

FUJITSU Software Infrastructure Manager V2.6.0 Infrastructure Manager for PRIMEFLEX V2.6.0

Plug-in and Management Pack Setup Guide

CA92344-3765-05 March 2021

Preface

Purpose

This Setup Guide describes the installation procedure, precautions on usage and information for FUJITSU Software Infrastructure Manager Plug-in (hereinafter referred to as "ISM Plug-in") and FUJITSU Software Infrastructure Manager Management Pack (hereinafter referred to as "ISM Management Pack"). FUJITSU Software Infrastructure Manager (hereinafter referred to as "ISM") is operation and management software that manages and operates ICT devices, such as servers, storages and facility devices, such as PDUS, in an integrated way. ISM Plug-in and ISM Management Pack are Plug-in software that extends the user interface and enables you to use functions of ISM. This Plug-in enables you to operate ISM from vCSA directly.

ISM Plug-ins and virtualization management software described in this guide are displayed below.

Intended Readers

This manual is intended for system administrators, network administrators, facility administrators, and service technicians who have sufficient knowledge of hardware

and software.

Notation in this guide

Notation

Keyboard

Keystrokes that represent nonprintable characters are displayed as key icons such as [Enter] or [F1]. For example, [Enter] means press key labeled "Enter"; [Ctrl]+[B] means hold down the key labeled "Ctrl" or "Control" and then press the B key.

Symbols

Items that require your special caution are preceded by the following symbols.

Describes important information for each subject.

Describes subjects where attention is necessary.

Variables: <xxx>

Represents variables that require replacement by numerical values or text strings in accordance with the environment you are using.

Example: <IP address>

Abbreviation

This document may use the following abbreviations.

Official name	Abbreviation

High Risk Activity

The Customer acknowledges and agrees that the Product is designed, developed and manufactured as contemplated for general use, including without limitation, general office use, personal use, household use, and ordinary industrial use, but is not designed, developed and manufactured as contemplated for use accompanying fatal risks or dangers that, unless extremely high safety is secured, could lead directly to death, personal injury, severe physical damage or other loss (hereinafter "High Safety Required Use"), including without limitation, nuclear reaction control in nuclear facility, aircraft flight control, air traffic control, mass transport control, medical life support system, missile launch control in weapon system. The Customer shall not use the Product without securing the sufficient safety required for the High Safety Required Use. In addition, Fujitsu (or other affiliate's name) shall not be liable against the Customer and/or any third party for any claims or damages arising in connection with the High Safety Required Use of the Product.

To Use This Product Safely

This document contains important information required for using this product safely and correctly. Read this manual carefully before using the product. In addition, to use the product safely, the customer requires understanding the related products (hardware and software) before using the product. Be sure to use the product by following the notes on the related products. Be sure to keep this manual in a safe and convenient location for quick reference during use of the product.

Modifications

The customer may not modify this software or perform reverse engineering involving decompiling or disassembly.

Disclaimers

Fujitsu Limited assumes no responsibility for any claims for losses, damages or other liabilities arising from the use of this product. The contents of this document are subject to change without notice.

Trademarks

Microsoft, Windows, and the titles or names of other Microsoft products are trademarks or registered trademarks of Microsoft Corporation in the United States and other countries.

VMware is a trademark or a registered trademark of VMware, Inc. in the United States and other countries.

All other company and product names are trademarks or registered trademarks of the respective companies.

All other products are owned by their respective companies.

1. ISM Plug-in for SCOM 1.2.2

1.1 Product Summary

Infrastructure Manager Plug-in for Microsoft System Center Operations Manager (ISM Plug-in for SCOM) is designed to extend the user interface of SCOM to enable the use of the functions of ISM from the SCOM console to enhance the efficiency of the infrastructure management. This plug-in software enables you to operate ISM directly from the SCOM console.

1.2 Contents

This product is composed of the following three (3) files:

- · ISMSCOM_INSTALL.exe
- · Readme.txt
- · Readme en.txt

1.3 System Requirements

For information on the SCOM system requirements to operate ISM Plug-in for SCOM, refer to "Support Matrix."

https://support.ts.fujitsu.com/index.asp

Select [Select a new Product] on the above site and enter "Infrastructure Manager" in [Product Search:].

Select [DOWNLOADS] and select the target operating system.

The reference procedures are subject to change without notice.

1.4 Installation Procedures

This section explains installation procedures of ISM Plug-in into SCOM.

1.4.1 Installation Preparation

This section explains installation procedures of ISM Plug-in into SCOM.

Point

 Install OpenSSL into a Windows Server that ISM Plug-in for SCOM will be installed to before execution of the following procedures. Select OpenSSL 1.0.x series.

Ex.) 1.0.1a, 1.0.2a

 If former version has been installed, uninstall the Plug-in and install ISM Plug-in for SCOM 1.2.2.

1.4.2 Store the Install File

Use Remote Desktop to connect to the Windows Server on which you are installing ISM Plug-in for SCOM.

Transfer the install file to an arbitrary directory on the Windows Server of the connection destination by copying and pasting the file.

1.4.3 Execute the Install File

- On the installation destination Windows Server, double-click the install file (ISMSCOM_INSTALL.exe) that has been transferred in "1.4.2 Store the install file".
- 2. Select language for the installation procedures.
- 3. When the preparations are completed, the installation wizard with the message "To continue, select Next" is displayed. Select [Next].
- 4. The EULA is displayed. Read the contents and select [I accept the terms]. Select [Next].
- "Destination Folder" window is displayed. Select [Next] if you do not change the destination. Otherwise, select [Change].
- 6. When [Change] is selected, "Change Current Destination Folder" is displayed. Select [OK] after change.
- 7. The path to the designated folder is displayed on "Destination Folder." Select [Next] after confirmation of the path correct.
- 8. "Ready to Install the Program" window is displayed. Select [Install].
- 9. "InstallShield Wizard Completed" dialog box is displayed. Select [Finish] to end.

1.4.4 Import Management Pack

- 1. Launch the SCOM console.
- 2. On the left pane, click [Administration], right click [Installed Management Packs] and select [Import Management Packs].
- 3. Select [Add from disk] under [Add].

If the online catalog message appears after Step 3, select [No].

- 4. In the install destination folder, select "Fujitsu.InfrastructureManager.mp" from [Management Packs] and click [Open].
- 5. Select [Install].
- 6. After installation is completed, click [Close] to close the window.

1.4.5 Register the Information in ISM Plug-in from Command Prompt

Register the information of ISM and SCOM into ISM Plug-in for SCOM with the command prompt.

- 1. Start [Command Prompt (Admin)] on the Windows Server where ISM Plug-in for SCOM is installed.
- 2. Execute the command below on Command Prompt.
 - <Install destination folder name>\IsmServerConfig.exe
- 3. Follow the directions and enter the information below.

Please enter the IP address or FQDN of ISM Server: <IP address or FQDN of ISM Server>

Please enter the port number of ISM Server : <port number of ISM Server>

Please enter the user name of ISM Server : <user name of ISM Server>

Please enter the password for the user name: <password of ISM Server>

Please enter the user name of SCOM: <user name of SCOM>

Please enter the Alert collection interval (3-525600 or 00:00-23:59): <number >

Please enter the Alert deletion interval (3-525600 or 00:00-23:59): <number >

[INFO] Configuration file was updated successfully.

Do you want to continue? [y/n] : n (end with n)

Set <Alert collection interval> and <Alert deletion interval> for 3 to 525600 minutes or 0:00 to 23:59.

4. Enter the "exit" command to close the window.

To replace the server information, just execute Steps 1 - 4 again.

1.4.6 How to use the ISM Plug-in

- Launch the SCOM console.
- 2. Select [Active Alert] in the left pane and select the designated host in the middle pane. [Alert task] is displayed in the right pane.

In the [active alerts] window, alerts detected via ISM has [InfrastructureManager] as a source.

- * Only the activated monitored items and specified thresholds are going to be detected. The time stamp shown in the Name column is using UTC time, which differs from the time shown in the Created column.
- * For setting up the monitoring items and each threshold value, refer to "User's Guide" "2.3.1 Setting of Monitoring Items and Threshold Values."
- 3. Select [Fujitsu ISM (node)] under [Alert Task]. The ISM Login console is displayed.

Point

If the selected alert is not registered in ISM as a node, an error message is displayed.

4. The designated node information appears after the login.

1.5 Uninstallation Procedure

Uninstallation procedures of ISM Plug-in for SCOM are below.

- 1. Log in to SCOM.
- 2. Select the [Administration] tab.

- 3. Select [Installed Management Packs].
- 4. Right click [Fujitsu Software Infrastructure Manager.]
- 5. Select [Delete] in context menu to delete Management Pack.
- 6. Open Control Panel in Windows Server ISM Plug-in for SCOM was installed to.
- Select [Programs and Features]. [Uninstall or change a program] widow is displayed.
- 8. Right click [Infrastructure Manager Plug-in for Microsoft System Center Operations Manager] on the list.
- 9. Select [Uninstall] on context menu.
- 10. ISM Plug-in for SCOM is removed.

1.6 Precautions

- To use ISM Management Pack, purchase and installation of ISM are required.
 Refer to "User's Guide" for more details. Without installing ISM, this plug-in does not work properly.
- 2. To use ISM Management Pack, installation in advance of and connection to SCOM are required. Refer to the product guides of Microsoft for operations of SCOM.

2. ISM Plug-in for SCVMM 1.2.2

2.1 Product Summary

Infrastructure Manager Plug-in for Microsoft System Center Virtual Machine Manager (ISM Plug-in for SCVMM) is designed to extend the user interface of SCVMM to enable you to use the functions to integrate the infrastructure management of ISM from SCVMM.

This Plug-in software enables you to operate ISM directly from SCVMM.

2.2 Contents

This product is composed of the following three (3) files:

- ISMSCVMM INSTALL.exe
- · Readme.txt
- · Readme_en.txt

2.3 System Requirements

For information on the SCVMM system requirements to operate ISM Plug-in for SCVMM, refer to "Support Matrix."

https://support.ts.fujitsu.com/index.asp

Select [Select a new Product] on the above site and enter "Infrastructure Manager" in [Product Search:].

Select [DOWNLOADS] and select the target operating system.

The reference procedures are subject to change without notice.

2.4 Installation Procedures

This section explains installation procedures of ISM Plug-in into SCVMM.

2.4.1 Installation Preparation

This section explains installation procedures of ISM Plug-in for SCVMM into SCVMM.

Point

- Install OpenSSL into a Windows Server that ISM Plug-in for SCVMM will be installed to before execution of following procedures. Select OpenSSL 1.0.x series.
 - Example: 1.0.1a,1.0.2a
- If former version has been installed, uninstall the Plug-in and install ISM Plug-in for SCVMM 1.2.2.

