How to connect ScanSnap to one computer via wireless access point

Preparation
Connect the computer to the wireless access point that will be used to connect to the ScanSnap. The following information about the wireless access point is required for connecting the computer and the wireless access point.
- Network name (SSID)
- Security key (password)

The connected network can be confirmed or changed from the following screen.

How to connect
This procedure is applicable if ScanSnap Manager has not been installed into the computer yet. Install ScanSnap Manager from Setup DVD and follow the instructions of the wireless network setup wizard that appears afterwards.
Hint
Be careful not to close the cover (feed guide).
Hint
When the following screen appears, refer to "If the computer has not been connected to the wireless LAN yet"
Follow the procedure 1 to 3 on the screen.

**Hint**

- When Windows firewall notification appears, click [Allow access].

- When you cannot connect ScanSnap, confirm if the ScanSnap and the computer are connected to the same wireless access point. Please note that ScanSnap cannot be connected to the computer via the mobile router or the wireless access point where the privacy separator function cannot be disabled (e.g. public wireless LAN).

**Hint**

It may take some time to display the screen of the successful connection screen depending on the computer performance.
Hint

- When the connection fails even if the ScanSnap and the computer are connected to the same wireless access point, manually connect them with the following procedures:

  1. Right click the ScanSnap Manager icon in the notification area of Windows and select `connect by Wi-Fi`.
  2. Select the ScanSnap from `[connect to:]` list and click the `[connect]` button.

- Restart the wireless access point if you cannot manually connect.

Refer to the Help if you cannot connect the ScanSnap to the computer in spite of doing the above procedures.
Check the scan with the ScanSnap

**Hint**

- With ScanSnap Wireless Setup Tool you can configure the wireless settings for connecting the ScanSnap to the wireless LAN anytime. ScanSnap Wireless Setup Tool is installed with ScanSnap Manager.

How to run ScanSnap Wireless Setup Tool:

1. Connect ScanSnap and the computer via the USB cable.
2. Open the cover (feed guide) to power on the ScanSnap and turn on the Wi-Fi switch.
3. Go to [Start] menu and select [All programs] > [ScanSnap Manager] > [ScanSnap Wireless Setup Tool] (In Windows 8.1/8, go to [Apps] and select [ScanSnap Manager] > [ScanSnap Wireless Setup Tool])
   - ScanSnap Wireless Setup Tool runs.
4. Click the [Wireless Network Setup Wizard] button in the main menu.
   - Wireless network setup wizard runs. It starts with the screen of 4/12.

- It may take some time to run ScanSnap Wireless Setup Tool. If it does not run, restart the computer and run the tool again.
If the computer has not been connected to the wireless LAN yet
