

Upgrade to SAP ERP with Fujitsu

Fujitsu Australia's SAP practice offers proven expertise and methodologies that ensure a rapid, trouble-free migration to the latest version of SAP's renowned ERP software. We have achieved a 100% success rate in completing SAP upgrades on time and on budget.

Why upgrade?

Enhancements in SAP 2005 (ECC 6.0) include improved user experience, advanced and embedded analytics to deliver strategic business insight and a Service Oriented Architecture (SOA) blueprint incorporating more than 500 new services for flexible and adaptable business processes.

With ECC 6.0, organisations gain a deeper understanding of their businesses and markets and can identify opportunities more quickly. The speed and responsiveness enabled by the software then helps organisations to seize these opportunities ahead of slower-moving rivals. ECC 6.0 also allows businesses to identify problems quickly and act to minimise their impact.

Can I stay on my current version of SAP?

While previous software versions can continue to support existing systems and processes, not upgrading can:

- See your organisation cede advantage to competitors that are able to exploit newer functionality and flexibility.
- Force your business to meet increased costs, both visible and hidden. These include premiums for extended maintenance that far exceed the cost of upgrading.
- See your business continue to bear an ongoing cost in maintenance resources for customisations that may feature in a later version.

IT managers can find the ongoing annual maintenance effort for custom objects can remain as high as 20% of the initial development effort, while savings derived by eliminating unused objects can reach as high as 40%.

As a result, it is no surprise that business and government organisations worldwide are migrating to ECC 6.0.

FUJITSU UPGRADE SERVICES

Technical Upgrade

Spanning operating systems, databases and all advanced business application programs, including reports, function modules, module pools, interfaces and other custom objects.

Functional Upgrade

Including a Strategic exercise to review business process. Review existing processes and potentially implement new business processes to ensure full value is gained taking advantage of the new version functionality.

System Migration

Migrating an SAP environment from source to target and testing to ensure the project has minimal impact on the business.

Platform Migration

A mix of standard and high availability platform migration services.

Unicode Compliance

Upgrading systems and programs to become Unicode compliant.

How can Fujitsu Australia's SAP practice help?

Fujitsu Australia's award-winning SAP practice ensures rapid and seamless customer implementations of SAP's ERP software. We reinforce this with market-leading support services that ensure customers continue to maximise the business benefits delivered by SAP.

Our SAP practice has enjoyed a strong relationship with SAP since the mid-1990s. During this time, we have grown from a boutique implementation partner to a major player with more than 200 consultants across the country. Our track record of strong performance has enabled us to obtain blue-chip references and accreditation as a Global Services Partner, Global Technology Partner, Global Hosting Partner and a Mid-market Reseller.

We use our proven Consult–Design–Build–Operate delivery model to ensure your SAP implementation is effective, resilient and meets your business continuity requirements. As well as new implementations, we undertake upgrades to new versions of SAP products to ensure customers reap the business benefits of new and improved features.

Methodologies, delivery models and database deliver results

At Fujitsu Australia, we base our approach on creating industrialised IT infrastructures and services, making them more efficient, reliable, quicker-to-implement and easier to change. This approach ensures we provide customers with a more cost-effective and robust service than our competitors.

We employ reusable templates and automated tools to deliver a standardised SAP upgrade methodology, business process modelling service, version upgrade service and SOA consultation service.

Another key differentiator is our global knowledge database. This database enables our consultants to quickly access expert information derived from successful Fujitsu SAP 2005 implementations worldwide to ensure your project runs smoothly. It contains answers to critical questions such as:

- What are the typical process steps for a version upgrade?
- Which steps are most vulnerable for errors?
- Which steps are the most time consuming?
- Which steps need most manual work?
- What kind of expert skills do these steps require?

If you are interested in planning or implementing an SAP solution in your organisation, contact your local Fujitsu office or visit au.fujitsu.com/sap to arrange a meeting with one of our SAP experts.