2.4.2 Store the Install File

Use Remote Desktop to connect to the Windows Server on which you are installing ISM Plug-in for SCVMM.

Transfer the install file to an arbitrary directory on the Windows Server of the connection destination by copying and pasting the file.

2.4.3 Execute the Install File

- On the installation destination Windows Server, double-click the install file (ISMSCVMM_INSTALL.exe) that has been transferred in "2.4.2 Store the install file".
- 2. Select a language for the installation procedures.
- 3. When the preparations are completed, the installation wizard with the message "To continue, select Next" is displayed. Select [Next].
- 4. The EULA is displayed. Read the contents and select [I accept the terms]. Select [Next].
- 5. The "Destination Folder" window is displayed. If you change the destination, select [Change], otherwise select [Next].
- 6. If [Change] is selected, "Change Current Destination Folder" is displayed. Select [OK] after change.
- 7. The path to the designated folder is displayed on "Destination Folder." Select [Next] after confirmation of the path correct.
- 8. "Ready to Install the Program" window is displayed. Select [Install].
- 9. "InstallShield Wizard Completed" dialog is displayed. Select [Finish] to end.

2.4.4 Import Console Add-in

- 1. Log in to SCVMM.
- 2. On the left pane, under [Settings], select [Import Console Add-in] tab.
- [Import Console Add-in Wizard] dialog box is displayed. To enter the path of the add-in, select [Browse].
- In the installation destination folder, select [FujitsuISMVMMPlugin.zip] from [Management Packs], and select [Open.]
- Return to [Select an Add-in] window. Check [Continue installing this add-in anyway] and select [Next.]

🚇 Point

When the message "Because you have started the Administrator Console with explicit Windows credentials, you must restart the Administrator Console to finish importing this add-in." is displayed, select [OK] to close.

- "Confirm the setting" window is displayed. Select [Finish] to end.
- Reboot SCVMM.

2.4.5 Register the Information in ISM Plug-in from Command Prompt

Register information of ISM and SCVMM into ISM Plug-in with command prompt.

- Start [Command Prompt (Admin)] on the Windows Server where ISM Plug-in for SCVMM is installed.
- Execute the command below on Command Prompt. <Install destination folder name>\IsmServerConfig.exe
- Follow the directions and enter the information below.

Please enter the IP address or FQDN of ISM Server: <IP address or FQDN of ISM Server>

Please enter the port number of ISM Server : <port number of ISM Server>

Please enter the user name of ISM Server: <user name of ISM Server>

Please enter the password for the user name: <password of ISM Server>

Please enter the user name of SCVMM: <user name of SCVMM>

[INFO] Configuration file was updated successfully.

Do you want to continue? [y/n] : n (end with n)

4. Enter the "exit" command and close the window.

To reconfigure the server information, just execute Steps 1 - 4 again.

2.4.6 How to use the ISM Plug-in

- Launch the SCVMM console.
- 2. Select [All hosts] in the left pane and right click the host name in the middle pane. Then select [Fujitsu ISM]. Alternatively select the [Fujitsu ISM] tab in the upper right.
- The [Fujitsu SCVMM Plugin] dialog is displayed. When selecting [Profile
 Assignment], the ISM login console is displayed. After login to ISM, the node
 registration screen is displayed.

2.5 Uninstallation Procedure

Uninstallation procedures of ISM Plug-in are below.

- 1. Log in to SCVMM.
- 2. Navigate to [Administration] > [Console Add-in] > [Infrastructure Manager].
- 3. Right click [Infrastructure Manager Plug-in].
- 4. Select [Delete] in context menu to delete the Plug-in.
- 5. Open Control Panel in Windows Server ISM Plug-in was installed to.
- 6. Select [Programs and Features]. [Uninstall or change a program] widow is displayed.
- 7. Right click [Infrastructure Manager Plug-in for Microsoft System Center Virtual Machine Manager] on the list.
- 8. Select [Uninstall] on context menu.
- 9. ISM Plug-in is removed.

2.6 Precautions

- To use ISM Management Pack, purchase and installation of ISM are required.
 Refer to "User's Guide" for more details. Without installing ISM, this plug-in does not work properly.
- To use ISM Management Pack, installation in advance of and connection to SCVMM are required. Refer to the product guides of Microsoft for operations of SCVMM.

3. ISM Plug-in for vCenter 1.3.3

3.1 Product Summary

Infrastructure Manager Plug-in for VMware vCenter Server (ISM Plug-in for vCenter) is designed to extend the user interface of vCenter and enables you to use the functions to integrate the infrastructure management of ISM from vCenter. This Plug-in software enables you to operate ISM directly from vCenter.

3.2 Contents

This product is composed of the following three (3) files:

- · ISMvCenter INSTALL.exe
- · Readme.txt
- · Readme_en.txt

3.3 System Requirements

For information on the vCenter system requirements to operate ISM Plug-in for vCenter, refer to "Support Matrix."

https://support.ts.fujitsu.com/index.asp

Select [Select a new Product] on the above site and enter "Infrastructure Manager" in [Product Search:].

Select [DOWNLOADS] and select the target operating system.

The reference procedures are subject to change without notice.

3.4 Installation Procedures

This section explains installation procedures of ISM Plug-in into vCenter.

3.4.1 Installation Preparation

This section explains installation procedures of ISM Plug-in for vCenter into vCenter.

Point

• Check that the version of OpenSSL installed in vCSA is 1.0.x before the execution of the following procedures.

Example: 1.0.1a, 1.0.2a

If OpenSSL other than version 1.0.x is installed, install version 1.0.x of OpenSSL.

- Register the IP address of <Target Host> in [Registered IP Address] in the [OS] tab
 on the Details of Node screen of ISM.
- Perform the following steps if you are using Google Chrome 85 or later or Mozilla Firefox 81.0.1 or later.

For Google Chrome 85 or later

- 1. Start Google Chrome.
- 2. Type "chrome://flags/" in the URL and press the [Enter] key.
- 3. Change "SameSite by default by cookies" to "Disabled."
- 4. Select the "Relaunch" button at the bottom right of the screen.

For Mozilla Firefox 81.0.1 or later

- 1. Start Mozilla Firefox.
- 2. Type "about: config" in the URL and press the [Enter] key.
- 3. Change "network.cookie.sameSite.laxByDefault" to "false."
- Set the following [Security] and [Privacy] when you use Internet Explorer.
 - > [Security] tab settings
 - 1. Start Internet Explorer 11 and select [Tools] [Internet options].
 - 2. The [Internet options] dialog box is displayed. Select the [Security] tab and select [Custom level...].
 - 3. The [Security Settings Trusted Sites Zone] dialog box is displayed.
 - 4. Go to [Scripting] settings. Select [Enable] for all of the four items, [Scripting of Java applets], [Enable XSS filter], [Active scripting] and [Allow status bar updates via script].
 - 5. Select [OK] and close the [Security Settings-Trusted Sites Zone] dialog
 - 6. Select [OK] and close the [Internet options] dialog box.
 - [Privacy] tab settings
 - Start Internet Explorer and select [Tools] [Internet options].
 - 2. The [Internet options] dialog box is displayed. Select the [Privacy] tab and select [Advanced Settings].
 - 3. The [Advanced Privacy Settings] dialog box is displayed.
 - 4. Set [Accept] for both [First-party Cookies] and [Third-party Cookies].

- 5. Select [OK] and close the [Advanced Privacy Settings] dialog box.
- 6. Select [OK] and close the [Internet options] dialog box.
- 7. Restart Internet Explorer.
- Depending on your using internet browser, the ISM login page may not be displayed correctly due to security settings. Try the following procedures and logging in to ISM again.

Example: Microsoft Internet Explorer

[Internet Options] - [Security] - [Local intranet] - [Sites] - [Advanced] - Add the ISM's URL

3.4.2 Store the Install File

Use Remote Desktop to connect to the Windows Server on which you are installing ISM Plug-in for vCenter.

Transfer the install file to an arbitrary directory on the Windows Server of the connection destination by copying and pasting the file.

3.4.3 Execute the Install File

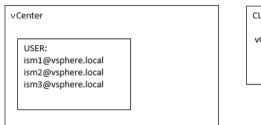

For ISM Plug-in for vCenter 1.3.1 or earlier

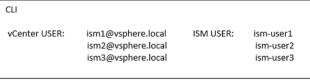

- 1) Execute the ismServerConfig.exe -1 command, and check the registered setting information
- 2) Execute the ismServerConfig.exe -d command, and delete all existing setting information
- 3) Install ISM Plug-in for vCenter 1.3.3

In ISM Plug-in for vCenter 1.3.1 or earlier, settings for each vCenter user and ISM user are required. However, ISM Plug-in for vCenter 1.3.2 has been improved so that it can be set with a combination of vCenter roles and ISM users (*1). This makes it possible to reduce the number of times the ismServerConfig.exe -a command is executed, which used to be executed for the same number of times as the number of vCenter users.

(*1) All users that belong to the vCenter role set as an ISM user can connect to ISM. The image of the connection is as follows.

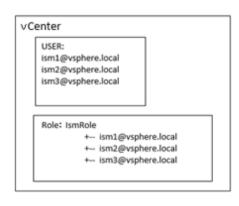

[ISM Plug-in for vCenter 1.3.1 or earlier]

An ISM user setting is required for each vCenter user, that is, three combinations of settings, ism1 and ism-user1, ism2 and ism-user2, and ism3 and ism-user3.

[ISM Plug-in for vCenter 1.3.2 or later]

Not every vCenter user requires an ISM user setting, but every vCenter role requires an ISM user setting. In this case, only one setting, a combination of IsmRole and ism-user1 is required.

vCenter role must be set. Set it according to the following.

"Menu" - "Administration" - "Access Control" - "Roles"

For details, refer to the applicable manual from VMware, Inc.

- 1. Double click [ISMvCenter_INSTALL.exe] and open the file.
- 2. Select language for the installation procedures.
- 3. When the preparations are completed, the installation wizard with the message "To continue, select Next" is displayed. Select [Next].
- 4. The EULA is displayed. Read the contents and select [I accept the terms]. Select

[Next].

- 5. The [Destination Folder] window is displayed. If you do not change the destination, select [Next], otherwise select [Change].
- 6. If [Change] is selected, [Change Current Destination Folder] is displayed. Select [OK] after decision of folder you want to install to.
- 7. The path to the designated folder is displayed on [Destination Folder]. Select [Next] after confirmation of the path correct.
- 8. [Ready to Install the Program] window is displayed. Select [Install].
- 9. [InstallShield Wizard Completed] dialog is displayed. Select [Finish] to end.
- 10. To apply change, reboot the Server that ISM Plug-in for vCenter was installed to.

