

SAP BusinessObjects explorer

SAP BusinessObjects Explorer (BOE) allows companies to disseminate BI functionality throughout their organisations to business users, similar to a "self-service" BI tool for non-technical users, which makes finding and analysing information as easy as using Google or Yahoo! search engines

Making smarter decisions faster

In order to make everyday business decisions, business users depend on the ability to access and understand information. Unfortunately, recent surveys show that these users often rely on "gut-feel" decision making due to lack of time and understanding to learn the powerful BI tools to provide them with this much needed data. SAP BusinessObjects Explorer employs high performance and scalability, providing Australian business users with the opportunity to dramatically increase Business Intelligence query response up to 100 times faster than non-tuned BI queries.

Simplicity and speed of search

End users simply enter a few search keywords to find the most relevant information instantly from across all of their applications and data sources. Data sources and metadata are pre-indexed so that users can search and explore enterprise data sources such as operational systems and data warehouses directly and with near instantaneous speeds. There is no pre-existing reports or metrics required.

Immediate insight on mountains of data

SAP BusinessObjects Explorer provides accurate and instant delivery of data required for decision making. Unlike alternate BI tools, the solution doesn't require in-depth training and heavily involved analytical methods. The solution allows for searching and sorting, interactive drilldowns, and various types of dynamic graphical visualisations while navigating through the data at incredible speed.

The best approach

As an SAP global services partner, Fujitsu will deploy the SAP BusinessObjects Explorer Software with Fujitsu PRIMERGY blade servers as an out of box solution, which will enable rapid deployment and allow customers to very quickly start realising business benefits. Globally certified by SAP, the solution is jointly developed by Fujitsu and SAP enabling optimal performance at the lowest possible cost.

Why Fujitsu?

Fujitsu is able to provide an end-to-end offering that leverages existing capabilities ranging from business advisory, implementation and post implementation services to maximise business impact and optimise service continuity.

Selecting an experienced partner like Fujitsu is vital for successful implementation of SAP BusinessObjects Explorer. Fujitsu offers in-depth technical skills, a firstclass record in delivering large scale technology deployments and a comprehensive understanding of SAP BusinessObjects Explorer technology. Fujitsu brings a reputation for flexibility and a history of forging close and productive customer relationships. Fujitsu is a certified SAP Gold Partner and has one of the largest SAP teams in Asia Pacific, comprising of more than 500 SAP practitioners.

Beyond an implementer of business intelligence tools, Fujitsu's solution-focused consulting expertise, proven best-practice methodologies, systems integration and infrastructure management experience can extend the value of our clients experience in a number of areas relevant to the successful implementation of the BusinessObjects Explorer.

- **Experienced integration** from our technicians delivering end-to-end solutions will ensure to meet the business requirements driving the project and will provide resources to get the job done with satisfaction
- **Faster deployment** of your BusinessObjects Explorer Business Intelligence platform as we are a global systems integrator and a thought leader in the world of Business Intelligence
- **Higher satisfaction** and employee buy-in through Benefits Realisation and BI sustainment initiatives
- **Increased knowledge** transfer by working alongside staff and team members
