

Fujitsu Mobility Security Services

As a leader in the field of secure mobile solutions, Fujitsu understands the need to balance anytime, anywhere access to enterprise applications with the associated costs and security risks.

A one-size-fits-all approach to mobility is fundamentally flawed. That is why we have end-to-end security services that offer peace of mind for organisations that are gearing up for mobility.

How we can help

We offer a wider range of services to help enterprises with administering and securing an increasingly mobile workforce.

Our Professional Services

Thorough risk and information security assessment

Starting with the overall business objectives in mind, our security specialists will analyse your mobility requirements to determine which mobile solutions offer the best value for money. Where security threats do exist, we will work with you to determine the best way to minimise these and any potentially negative impact on your business.

Development of mobility policies

To ensure your mobility strategy is readily adopted across the organisation, we can help you identify the best approach for specific groups of mobile device users. Our recommendations incorporate the right balance of Bring Your Own Device (BYOD), Choose Your Own Device (CYOD) and Bring Your Own Service (BYOS) alongside our core mobile security procedures.

Business Continuity planning

Adopting a mobility strategy will have far-reaching and positive effects on the organisation. This extends to seamless Business Continuity planning. We can advise you on how mobile solutions can help speed up responses in the event of flood, fire, bomb or even bad weather.

BYOD Assessment

Bring Your Own Device (BYOD) is one of the fastest growing mega-trend in the IT industry.

With almost every vendor claiming that their product covers BYOD, organisations often require help from a trusted partner with the expertise to guide them through this complex and ever changing landscape. To help with this challenge we have developed the powerful Fujitsu BYOD Assessment. In just 3-4 weeks, this process will:

- Assess the appropriateness of BYOD and determines organisational readiness,
- Help engage and gain buy-in from key departments or stakeholders outside of IT (for example HR or Legal),
- Create a clear and agreed BYOD strategy as well as a roadmap for success, and
- Determine the immediate next steps in addressing the need for mobility in your organisation.

Our Managed Services

Mobile device management

If a mobile device is lost, stolen or faulty this could create a potential security breach. Using our unique approach to mobile device management, we are redefining mobile security with a breakthrough security architecture that operates at the device, application and network tiers. This offers enforced security that goes everywhere your data does, securing every point in your expanding mobile environment, including:

- **Secure Tracking** - swiftly and automatically detects threats from devices that are not adhering to predefined security policies (e.g. have been jail broken) and adjusts security settings to immediately mitigate any risks.
- **Secure Gateway** - brings intelligent security to the network. Used in conjunction with Secure Access, the Gateway controls entry to all corporate applications and logs all mobile application traffic for compliance and reporting purposes.
- **Secure Access** - allows IT to offer mobile users secure, encrypted access to specific business applications from their smart device. This provides a simpler, more flexible and fully secure way to meet the growing demand for access to business-critical applications.

Our Virtual Client Services (VCS)

IT managers face cost control, security, mobility and consumerisation challenges – especially with the rising popularity of BYOD. Virtualisation is an effective way of reducing management effort and costs, increasing flexibility and enhancing service quality across varied user roles.

Our flexible, tried-and-trusted VCS cover all steps in the journey, combining virtualisation technologies with proven infrastructure products and end-to-end lifecycle services from a single source, including:

- Initial consultations and business case assessments to maximise ROI,
- Full lifecycle support from device delivery through support and maintenance to retirement,
- A range of hosting options, including Fujitsu Data Centre, Customer Data Centre and Cloud, and
- Integration into existing IT infrastructures.

Our Partner Services

Secure mobile services

Fujitsu is an accredited Becrypt Managed Service Provider. This accreditation, achieved by our dedicated Security Operational Centre (SOC), allows both our commercial and public sector customers in the UK to benefit from Becrypt's End Point Protection (EPP) solutions as a fully managed service.

Secure (VPN) Communications

Our market-leading SSL/VPN and Unified Access Control appliance makes the task of managing mobile IT security much more straightforward. Our highly secure wireless LAN portfolio also ensures organisations are able to offer a fully secure technical architecture to their mobile users. With our partner Juniper we are in a position to provide a complete security solution covering the protection and management of all mobile devices, their users and their apps.

Why Fujitsu?

Fujitsu is best placed to support your mobility strategy because:

- We approach mobility end-to-end, including BYOD from the business perspective rather than the technology perspective, to ensure you realise the full benefits while avoiding the pitfalls.
- We have created a unique BYOD diagnostic tool - developed from our experience of across the public and private sectors - that will ensure you have access to industry best practice at every level.
- We have the ability to follow through with a portfolio of services that can support mobility and BYOD. For us, a one-size-fits-all approach is inadequate and you can be sure that our advice will be actionable based on our understanding of your unique business requirements.

Start your journey to enterprise mobility with a complete mobile security assessment.