3.4.4 Register the Information in ISM Plug-in from Command Prompt

Register the necessary information in ISM Plug-in from command prompt.

- 1. Right click the Start menu and select [Command Prompt (Admin)].
- Execute the command below on Command Prompt.
 Install destination folder name>\bin\ismServerConfig.exe -a
- 3. Follow the directions and enter the information below.

<Install destination folder name>\bin\ismServerConfig.exe -a

Welcome to the setup wizard for ISM (Infrastructure Manager). Please enter the following information to register.

Please enter a IP address or FQDN of ISM Server : < IP address or FQDN of ISM Server>

Please enter a Port Number of ISM Server: < Port Number of ISM Server>

Please enter a valid user name of ISM Server : <user name of ISM Server>

Please enter a password for the user name: <password of ISM Server>

Please enter the vCenter role name that should login as <ISM Server user name> you specified above:

<role name of vCenter>

Registration completed successfully

Point

- "Role name of vCenter" for ISM Plugin specified by CLI

 "Role name of vCenter", which is given by a command "ismServerConfig -a", has to be the following.
- · In case a role is created by "Menu" "Administration" "Access Control" "Roles" on GUI of vCenter as new or cloned

Specify the created role name.

· In case pre-defined role is used Specify the name, that is on row "role name" of Table 1, by type of role.

If you would like to assign a role "Administrator" in English environment, role name to give the command is "Admin"

[Table1]

Role name to give the setting	Pre-defined role name on vCenter by		
	language		
	Japanese	English	
Admin	システム管理者	Administrator	
ReadOnly	読み取り専用	Read-only	
AutoUpdateUser	AutoUpdateUser	AutoUpdateUser

VirtualMachineConsoleUser	虚擬機器主控台使用	가상 시스템 콘솔
	者	사용자
InventoryService.Tagging.TaggingAdmin	標記管理員	태그 지정 관리자

Execute the following command to check the registered information.

<Install destination folder name>\bin\ismServerConfig.exe -I
ISM IP address or FQDN=<IP address or FQDN of ISM Server> ISM Port=<Port Number of ISM
Server> ISM account=<user name of ISM Server> vCenter role=<role name of vCenter>

• To correct or replace the server information, delete the information using the following command. Then register the information again.

<Install destination folder name>\bin\ismServerConfig.exe -d

Welcome to the delete wizard for ISM (Infrastructure Manager). Please enter the following information to delete.

Please enter the vCenter role name: <role name of vCenter>

Unregistration completed successfully.

- If vCenter user does not have administrative authority, you must grant "extension" privilege. For the details, refer to the product manual from VMware.
- 4. Execute "exit" to finish.

3.4.5 Install SSL Server Certificate of ISM into Web Browser

It is necessary to import the SSL Server Certificate into the devices to connect to vSphere Web Client (Flash) or vSphere Client (HTML5) in advance.

Refer to "Appendix Import the SSL Server Certificate" regarding the SSL Server Certificate settings.

Without a Certificate, an error message appears.

3.4.6 How to use the ISM Plug-in for vCenter

Use the following procedure to use ISM Plug-in for vCenter.

- Open URL of vSphere Web Client (Flash) or vSphere Client (HTML5) and log in with Web browser.
- 2. Select [Datacenter] or [Cluster], or open [Hosts and Clusters] and select <Target host>.
- 3. Select the [Monitor] tab and select [Infrastructure Manager].

- Register the IP address of <Target Host> in [Registered IP Address] in the [OS] tab on the Details of Node screen of ISM.
- If the message below is displayed on [Infrastructure Manager] tab or nothing is displayed on the [Monitor] tab, the setting of ISM Plug-in may be wrong.

 Reconfigure referring to "3.4.4 Register the information in ISM Plug-in from command prompt."

Access error to Infrastructure Manager

It cannot access Infrastructure Manager via the account of vCenter being logged to in now.

Please do an appropriate setting to access Infrastructure Manager with CLI of Infrastructure Manager for plug-in.

4. After logging in, the following information is displayed according to the object:

For the registered node in ISM:

Node Information

For the unregistered node in ISM/ the datacenter or cluster:

Node List

3.5 Uninstallation Procedure

Uninstallation procedures of ISM Plug-in for vCenter are below.

- 1. Open Control Panel on Windows Server ISM Plug-in was installed to.
- 2. Select [Programs and Features]. [Uninstall or change a program] widow is displayed.
- 3. Right click [Infrastructure Manager Plug-in for VMware vCenter Server] on the list.
- 4. Select [Uninstall] on context menu.
- 5. Restart the Windows Server on which you installed the ISM Plug-in for vCenter.
- 6. ISM Plug-in for vCenter is removed.

3.6 Precautions

- To use ISM Plug-in for vCenter, purchase and installation of ISM are required.
 Refer to "User's Guide" for more details. Without installing ISM, this plug-in does not work properly.
- 2. To use ISM Plug-in for vCenter, installation in advance of and connection to vCenter are required. Refer to the product guides of VMware for operations of vCenter.

4. ISM Plug-in for vCSA 2.0.0

4.1 Product Summary

Infrastructure Manager Plug-in for VMware vCenter Server Appliance (ISM Plug-in for vCSA) is designed to extend the user interface of vCSA to enable you to use functions of ISM on vCSA.

This plug-in software enables you to operate ISM directly from the vCSA.

4.2 Contents

This product is composed of the following three (3) files:

- · FJSVismPlugin-2.0.0.tar.gz
- · Readme.txt
- · Readme_en.txt

4.3 System Requirements

For information on the vCSA system requirements to operate ISM Plug-in for vCSA, refer to "Support Matrix."

https://support.ts.fujitsu.com/index.asp

Select [Select a new Product] on the above site and enter "Infrastructure Manager" in [Product Search:].

Select [DOWNLOADS] and select the target operating system.

The reference procedures are subject to change without notice.

4.4 Installation Procedures

This section explains installation procedures of ISM Plug-in into vCSA.

ISM Plug-in for vCSA installation requires a restart of ISM-VA.

The following items and set ups must be completed before installation:

Activate SSH login on vCSA.

Check the login status via the vCSA web console: [Administration] - [Deployment] - [System Configuration] and select the designated node, [Manage] - [Settings] - [Access] Then check whether SSH login is enabled or not.

- Install a terminal emulator supporting SSH connections.
- Install a FTP client supporting SFTP connections.

Point

- The commands and the messages in a terminal emulator are written in rectangle form.
- The wording of commands may vary depending on the version of the terminal emulator.

4.4.1 Installation Preparation

This section explains installation procedures of ISM Plug-in into vCSA.

Point

 Check that the version of OpenSSL installed in vCSA is 1.0.x before execution of following procedures.

Example: 1.0.1a, 1.0.2a

If OpenSSL other than version 1.0.x is installed, install version 1.0.x of OpenSSL.

- Register the IP address of <Target Host> in [Registered IP Address] of the [OS] tab on the Details of Node screen of ISM.
- Perform the following steps if you are using Google Chrome 85 or later,
 Microsoft Edge 86 or later, or Mozilla Firefox 81.0.1 or later.

For Google Chrome 85 or later

- 1. Start Google Chrome.
- 2. Type "chrome://flags/" in the URL and press the [Enter] key.
- 3. Change "SameSite by default by cookies" to "Disabled."
- 4. Select the "Relaunch" button at the bottom right of the screen.

For Microsoft Edge 86 or later

- 1. Start Microsoft Edge.
- 2. Type "Edge://flags/" in the URL and press the [Enter] key.
- 3. Change "SameSite by default by cookies" to "Disabled."

4. Select the "Relaunch" button at the bottom right of the screen.

For Mozilla Firefox 81.0.1 or later

- 1. Start Mozilla Firefox.
- 2. Type "about: config" in the URL and press the [Enter] key.
- 3. Change "network.cookie.sameSite.laxByDefault" to "false."
- Set the following [Security] and [Privacy] when you use Internet Explorer.
 - > [Security] tab settings
 - 1. Start Internet Explorer 11 and select [Tools] [Internet options].
 - 2. The [Internet options] dialog box is displayed. Select the [Security] tab and select [Custom level...].
 - 3. The [Security Settings Trusted Sites Zone] dialog box is displayed.
 - 4. Go to [Scripting] settings. Select [Enable] for all of the four items, [Scripting of Java applets], [Enable XSS filter], [Active scripting] and [Allow status bar updates via script].
 - 5. Select [OK] and close the [Security Settings-Trusted Sites Zone] dialog box.
 - 6. Select [OK] and close the [Internet options] dialog box.
 - > [Privacy] tab settings
 - 1. Start Internet Explorer and select [Tools]-[Internet options].
 - 2. The [Internet options] dialog box is displayed. Select the [Privacy] tab and select [Advanced Settings].
 - 3. The [Advanced Privacy Settings] dialog box is displayed.
 - 4. Set [Accept] for both [First-party Cookies] and [Third-party Cookies].
 - 5. Select [OK] and close the [Advanced Privacy Settings] dialog box.
 - 6. Select [OK] and close the [Internet options] dialog box.
 - 7. Restart Internet Explorer.
- Depending on your using internet browser, the ISM login page may not be displayed correctly due to security settings. Try the following procedures and logging in to ISM again:

Example: Microsoft Internet Explorer
[Internet Options] - [Security] - [Local intranet] - [Sites] - [Advanced] - Add the

4.4.2 Storing Installation Files in ISM

Transfer the installation files to ISM-VA.

ISM's URL

Forward to: /Administrator/ftp

For information on GUI forwarding, refer to "4.22 File Upload Using the GUI" in "User's Guide."

4.4.3 Applying ISM Plug-in for vCSA

- 1. Connect to ISM-VA with SSH.
 - * Some terminal emulators display security-warning messages, but proceed as it is.
- 2. Log in as administrator user.
- 3. Temporarily stops ISM services for plug-in application.

ismadm service stop ism

4. Execute the plug-in apply command.

5. After applying the plug-in, restart ISM.

ismadm power restart

Point

• To see which plug-ins have been applied, execute the following command:.

```
# ismadm system plugin-show
FJSVismPlugin 2.0.0
#
```

4.4.4 Register Information in ISM Plug-in for vCSA

This section explains procedures to register information of vCSA and ISM to ISM Plugin.

- 1. Connect to ISM-VA with SSH.
- 2. Register information for vCSA to connect to ISM.

```
# pluginmgr config-add -vcip <vCSA IP address>
```

Welcome to the setup wizard for ISM vCenter Plug-in. Please enter the following

information to register.

Please enter a valid user name of ISM Server: <ISM user name>

Please enter a password for the user name: <ISM Password>

Please enter the vCenter role name that should login as <ISM Server user name>you specified above:

<vCSA role name>

Registration completed successfully.

