

You already have an enterprise identity management solution. With LegaSuite Mobile, you can extend identify management to your mobile workforce, requiring specific credentials to install or use an application. LegaSuite's unique enterprise application integration features can even secure user-specific access to enterprise systems like mainframes and UNIX systems. LegaSuite does not keep data on the mobile device unless you require it, and all traffic between mobile devices and your supporting enterprise systems can be secured.

Case study

Industry: Retail

Challenge: Bring real-time sales data from enterprise application to tablets

Results: Quickly developed and deployed mobile browser version of merchandising application to tablets for 100 district and regional managers and executives. Enables real-time data access and decision making.

With a shorter time to realisation, lower costs and 95% application conversion, Fujitsu's Legacy Modernisation services can get your enterprise system mobile in a matter of months.

Now you can maximise your sales capacity, minimise your staff costs and mobilise your workforce in the quickest time possible.