3. Verify the ISM connection settings of the registered vCSA.

pluginmgr config-show -vcip <vCSA IP address>

ISM account= <ISM user name> vCenterrole= <vCSA role name>

ISM account= <ISM user name> vCenterrole= <vCSA role name>

4. Verify the list of registered vCSAs.

pluginmgr config-list-show

vCenter=192.168.1.20 Last Updated = July 26, 2019 1:18 AM

vCenter=BX920#S1 Last Updated = July 26, 2019 1:25 AM

vCenter=BX920#S3 Last Updated = July 26, 2019 3:40 AM

Point

- "Role name of vCSA" for ISM Plugin specified by CLI
 - "Role name of vCSA", which is given by a command "pluginmgr config-add -vcip", has to be the following.
 - · In case a role is created by "Menu" "Administration" "Access Control" "Roles" on GUI of vCSA as new or cloned

Specify the created role name.

· In case pre-defined role is used

Specify the name, that is on row "role name" of Table 1, by type of role.

For "Role name as displayed in GUI", check the appropriate language column in "Pre-defined role name on vCSA by language."

If you would like to assign a role "Administrator" in English environment, role name to give the command is "admin"

[Table1]

Role name to give the setting	Pre-defined role name on vCSA by	
	language	
	Japanese	English
Admin	システム管理者	Administrator
ReadOnly	読み取り専用	Read-only
AutoUpdateUser	AutoUpdateUser	AutoUpdateUser

	者	사용자
InventoryService.Tagging.TaggingAdmin	標記管理員	태그 지정 관리자

 If vCSA user does not have administrative authority, you must grant "extension" privilege. For the details, refer to the product manual from VMware.

4.4.5 Modify Information in ISM Plug-in for vCSA

Describes instructions on how to update vCSA and ISM information already registered with the ISM Plug-in.

Not required for initial installation on vCSA.

- 1. Connect to ISM-VA with SSH.
- 2. Delete information for vCSA to connect to ISM.

pluginmgr config-del -vcip <vCSA IP address>

Welcome to the setup wizard for ISM vCenter Plug-in. Please enter the following information to unregister.

Please enter the vCenter role name: <vCSA role name>

Unregistration completed successfully.

3. Register information for vCSA to connect to ISM.

pluginmgr config-add -vcip <vCSA IP address>

Welcome to the setup wizard for ISM vCenter Plug-in. Please enter the following information to register.

Please enter a valid user name of ISM Server: <ISM user name>

Please enter a password for the user name: <ISM Password>

Please enter the vCenter role name that should login as <ISM Server user name > you specified above : <vCSA role name >

Registration completed successfully.

4. Verify the ISM connection settings of the registered vCSA.

pluginmgr config-show -vcip <vCSA IP address>

ISM account=<ISM user name> vCenter role=<vCSA role name>

ISM account=<ISM user name>vCenter role=<vCSA role name>

5. Verify the list of registered vCSAs.

pluginmgr config-list-show

vCenter=192.168.1.20 Last Updated = July 26, 2019 1:18 AM

vCenter=BX920#S1 Last Updated = July 26, 2019 1:25 AM

vCenter=BX920#S3 Last Updated = July 26, 2019 3:40 AM

6. Execute "4.4.6 Install ISM Plug-in for vCSA in vCSA."

Point

- "Role name of vCSA" for ISM Plugin specified by CLI
 "Role name of vCSA", which is given by a command "pluginmgr config-add -vcip", has to be the following.
- · In case a role is created by "Menu" "Administration" "Access Control" "Roles" on GUI of vCSA as new or cloned

Specify the created role name.

· In case pre-defined role is used

Specify the name, that is on row "role name" of Table 1, by type of role.

For "Role name as displayed in GUI", check the appropriate language column in "Pre-defined role name on vCSA by language."

If you would like to assign a role "Administrator" in English environment, role name to give the command is "admin"

[Table1]

Role name to give the setting	Pre-defined role name on vCSA by	
	language	
	Japanese	English

	者	사용자
InventoryService.Tagging.TaggingAdmin	標記管理員	태그 지정 관리자

 If vCSA user does not have administrative authority, you must grant "extension" privilege. For the details, refer to the product manual from VMware.

4.4.6 Install ISM Plug-in for vCSA in vCSA

1. Execute the plug-in installation command

pluginmgr pkg-install-vcip <vCSA IP address>

Welcome to the install wizard for ISM vCenter Plug-in. Please enter the following information to install.

Please enter a valid user name of vCenter Server: <vCSA user name>

Please enter a password for the user name of vCenter Server: <vCSA Password>

Installation completed successfully.

- 2. Enter the "exit" command to log out of ISM.
- 3. Open the vSphere Client (HTML5) URL in a web browser and log in.
- 4. Select [Administration].
- 5. Select [Solutions] > [Client Plugins].
- 6. Check that the status of "FUJITSU Software Infrastructure Manager Plug-in" is "Deployed/Enabled".

4.4.7 Install SSL Server Certificate of ISM into Web Browser

It is necessary to import the SSL Server Certificate into the devices to connect to vSphere Client (HTML5) in advance.

Refer to "Appendix Import the SSL Server Certificate" regarding the SSL Server Certificate settings.

Without a Certificate, an error message appears.

4.4.8 How to use the ISM Plug-in for vCSA

- 1. Open URL of vSphere Client (HTML5) and log in with Web browser.
- 2. Select or open [Hosts and Clusters] and select <Target Host>.
- 3. Select the [Monitor] tab and select [Infrastructure Manager].

- Register IP address of <Target Host> in [Registered IP Address] of the [OS] tab
 of the Details of Node screen of ISM.
- If the message below is displayed on [Infrastructure Manager] tab or nothing is displayed on the [Monitor] tab, the setting of ISM Plug-in may be wrong.
 Reconfigure referring to "4.4.4 Register Information in ISM Plug-in for vCSA."

Access error to Infrastructure Manager

It cannot access Infrastructure Manager via the account of vCenter being logged to in now.

Please do an appropriate setting to access Infrastructure Manager with CLI of Infrastructure Manager for pluq-in.

4. After logging in, the following information is displayed according to the object:

For the registered node in ISM:

Node Information

For the unregistered node in ISM/ the datacenter or cluster:

Node List

4.5 Uninstallation Procedure

Uninstall the ISM Plug-in for vCSA installed in vCSA. The procedure for uninstalling into vCSA is described below.

4.5.1 Uninstall Plug-ins from vCSA

1. Execute the plug-ins uninstall command.

pluginmgr pkg-uninstall -vcip <vCSA IP address>

Welcome to the install wizard for ISM vCenter Plug-in. Please enter the following information to install.

Please enter a valid user name of vCenter Server: <vCSA user name>

Please enter a password for the user name of vCenter Server: <vCSA Password>

Uninstallation completed successfully.

Point

To confirm the removal of the plug-in, execute the following command.
 Check that the vCSA specified in Step 1 does not exist in the results of the command execution.

pluginmgr pkg-install-list-show

vCenter: 192.168.1.20 Plugin Version: 2.0.0 Last Updated: July 26, 2019 1:18 AM

vCenter: BX920#S1 Plugin Version: 2.0.0 Last Updated: July 26, 2019 1:25 AM

vCenter: BX920#S3 Plugin Version: 2.0.0 Last Updated: July 26, 2019 3:40 AM

4.5.2 Remove a Plug-in from ISM

1. Temporarily stops ISM services f to remove the plug-in.

ismadm service stop ism

2. Execute the remove plug-in command.

ismadm system plugin-del -name <Plug-in name>
Uninstall plugin <FJSVismPlugin 2.0.0>?

[y/n]:

Point

• To determine the plug-in name, execute the following command:.

ismadm system plugin-show FJSVismPlugin 2.0.0

#

- 3. Enter [y] to confirm the plug-in removal.
- 4. After removing the plug-in, restart ISM.

ismadm power restart

4.6 Export Settings

Exports the vCSA and ISM configuration registered with the ISM Plug-in in order to apply the same configuration when rebuilding ISM. The following procedure describes how to export settings.

- Connect to ISM-VA with SSH.
 - * Some terminal emulators display security-warning messages, but proceed as it is.
- 2. Log in as administrator user.
- 3. Execute the export settings command.

pluginmgr config-export -vcip <vCenterIP address> Export config file completed successfully.

4. Enter the "exit" command to log out of ISM.

Point

The exported settings are stored in the FTP area "/ Administrator/ftp".

Retrieve them as needed.

For information on GUI forwarding, refer to "4.22 File Upload Using the GUI" in "User's Guide."

For information on how to transfer using FTP, refer to "2.1.2 FTP Access" in "User's Guide."

Transfer the installation files in binary mode.

4.7 Import Settings

Imports the vCSA and ISM configuration registered with the ISM Plug-in in order to apply the same configuration when rebuilding ISM. The following procedure describes how to import settings.

- 1. Connect to ISM-VA with SSH.
 - * Some terminal emulators display security-warning messages, but proceed as it
- 2. Log in as administrator user.

3. Execute the import settings command.

pluginmgr config-import -vcip <vCenterIP address> Import config file completed successfully.

4. Enter the "exit" command to log out of ISM.

Imported settings will not take effect unless the plug-in is installed in vCSA.

For information on GUI forwarding, refer to "4.22 File Upload Using the GUI" in "User's Guide."

4.8 Export Log

Export the log of the ISM with the ISM Plug-in installed for troubleshooting purposes. The following procedure describes how to export log.

- 1. Connect to ISM-VA with SSH.
 - * Some terminal emulators display security-warning messages, but proceed as it is.
- 2. Log in as administrator user.
- 3. Execute the export log command.

pluginmgr log-export

Export log file completed successfully.

4. Enter the "exit" command to log out of ISM.

The exported log is stored in the FTP area "/ Administrator/ftp".

Retrieve them as needed.

For information on GUI forwarding, refer to "4.22 File Upload Using the GUI" in "User's Guide."

For information on how to transfer using FTP, refer to "2.1.2 FTP Access" in "User's Guide."

Transfer the installation files in binary mode.

4.9 Precautions

- To use ISM Plug-in for vCSA, purchase and installation of ISM are required.
 Refer to "User's Guide" for more details. Without ISM, this plug-in does not work properly.
- 2. To use ISM Plug-in for vCSA, installation in advance of and connection to vCSA are required. Refer to the product guides of VMware for operations of vCSA.

5. ISM Management Pack 1.4.0

5.1 Product Summary

Infrastructure Manager Management Pack for VMware vRealize Operations Manager (ISM Management Pack) is designed to extend the user interface of vROps to enable you to use the functions to integrate the infrastructure management of ISM from the vROps.

This Plug-in software enables you to operate ISM directly from vROps.

5.2 Contents

This product is composed of the following three (3) files:

- · InfrastructureManagerAdapterMP-1.4.0.pak
- · Readme.txt
- · Readme_en.txt

5.3 System Requirements

For information on the vROps system requirements to operate ISM Plug-in for vROps, refer to "Support Matrix."

https://support.ts.fujitsu.com/index.asp

Select [Select a new Product] on the above site and enter "Infrastructure Manager" in [Product Search:].

Select [DOWNLOADS] and select the target operating system.

The reference procedures are subject to change without notice.

5.4 Installation Procedures

This section explains installation procedures of ISM Management Pack into vROps.

5.4.1 Installation Preparation

Decompress the zip file of this product and save InfrastructureManagerAdapterMP-

1.4.0.pak locally.

The [Infrastructure Manager Heatmap] Dashboard requires the following configuration:

Preparing ISM

• The monitoring target node has been registered in ISM and the monitoring setting has been completed.

Refer to "User's Guide" for more details.

5.4.2 Execute the Install File

- Connect to "https://<IP address of vROps>/ui/" and log in by administrator with a Web browser.
- Select [Administration] tab.
- 3. Select [Solutions > Repository] from the left pane. Select [ADD/UPGRADE] button in [Other Management Packs].
- 4. [Add Solution] dialog is displayed. Select the [BROWSE] button. Select the PAK file and select [Open].
- 5. Select the [BROWSE] button. Select the PAK file prepared in "<u>5.4.1 Installation</u>

 <u>Preparation</u>." Select [Open].
- 6. The message "The selected file is ready to upload and install. Select Upload to continue" is displayed. Select [UPLOAD].
- 7. "End User License Agreement" is displayed. Confirm the content of the Agreement. Check "I accept the terms of this agreement". Select [NEXT].
- 8. Installation starts. [FINISH] is displayed in [Installation Details]. Select [FINISH].

5.4.3 Register Information in ISM Management Pack

Register various information of vROps and ISM in the ISM Management Pack.

- 1. Log in to vRealize Operations Manager Web UI.
- 2. Select [Administration] tab.
- Select [Solutions > Other Accounts] from the left pain and select [ADD ACCOUNT] button.
- 4. Select [Infrastructure Manager Adapter] in account type.

5. "New Account" screen opens. Enter the following items displayed in "Cloud Account Information."

Item	Description
Name (imperative)	Input Display Name (ex. ISM Management Pack for vROps)
Description (Optional)	Input Description
Management IP (imperative)	Input IP address of target ISM (ex. 192.168.100.10)
Management Port (imperative)	Input target ISM Port (ex. 25566)

- 6. Select the [Add New] button on the right side of "Credential."
- 7. The "Management Credential" dialog opens. Enter the following information and select [OK].

Item	Description	
Credential name (imperative)	Input Credential name	
	(ex. ISM Management Pack for vROps)	
ISM Username (imperative)	Input username of target ISM	
	(ex. Administrator)	
ISM Password (imperative)	Input password of target ISM	
vRealize Operations Manager	Investment of a DO	
Username (imperative)	Input user name of vROps	
vRealize Operations Manager	Investor a company of a DOW a	
Password (imperative)	Input password of vROps	

- 8. Select [Test connection].
- 9. When the message [Test connection successful] is displayed, select [OK].
- 10. Select [SAVE SETTINGS]. "New Account" screen box closes.

5.4.4 Utilize ISM Management Pack

These are the procedures of checking information about nodes managed by ISM and of troubleshooting by dashboard for the vROps that ISM Management Pack was installed on.

Check a node status by opening ISM from vROps dashbord Using the [Infrastructure Manager] Dashboard

- 1. Log in to vRealize Operations Manager Web UI.
- 2. Select [Dashboards]. Select [Infrastructure Manager] in the left pane.

- 3. Selecting any object displayed in [Host System] in the [Environment Overview] widget displays the configuration diagram in the [Object Relationship] widget, and the graph on the [Metric Chart].
- 4. Select any host system displayed in the [Object Relationship] widget. Select [Details] to go to the detailed screen of the host concerned.

Using the [Infrastructure Manager Heatmap] Dashboard

- 1. Log in to vRealize Operations Manager Web UI.
- 2. Select [Dashboards]. Select [Infrastructure Manager Heatmap] in the left pane. The Heatmap widget is displayed on the left side of the screen. The top -20 widget is displayed on the right side of the screen according to the resource utilization and temperature. (ISM 2.6. 0.020 or later)
- 3. Double-click any object displayed in each widget to go to the detailed screen of the host concerned.

ISM Inventory Tree

Display the inventory tree of the object managed by the Infrastructure Manager Adapter instance. You can also display the details of an object from the objects that are displayed in the inventory tree.

- Select [Environment]. Select [Infrastructure Manager] below [FUJITSU
 Infrastructure Manager] in the left pane to display the Infrastructure Manager
 Adapter instance that was added to [Administration] [Solutions] in the
 [FUJITSU Software Infrastructure Manager] configuration.
- 2. Each object is displayed by drilling down from the Infrastructure Manager Adapter instance. Select [>] in the Infrastructure Manager Adapter instance to display all of the objects just below the instance. You can display the entire inventory tree by selecting the [>] just below each object.
- You can confirm detailed information for objects by selecting the row of an object in the left pane to display detailed information for objects in the right pane.

Troubleshooting using ISM Management Pack

In the vROps environment that ISM Management Pack was installed in, you can easily identify a failed physical host and check its status with ISM. Here is an example of the process from failure occurrence in the physical host to state confirmation.

1. Log in to vRealize Operations Manager Web UI.

- 2. Select "Dashboard" and select "Infrastructure Manager."
- 3. Select the object where the error occurred. A graphic is displayed in the [Object Relationship] widget and a graph in [Metric Chart].
- 4. If you select a failed host from the configuration diagram displayed in the [Object Relationship] widget, a pop-up appears at the top. Select [Details] on the pop-up.
- 5. Selecting [Details] transitions to the environment screen of the host. Select the [Actions] and select [Search Infrastructure Manager for node].
- 6. ISM opens in a new window and automatically transitions to the node screen of the failed host.

5.5 Uninstallation Procedure

Uninstallation procedures are as follows.

Execute following procedure.

- 1. Log in to vRealize Operations Manager Web UI.
- 2. Select [Administration] tab.
- 3. Select [Solutions > Repository] from the left pane.
- 4. Select the [Uninstall] button from [Fujitsu Software Infrastructure Manager] in [Other Management Packs].
- 5. A [WARNING] dialog is displayed. Check [I understand the risk and agree]. Select [OK].
- 6. ISM Management Pack is deleted.

5.6 Precautions

- To use ISM Management Pack, purchase of and installation of ISM are required.
 Refer to "User's Guide" for more details. Without installing ISM, this plug-in does
 not work properly.
- To use ISM Management Pack, deployment in advance of and the availability of vROps are required. Refer to the product guides of VMware for operations of vROps.

6. ISM Plug-in for vRO 1.1.0

6.1 Product Summary

Rolling Offline Firmware Update for ESXi clusters is provided as a function of Infrastructure Manager Plug-in for VMware vRealize Orchestrator (ISM Plug-in for vRO). Specifically, the function enables to update firmware of ESXi hosts in the ESXi cluster offline one by one. When using firmware data, the target firmware is for a server (BIOS/iRMC), and when using eLCM, the target firmware is for a server (BIOS/iRMC/mounted PCI card).

This plug in software enables you to operate ISM directly from the vRO console.

6.2 Contents

This product is composed of the following three (3) files.

- · ollnplugin-fujitsu-ism-fwupdate.dar
- · Readme.txt
- · Readme en.txt

6.3 System Requirements

For information on the vRO system requirements to operate ISM Plug-in for vRO, refer to "Support Matrix."

https://support.ts.fujitsu.com/index.asp

Select [Select a new Product] on the above site and enter "Infrastructure Manager" in [Product Search:].

Select [DOWNLOADS] and select the target operating system.

The reference procedures are subject to change without notice.

6.4 Installation Procedures

This section explains installation procedures of ISM Plug-in into vRO.

6.4.1 Installation Preparation

Decompress the zip file of this product and save "ollnplugin-fujitsu-ism-fwupdate.dar" in the local directory of the management terminal.

When using firmware data and ServerView embedded Lifecycle Management (eLCM), the common required configurations are as follows.

Preparation for ISM

• The target nodes must be registered in ISM For details, refer to "User's Guide."

Preparation for vRO

• A vCenter Server must be added to vRO

For details, refer to the manual of "VMware vRealize Orchestrator."

Preparation for vCenter Server and ESXi

- A vCenter Server must be managing the ESXi cluster
- VMware DRS must be enabled on the ESXi cluster
- VMware vMotion must be enabled on the ESXi cluster
- Virtual machines must be able to be migrated to another ESXi host in the ESXi cluster when enabling Maintenance Mode on an ESXi host in the ESXi cluster

To update the firmware by using the firmware data, the following additional configurations are required.

Preparation for ISM

- The latest version of the firmware for the target nodes must be imported to ISM
- The ServerView Suite DVD and ServerView Suite Update DVD must be imported to the repository area of ISM
- The network settings and BIOS settings of the target nodes must be complete so that PXE boot can be used from the management LAN

• A DHCP server must exist within the network

For details, refer to "User's Guide."

To update the firmware by using ServerView embedded Lifecycle Management (eLCM), the following additional configurations are required.

Preparation for iRMC

- An SD card must be installed on the PRIMERGY server
- An active eLCM license must be registered
- The repository server that is effective for updates can be accessed

For details, refer to the "ServerView embedded Lifecycle Management (eLCM) x.x for iRMC Sx Overview" (where x is the latest version.) on the Fujitsu Manual site below.

https://support.ts.fujitsu.com/

Reference procedure

Select "Select a new Product" - [Browse For Product] and select the server that will struct the eLCM environment.

Download from [Server Management Controller].

Reference procedures are subject to change without notice.

6.4.2 Installation Procedures

Import a dar file to the plug-in section of the VMware vRealize Orchestrator configuration interface.

When using an Orchestrator legacy client based on Java

If the vRO version is 8.0 or later, you cannot use an Orchestrator legacy client that is based on Java. Refer to the procedures for using a vRealize Orchestrator client that is based on HTML5.

.....

- Use one of the following URLs to open the VMware vRealize Orchestrator interface.
 - http://<orchestrator_server_DNS_name_or_IP_address>:8280
 - https://<orchestrator_server_DNS_name_or_IP_address>:8281
- 2. Log in VMware vRealize Orchestrator.

3. When the vRO version is 7.4 or 7.5:

Select the "Open Control Center" link.

When the vRO version is 7.6:

Select the "START THE CONTROL CENTER" link.

- 4. Select the "Manage Plug-in" icon.
- 5. In the "Install Plug-in" section, select "Reference."
- Select the "o11nplugin-fujitsu-ism-fwupdate.dar" file to be installed that has been stored in "6.4.1 Installation Preparation".
- 7. Select "Open."
- 8. Select "Upload."
- 9. Select "Install."
- 10. After executing Step 9, Orchestrator server service will automatically restart in two minutes.

Therefore, you must wait for two minutes until the restart of the service completes before performing Step 11.

11. Log in to the Orchestrator legacy client that is based on Java.

If the restart of the service is not complete, the login may fail.

In this case, wait for a while, and then log in again.

12. Check that "Library" - "Infrastructure Manager" - "HostSvstem" is displayed on the Workflow tree. If it is not displayed, execute "6.4.3 Installation procedures for manual installation."

When using a vRealize Orchestrator client based on HTML5

 Use one of the following URLs to open the VMware vRealize Orchestrator interface.

When the vRO version is 7.4 or 7.5 or 7.6

- http://<orchestrator_server_DNS_name_or_IP_address>:8280
- https://<orchestrator_server_DNS_name_or_IP_address>:8281

When the vRO version is 8.0 or later

- https://<orchestrator_server_FQDN>/vco
- 2. Log in VMware vRealize Orchestrator.
- 3. When the vRO version is 7.4 or 7.5:

Select the "Open Control Center" link.

When the vRO version is 7.6:

- 4. Select the "START THE CONTROL CENTER" link.
- 5. Select the "Manage Plug-in" icon.

- 6. In the "Install Plug-in" section, select "Reference."
- 7. Select the "o11nplugin-fujitsu-ism-fwupdate.dar" file to be installed that has been stored in "6.4.1 Installation Preparation."
- 8. Select "Open."
- 9. Select "Upload."
- 10. Select "Install."
- 11. After executing Step 9, Orchestrator server service will automatically restart in two minutes.

Therefore, you must wait for two minutes until the restart of the service completes before performing Step 11.

12. Log in to the Orchestrator client that is based on HTML5.

If the restart of the service is not complete, the login may fail.

In this case, wait for a while, and then log in again.

13. When the vRO version is 7.4 or 7.5:

Move in the order [Workflows] - [Library].

When the vRO version is 7.6:

Move in the order [Library] - [Workflows].

- 14. Enter "Infrastructure_Manager" in the search field and press the [Enter] key. Confirm that the following eight workflows are displayed. If they are not displayed, execute "6.4.3 Installation procedures for manual installation."
 - Add Rest Host
 - Cluster Offline Update
 - Enter maintenance mode vMotion
 - Exit maintenance mode
 - Offline Update
 - Shut down host
 - enter maintenance mode
 - wait and exit maintenance mode

6.4.3 Installation Procedures for Manual Installation

Some parts of the Workflow package may not be installed by executing the installation procedure in "6.4.2 Installation procedures." In this case, you must install the package file manually.

When using an Orchestrator legacy client based on Java

If the vRO version is 8.0 or later, you cannot use an Orchestrator legacy client that is based on Java. Refer to the procedures for using a vRealize Orchestrator client that is based on HTML5.

.....

1. Change the name of the installation file.

Change the name from "o11nplugin-fujitsu-ism-fwupdate.dar" to "o11nplugin-fujitsu-ism-fwupdate.zip."

- 2. Decompress "ollnplugin-fujitsu-ism-fwupdate.zip."
- 3. Select "Import package..." on the top left in the right pane of the VMware vRealize Orchestrator client workspace.
- 4. Select the package file in the directory "o11nplugin-fujitsu-svs-fwupdate/resources/packages," that was decompressed in Step 2. File name: o11nplugin-fujitsu-ism-fwupdate-package-1.1.0.package
- 5. Select [Open] button.

The "Import package" dialog is displayed.

6. Select [Import] button.

The second "Import package" dialog is displayed.

7. If the checkboxes for all items are not selected, click the [Select/Deselect all] checkbox.

Check that the checkbox for each item has been selected.

8. Select [Import selected elements] button.

The package "com.vmware.library.fujitsuISM.FWupdate" is displayed in the "Packages" view of the VMware vRealize Orchestrator client workspace.

When using a vRealize Orchestrator client based on HTML5

If the vRO version is 7.4, you cannot import a package with a vRealize Orchestrator client that is based on HTML. Refer to the procedures for using an Orchestrator legacy client that is based on Java.

......

1. Change the name of the installation file.

Change the name from "ollnplugin-fujitsu-ism-fwupdate.dar" to "ollnplugin-fujitsu-ism-fwupdate.zip."

- 2. Decompress "ollnplugin-fujitsu-ism-fwupdate.zip."
- 3. When the vRO version is 7.5:

Select [Packages].

When the vRO version is 7.6 or later:

Select in the order [Assets] - [Packages].

- 4. Select the [IMPORT] button.
- 5. Select the following package files in the directory that were deployed in Step 2 (o11nplugin-fujitsu-svs-fwupdate/resources/packages).
 - File name: o11nplugin-fujitsu-ism-fwupdate-package-1.1.0. package
- 6. Select the [Open] button.
 - The "Import com.vmware.library.fujitsuISM.FWupdate package" screen is displayed.
- 7. Select the [Package elements] tab.
 - If the checkboxes for all items are not selected, click the checkbox for each item.
- 8. Select the [Import] button.
 - The package "com.vmware.library.fujitsuISM.FWupdate" is displayed in the "Packages" view in the VMwarevRealize Orchestrator client work space.

6.5 Firmware Update Procedures

Execute Cluster Offline Update Workflow to update firmware. The following shows the procedures to execute Cluster Offline Update.

6.5.1 Start Workflow to Register Information

The following are the parameters to be entered by a user from the Workflow view when executing Cluster Offline Update Workflow.

When using an Orchestrator legacy client based on Java

If the vRO version is 8.0 or later, you cannot use an Orchestrator legacy client that is based on Java. Refer to the procedures for using a vRealize Orchestrator client that is based on HTML5.

1 "VMware configuration" - "vCenter" dialog

Specify the ESXi cluster to which the operation target server belongs for the "Cluster" parameter.

- 1.1 Select the [Not set] button.
 The "Select (VC:ClusterComputeResource)" screen is displayed.
- 1.2 Specify the ESXi cluster to which the operation target server belongs.

 [Note 1]

[Note 1]: If the ESXi cluster is not displayed in the vCenter inventory browser, execute Workflow from "Library" - "vCenter" - "Configuration" - "Add a vCenter Server Instance" in the Workflow tree.

2 "VMware configuration" - "Management Controllers details" dialog Specify the iRMC IP address of the target server and the ESXi host information in the "Settings for particular Hosts which are not configured in vCenter Server" parameter. [Note 2]

[Note 2]: If you registered iRMC information on the "Power Management IPMI/iLO Settings" screen of the ESXi host with vCenter Server in advance, the iRMC IP address and the ESXi host information are retrieved automatically during the Workflow process. The following procedures are not required in this case.

- 2.1 Select the [Not set] button.
 The "Array of Composite Type (iRMC_IPaddress:string,
 ESXi:VC:HostSystem): irmc_credential" screen is displayed.
- 2.2 Select the [Insert value] button to the right of "New value." The "Composite type" screen is displayed.
- 2.3 Enter the iRMC IP address of the target server in "iRMC IPaddress."
- 2.4 Select the [Not set] button below "ESXi."

 The "Select (VC:HostSystem)" screen is displayed.
- 2.5 Select the ESXi host that corresponds to the iRMC IP address that you entered in Step 2.3 on the "Select(VC:HostSystem)" screen, and then click the [Select] button.
 - The "Composite type" screen is displayed, and the information of the ESXi host that you selected on the "Select(VC:HostSystem)" screen is entered in "ESXi" on the "Composite type" screen.
- 2.6 Select the [Define] button. The "Array of Composite

 Type(iRMC_IPaddress:string,ESXi:VC:HostSystem):irmc_credential" screen

is displayed.

In "iRMC IPaddress," the iRMC IP address that you entered in Step 2.3 is displayed.

In "ESXi," the ESXi host information that you selected in Step 2.5 is entered. There is no problem even though "HostSystem" is displayed on the screen.

- 2.7 Repeat Step 2.2 to Step 2.6 for the number of target servers.
- 2.8 After executing Step 2.7, select the [Accept] button on the "Array of Composite
 - Type(iRMC_IPaddress:string,ESXi:VC:HostSystem):irmc_credential" screen. The "Management Controllers details" dialog is displayed.
- 2.9 In the "Settings for particular Hosts which are not configured in vCenter Server" parameter, the IP address and the ESXi host information of the operation target iRMC are displayed as "Array [Properties]."

If there is an error in the iRMC IP address of an iRMC server that is turned off and the ESXi server is turned off, the firmware update on the iRMC server with the incorrect IP address will be successful.

To avoid this, note that you must be careful when you enter an IP address for iRMC and ESXi host information.

- 3 "VMware configuration" "Settings for Management Controller" dialog Specify "Yes" or "No" for "If "Yes": no user interaction when changing to maintenance mode."
 - Yes
 The ESXi host is set in Maintenance Mode automatically during the execution of the Workflow.
 - No

You must specify whether to allow the ESXi host to be set to Maintenance Mode during the Workflow in a dialog.

If specify "No" in a dialog, proceed to next ESXi host without entering Maintenance Mode.

After 5 minutes passed without specifying, specified "No" automatically.

The "Timeout to wait for completion of maintenance mode. (minutes)" parameter is the timeout value for the Maintenance Mode on the ESXi host.

4 "VMware configuration" - "Timeouts" dialog

The "Connection Timeout (seconds)" parameter is the timeout value for the communication connection that is used in the Workflow. The value is displayed in seconds.

The "Operation Timeout (seconds)" parameter is the timeout value for the communication process that is used in the Workflow. The value is displayed in seconds.

5 "Infrastructure Manager configuration" dialog

Input values for each item are as follows.

Parameter name	Default	Description
Infrastructure Manager	None	Specify an IP address for ISM or
address (IP or FQDN)		an FQDN.
Infrastructure Manager port	25566	Specify a port number for ISM.
Infrastructure Manager user	None	Specify a login user name for ISM.
Infrastructure Manager	None	Specify a login password for ISM.
password		
If "Yes": the certificate is	No	Specify "Yes" or "No."
accepted silently and the		If you specify "Yes," an ISM
certificate is added to		certificate will be imported into
the trusted store		vRO automatically.
		If you specify "No," a confirmation
		dialog will be displayed when an
		ISM certificate is imported into
		vRO.
Verify whether the target hostname matches the	Yes	Specify "Yes" or "No."
names stored inside the		If you specify "Yes," the Workflow
server's X.509 certificate		verifies whether the ISM
		certificate matches the target host
		name.
		If you specify "No," the Workflow
		does not verify whether the ISM
		certificate matches the target host
		name.

6 "VMware configuration" - "eLCM mode" dialog

Input values for each item are as follows.

Parameter name	Default	Description
If "Yes" : eLCM is used for	No	Specify "Yes" or "No."
firmware update		If "Yes," a firmware update using
		eLCM is executed.
		If "No," a firmware update with
		the firmware data is executed.
If "Yes" : legacy BIOS	No	Specify "Yes" or "No."
compatibility mode is used		If "Yes," Legacy BIOS
when rebooting, else UEFI		compatibility mode is used.
mode is used		If "No," UEFI boot mode is used.

When using a vRealize Orchestrator client based on HTML5

If the vRO version is 7.4 or 7.5 or 7.6, you cannot execute the workflow with a vRealize Orchestrator client that is based on HTML5. Refer to the procedures for using an Orchestrator legacy client that is based on Java.

1 "vCenter" tab

Specify the ESXi cluster to which the operation target server belongs for the "Cluster" parameter.

- 1.1 Select the [Search for value] entry field.
 The "Select (VC:ClusterComputeResource)" screen is displayed.
- 1.2 Specify the ESXi cluster to which the operation target server belongs.
 [Note 1]

[Note 1]: If the ESXi cluster is not displayed in the vCenter inventory browser, execute Workflow from "Library" - "vCenter" - "Configuration" - "Add a vCenter Server Instance" in the Workflow tree.

2 "Management Controllers details" tab

Specify the IP address of the iRMC of the operation target server in the "iRMC_IP address" parameter, and the ESXi host information in the "ESXi" parameter. Specification procedure is as follows. [Note 2].

[Note 2]: If you registered iRMC information on the "Power Management IPMI/iLO Settings" screen of the ESXi host with vCenter Server in advance, the iRMC IP address and the ESXi host information are retrieved automatically during the Workflow process. The following procedures are not required in this case.

- 2.1 Select the [+] button.
 - A new window is displayed.
- 2.2 Enter the iRMC IP address of the target server in "iRMC IPaddress."
- 2.3 In the [Search for value] entry field under ESXi, enter the ESXi host that corresponds to the IP address of the iRMC that you entered in Step 2.3. Select the [APPLY] button.
 - The values that have been entered in the "iRMC_IPaddress" parameter and "ESXi" parameter are displayed.

......

2.4 Repeat Step 2.1 to Step 2.3 for the number of target servers.

If there is an error in the iRMC IP address of an iRMC server that is turned off and the ESXi server is turned off, the firmware update on the iRMC server with the incorrect IP address will be successful.

To avoid this, note that you must be careful when you enter an IP address for iRMC and ESXi host information.

- 3 "Settings for Management Controller" tab
 - Specify "Yes" or "No" for "If "Yes": no user interaction when changing to maintenance mode."
 - Yes
 - The ESXi host is set in Maintenance Mode automatically during the execution of the Workflow.
 - No

You must specify whether to allow the ESXi host to be set to Maintenance Mode during the Workflow in a dialog.

If specify "No" in a dialog, proceed to next ESXi host without entering Maintenance Mode.

After 5 minutes passed without specifying, specified "No" automatically. The "Timeout to wait for completion of maintenance mode. (minutes)" parameter is the timeout value for the Maintenance Mode on the ESXi host.

4 "Timeouts" tab

The "Connection Timeout (seconds)" parameter is the timeout value for the communication connection that is used in the Workflow. The value is displayed in seconds.

The "Operation Timeout (seconds)" parameter is the timeout value for the communication process that is used in the Workflow. The value is displayed in seconds.

5 "ISM Server" tab

Input values for each item are as follows.

Parameter name	Default	Description
Infrastructure Manager	None	Specify an IP address for ISM or
address (IP or FQDN)		an FQDN.
Infrastructure Manager port	25566	Specify a port number for ISM.
Infrastructure Manager user	None	Specify a login user name for ISM.
Infrastructure Manager	None	Specify a login password for ISM.
password		
If "Yes": the certificate is	No	Specify "Yes" or "No."
accepted silently and the		If you specify "Yes," an ISM
certificate is added to		certificate will be imported into
the trusted store		vRO automatically.
		If you specify "No," a confirmation
		dialog will be displayed when an
		ISM certificate is imported into
		vRO.
Verify whether the target hostname matches the	Yes	Specify "Yes" or "No."
names stored inside the		If you specify "Yes," the Workflow
server's X.509 certificate		verifies whether the ISM
		certificate matches the target host
		name.
		If you specify "No," the Workflow
		does not verify whether the ISM
		certificate matches the target host
		name.

6 "eLCM mode" tab

Input values for each item are as follows.

Parameter name	Default	Description
If "Yes" : eLCM is used for	No	Specify "Yes" or "No."
firmware update		If "Yes," a firmware update using
		eLCM is executed.
		If "No," a firmware update with
		the firmware data is executed.
If "Yes": legacy BIOS	No	Specify "Yes" or "No."
compatibility mode is used		If "Yes," Legacy BIOS
when rebooting, else UEFI		compatibility mode is used.
mode is used		If "No," UEFI boot mode is used.

6.5.2 Execute Workflow

When all the entry fields and lists are filled in "6.5.1 Start Workflow to Register Information." the [Submit] button or "RUN" button is enabled.

Select the [Submit] button or the "RUN" button to execute the Workflow.

After the Cluster Offline Update workflow is executed, all Offline Update targets are updated.

If specify "No." at "If "Yes": no user interaction when changing to maintenance mode" parameter in "6.5.1 Start Workflow to Register Information", execute "6.5.3 Add registration information to the Workflow".

6.5.3 Add Registration Information to the Workflow

After executing the Cluster Offline Update workflow, add a user input parameter.

When using an Orchestrator legacy client based on Java

If the vRO version is 8.0 or later, you cannot use an Orchestrator legacy client that is based on Java. Refer to the procedures for using a vRealize Orchestrator client that is based on HTML5.

......

Confirm that the following message is displayed from the [Logs] tab in the bottom of the right pane of the VMware vRealize Orchestrator workspace.

Please open user decision dialog by doing the following action:

If using Java based client, click the tab "My Orchestrator" (located in the upper left corner) then "Waiting for Input" (located in the right part).

If using HTML5 client, click the item "Waiting for Input" under "Activity" (located in the left tree).

Then, please click the item and answer if you agree with entering to maintenance mode.

Afterwards Offline Update workflow is going to proceed.

or detailed information see manual "FUJITSU Software Infrastructure Manager Plug-in and Management Pack Setup Guide".

- Select the [My Orchestrator] tab in the left pane. 2.
- 3. Select the [Waiting for Input] tab in the right pane.
- Select the [Answer a user interaction] icon. 4.
- Select "Yes" or "No" for "The host will be set in maintenance mode. Are you sure?" 5.
- Select the [Submit] button. 6.

When using a vRealize Orchestrator client based on HTML5

If the vRO version is 7.4, 7.5, or 7.6, you cannot execute the workflow with a vRealize Orchestrator client that is based on HTML. Refer to the procedures for using an Orchestrator legacy client that is based on Java.

.....

- 1. Select the Logs tab in the bottom of the right pane of the VMWare vRealize Orchestrator workspace.
- Confirm that the following message is displayed.

Please open user decision dialog by doing the following action:

If using Java based client, click the tab "My Orchestrator" (located in the upper left corner) then "Waiting for Input" (located in the right part).

If using HTML5 client, click the item "Waiting for Input" under "Activity" (located in the left tree).

Then, please click the item and answer if you agree with entering to maintenance mode.

Afterwards Offline Update workflow is going to proceed.

or detailed information see manual "FUJITSU Software Infrastructure Manager Plug-in and Management Pack Setup Guide".

- 3. Select [Waiting for Input] under "Activity" in the left pane.
- 4. Select the [ANSWER] link.
- 5. Select the checkbox for "The host will be set in maintenance mode. Are you sure?" if "Yes," and if "No," leave the checkbox cleared.
- 6. Select the [ANSWER] button.

6.5.4 Execution Results of Workflow

When using an Orchestrator legacy client based on Java

If the vRO version is 8.0 or later, you cannot use an Orchestrator legacy client that is based on Java. Refer to the procedures for using a vRealize Orchestrator client that is based on HTML5.

When the execution of the Workflow is complete, an icon that shows the execution results is displayed under the icon, "Offline Update" or "Cluster Offline Update" of the VMware vRealize Orchestrator Workflow tree.

Workflow logs are displayed in the "Messages" field in the "Logs" tab on the lower part of the right pane of the VMware vRealize Orchestrator workspace.

When an error occurs during the execution of the Workflow, an error message in red characters will be output in the Workflow log.

Exception messages for the Workflow are displayed in the "Exception" field of the "Variables" tab on the lower part of the right pane of the VMware vRealize Orchestrator workspace.

After executing Cluster Offline Update Workflow, check if the firmware of the target server is the latest version from the ISM screen.

If the firmware version is not the latest one, the firmware update may have been executed for the incorrect iRMC IP address and ESXi host combination.

Refer to "6.5.1 Start Workflow to Register Information" for the procedure.

When an error occurs during the execution of the Workflow, an error message will be output in the Workflow log. Take action as follows.

When a message starts with [ISM]:

An error message for the REST API of ISM is displayed.

Take action referring to "ISM Messages".

Example:

[ISM] {"MessageInfo": [{"TimeStamp": "2018-12-21T00:22:18.167Z",

"MessageId": "50060001", "API": "POST

https://192.168.100.163:25566/ism/api/v2/users/login", "Message": "Login

failed."}], "IsmBody": {}, "SchemaType":

"https://192.168.100.163:25566/ism/schema/v1/MessageInfo-

Out.0.0.1.json"}

• When a message starts with [ISM-vRO]:

Take action referring to "6.5.5 Messages."

Example:

[ISM-vRO] 50000009: 192.168.100.1 vMotion doesn't work or migration progress is too slow.

Other than the above

Follow the message, and take the appropriate action.

If you cannot take any action from the message, contact your local Fujitsu customer service partner.

Example:

Error in (Workflow:Cluster Offline Update / find Hosts (item4)#42) 0 hosts can be updated. You have provided not enough information.

Ending workflow!

When using a vRealize Orchestrator client based on HTML5

When the vRO version is 7.4 or 7.5:

After executing the Workflow, click "Workflows" - "Runs."

When the vRO version is 7.6 or later:

After executing the Workflow, click "Activity" - "Workflow Runs."

When the vRO version is 8.0:

After executing the Workflow, click "Activity" - "Workflow Runs."

Click the Workflow that has been executed.

The log of the Workflow is displayed in the "Messages" field of the [Logs] tab in the bottom of the right pane in the VMware vRealize Orchestrator workspace.

If there is a problem running the workflow, the workflow log displays an error message in red text.

Note

After executing Cluster Offline Update Workflow, check if the firmware of the target server is the latest version from the ISM screen.

If the firmware version is not the latest one, the firmware update may have been executed for the incorrect iRMC IP address and ESXi host combination.

Refer to "6.5.1 Start Workflow to Register Information" for the procedure.

When an error occurs during the execution of the Workflow, an error message will be output in the Workflow log. Take action as follows.

When a message starts with [ISM]:

An error message for the REST API of ISM is displayed.

Take action referring to "ISM Messages".

Example:

[ISM] {"MessageInfo": [{"TimeStamp": "2018-12-21T00:22:18.167Z",

"MessageId": "50060001", "API": "POST

https://192.168.100.163:25566/ism/api/v2/users/login", "Message": "Login

failed."}], "IsmBody": {}, "SchemaType":

"https://192.168.100.163:25566/ism/schema/v1/MessageInfo-Out.0.0.1.json"}

When a message starts with [ISM-vRO]:

Take action referring to "6.5.5 Messages."

Example:

[ISM-vRO] 50000009: 192.168.100.1 vMotion doesn't work or migration progress is too slow.

Other than the above

Follow the message, and take the appropriate action.

If you cannot take any action from the message, contact your local Fujitsu customer service partner.

Example:

Error in (Workflow:Cluster Offline Update / find Hosts (item4)#42) 0 hosts can be updated. You have provided not enough information.

Ending workflow!

6.5.5 Messages

6.6 Uninstallation Procedure

For the uninstallation procedures for the plug-in, refer to "Uninstall a Plug-In" in "vRealize Orchestrator" in "VMware Docs."

6.7 Precautions

To use ISM Plug-in for vRO, purchase of and installation of ISM are required.
 Refer to "User's Guide" for more details. Without installing ISM, this plug-in does

- not work properly.
- 2. To use ISM Plug-in for vRO, deployment in advance of and the availability of vRO are required. Refer to the product guides of VMware for operations of vRO.

7. ISM Plug-in for WAC 1.0.0 (ISM 2.6.0.010 or later)

7.1 Product Summary

Infrastructure Manager Plug-in for Microsoft Windows Admin Center (ISM Plug-in for WAC) is designed to extend the user interface of WAC to enable you to use the functions to integrate the infrastructure management of ISM from the WAC.

This Plug-in software enables you to operate ISM directly from WAC.

7.2 Contents

This product is composed of the following three (3) files:

- · fujitsu.sme.infrastructure-manager.1.0.0.nupkg
- · Readme.txt
- · Readme_en.txt

7.3 System Requirements

For information on the WAC system requirements to operate ISM Plug-in for WAC, refer to "Support Matrix."

https://support.ts.fujitsu.com/index.asp

Select [Select a new Product] on the above site and enter "Infrastructure Manager" in [Product Search:].

Select [DOWNLOADS] and select the target operating system.

The reference procedures are subject to change without notice.

7.4 Installation Procedures

This section explains installation procedures of ISM Plug-in for WAC into WAC.

7.4.1 Store the Install File

Use Remote Desktop to connect to the Windows Server on which you are installing ISM Plug-in for WAC.

Transfer the install file to an arbitrary directory on the Windows Server of the connection destination by copying and pasting the file.

7.4.2 Installation Procedures

- Open Windows Admin Center in a web browser using the following URL. https://<WAC_Server_FQDN_or_IP_ address>: <WAC_Server_Port>
- 2. Select the gear icon in the upper right corner of the screen to display the setting screen.
- 3. Select [Gateway > Extensions] from the left pane.
- 4. Select [Feeds] in the right pane.
- 5. Select [+ Add] in the right pane.
- 6. Enter the path to the directory where you stored the installation files in "7.4.1 Store the install file" in [Extension feed URL or path] and click [Add].
- 7. Check that the directory specified in [Package feeds] on the "Feeds" screen is displayed.
- 8. Select [Available extensions].
- 9. Select [Fujitsu Software Infrastructure Manager].
- 10. Select [Install].
- 11. Select [Installed extensions] and check that [Fujitsu Software Infrastructure Manager] is installed.

7.4.3 Register Information in ISM Plug-in for WAC

This section explains procedures to register information of ISM to ISM Plug-in for WAC.

- Open Windows Admin Center in a web browser using the following URL. https:// <WAC_Server_FQDN_or_IP_ address>: <WAC_Server_Port>
- 2. Select [>] at the top of the "WAC" screen and select [FUJITSU Software Infrastructure Manager Suite] from the installed solutions.
- Select the [+ Add] button.
 The "Connection tags" screen displayed.

4. Enter the following settings.

Item	Description
IP Address (imperative)	Input IP address of target ISM (ex. 192.168.100.10)
Port Number (imperative)	Input port number of target ISM (ex. 25566)
User Name (imperative)	Input username of target ISM (ex. Administrator)
Password (imperative)	Input password of target ISM

5. Select [Add] button.

If you change an ISM configuration item that is already registered, you must delete it and re-register it.

......

For example, here is the procedure for changing the ISM password.

- Open Windows Admin Center in a web browser using the following URL. https://<WAC_Server_FQDN_or_IP_ address>: <WAC_Server_Port>
- 2. Select [>] at the top of the "WAC" screen and select [FUJITSU Software Infrastructure Manager Suite] from the installed solutions.
- 3. Select the row you want to modify.
- 4. Select the [Remove] button.
- 5. Select [Yes] from the "Remove Connection(s)" window.
- 6. Change the ISM password.
 For details on how to change the password, refer to "2.7.1.2 Edit users" in "Operating Procedures."
- 7. Reregister the information you changed in ISM with the ISM Plug-in for WAC. For the registration procedures, refer to Step 3 or later in "7.4.3 Register Information in ISM Plug-in for WAC."

7.4.4 Install SSL Server Certificate of ISM into Web Browser

It is necessary to import the SSL Server Certificate into the devices to connect to WAC in advance.

Refer to "Appendix Import the SSL Server Certificate" regarding the SSL Server Certificate settings.

Without a Certificate, an error message appears.

7.4.5 How to use the ISM Plug-in for WAC

- Open Windows Admin Center in a web browser using the following URL. https://<WAC_Server_FQDN_or_IP_address>:<WAC_Server_Port>
- 2. Select [>] at the top of the "WAC" screen and select [FUJITSU Software Infrastructure Manager Suite] from the installed solutions.
- 3. Select the IP address for ISM.
- 4. Select from the menu on the left of the screen to move to each screen.
 - · Overview
 - Nodes
 - · Events
 - Firmware
 - Settings

"Overview" screen

ISM version information, and status information for nodes being managed by ISM can be displayed in the WAC.

"Nodes" screen

Detailed information of the nodes being managed by ISM (Hardware information, tree structures between nodes, etc.) can be displayed in the WAC.

"Events" screen

Event information maintained by ISM can be displayed in the WAC. Also, if there are a large number of events, you can export them locally to analyze trends or investigate causes by transitioning to ISM.

The event information displayed on the WAC depends on the ISM language settings. Therefore, you should set the language settings in WAC and ISM.

......

"Firmware" screen

Firmware information of the nodes being managed by ISM can be displayed in the WAC. You can also update the firmware by transitioning to ISM.

If ISM data is not available on each screen, the ISM connection information may be incorrectly configured.

Refer to "7.4.3 Register Information in ISM Plug-in for WAC" to remove ISM connection information and re-register.

7.5 Uninstallation Procedure

Uninstallation procedures of ISM Plug-in for WAC are below.

- Open Windows Admin Center in a web browser using the following URL. https://<WAC_Server_FQDN_or_IP_address>:<WAC_Server_Port>
- 2. Select the gear icon in the upper right corner of the screen to display the setting screen.
- 3. Select [Gateway > Extensions] from the left pane.
- 4. Select [Installed extensions] in the right pane.
- 5. Select [Fujitsu Software Infrastructure Manager] and select the [Uninstall] button.
- 6. Check that [Fujitsu Software Infrastructure Manager] is not displayed in the [Installed extensions] list.

7.6 Precautions

- 1. To use ISM Plug-in for WAC, purchase and installation of ISM are required. Refer to "User's Guide" for more details. Without installing ISM, this plug-in does not work properly.
- 2. To use ISM Plug-in for WAC, installation in advance of and connection to WAC are required. Refer to the product guides of Microsoft for operations of WAC.

8. Latest Information

For the latest information about ISM Plug-in, refer to URL below.

You can also refer to the latest information about ISM by contacting your local Fujitsu customer service partner.

Appendix Import the SSL Server Certificate

It is necessary to import the SSL Server Certificate in advance into the devices which should be connected to vCSA. Without Certificate, an error message appears.

An example with Internet Explorer 11 is below.

1. Prepare the SSL Server Certificate.

Prepare the SSL Server Certificate referring to "4.7.1 Deployment of SSL Server Certificates" in "User's Guide." Make sure to complete the certificate import on the intended devices.

If using Firefox, refer to "2.1.1 GUI" in "User's Guide" to complete the certificate import.

- 2. With Internet Explorer 11, navigate to [Tools] > [Internet options].
- 3. The [Internet Options] dialog box is displayed. Navigate to [Content] > [Certificates].
- 4. The [Certificates] dialog box is displayed. Select the [Personal] tab.
- 5. Select [Import]. The "Certificate Import Wizard" dialog box is displayed.
- 6. The "Welcome to the Certificate Import Wizard" window is displayed. Select [Next].
- 7. The "File to import" window is displayed. Select [Browse].
- 8. Select the [SSL Server Certificate] prepared in Step 1.
- 9. The path to the certificate file is displayed in [File name]. Confirm the file name or path of the certificate is correct. Select [Next].
- 10. The "Certificate Store" window is displayed. Confirm [Place all certificates in the following store] is selected. Select [Browse].
- 11. The [Select Certificate Store] dialog box is displayed. Select [Trusted Root Certification Authorities]. Select [OK].
- 12. [Certificate Store] is displayed. Select [Next].
- 13. The [Completing the Certificate Import Wizard] window is displayed. Select [Finish] after checking for misconfigurations.
- 14. When the [Security Warning] dialog box saying "You are about to install a certificate from a certification authority (CA) claiming to represent: <IP address of ISM or hostname>" is displayed, select [Yes] after confirming that the IP address

- or hostname of ISM is correct.
- 15. The message "The import was successful" appears. Select [OK] to close the dialog box.
- 16. Select [Close] to close the [Certificates] dialog box.
- 17. Select [OK] to close the [Internet Options] dialog box.
- 18. Reboot Internet Explorer 11.
- 19. Login to ISM and confirm that there are no errors.
