Seamless Windows 10 migration starts here

Windows 10 | FUJITSU

What's driving the pace of change in businesses today? Simple answer: people.

As customers and employees, we expect the kind of customer experience and workplace flexibility that progressive, digital tools deliver. This is making CIOs and ICT leaders look outwards to enabling technology, like Windows 10, to meet changing market demands. At the same time, they still have to serve the needs of current business. Gartner calls this 'bimodal IT', we call it a route to digital transformation. Whatever you call it, you are going to need a plan.

For many, Windows 10 presents a platform for digital transformation and making the workplace of the future a reality. With Windows 10, Microsoft offers a major advance for forward-looking businesses that want to improve employee performance and drive efficiency. It enables new levels of workplace mobility. And, it is the first 'evergreen' Windows OS – heralding the arrival of 'Windows as a Service'. Through automatic, regular updates you can avoid major upgrades. At the same time as freeing up internal resources, you retain control and full visibility through centralised management and secure delivery.

Understanding the benefits of a new operating system is one thing, realising them is another
Deploying and upgrading an OS involves significant cost and resources and involves every part of the business. You need to manage application and platform lifecycles, growing types of devices, mobile IT and evolving security threats. You also need to measure the benefits it delivers, both for technical and end users. Making the business aware of potential productivity gains, transforms a technical-led project to a business-led one.

You don't have to do it alone
Our approach is focused on outcomes to give organisations fast results through proof of concept and testing. It has helped businesses of all sizes across all industries gain extra agility through more flexible and responsive IT. So, no matter how complex your business environment, we can help you balance performance, cost, flexibility and security. Taking a consultative approach which we call Xpressway – gives you the benefit of our experience, the short cuts and quick wins we've developed and also ways to identify and avoid potential pitfalls.

With XpressWay for Windows 10, you can use our extensive knowledge and experience to achieve a seamless integration, and get the most out of your upgrade to Windows 10.

Explore the potential of Windows 10 with your own XpressWay for Windows 10 discovery workshop.

Get the most from Windows 10 with XpressWay

A fully tailored approach to help you benefit from Windows 10

- 'Evergreen' updates that replace major upgrades and minimise disruptive migrations
- Improve productivity via integrated Cortana and bot development framework
- Encryption and enhanced boot checks for greater control
- In-built security that includes improved authentication methods like biometric
- Apps that are compatible with all devices, including PC, laptop, tablet and phone
- Multiple desktops running different workloads on the same device.

shaping tomorrow with you

Your XpressWay to the digital workplace

We've got a name for building a truly connected digital workplace. It's 'Workplace Anywhere'. It means giving your people access to their apps, content and services anywhere, on any device. And Windows 10 can be the perfect platform to make it happen.

Of course, different businesses will take different routes to Workplace Anywhere. That's why we use XpressWay. Our customisable, consultative approach scales to your organisation and your needs. How? We deliver Xpressway in four strategic stages – only taking the next step when everyone is happy to proceed:

Discover

We work with your business and technology stakeholders to understand your current situation, your vision and the best way to realise it. Together we drill down what you need to ensure a smooth migration to Windows 10.

Prove

Evidence from a working model of our recommended solution allows you to make your go / no-go decision.

Apply

We implement the solution using an agile, fast to fail approach, and ensure affected business units are fully prepared and enabled to support change.

Evolve

We apply feedback and learning to continually enhance the business value of your investments. Using responses to changing user needs, market developments and technology advances to evolve services.
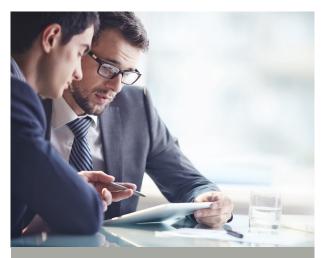

Transformation without disruption

We helped Toyota in Australia create a unified operating environment for over 2,100 devices. Careful planning and management of the migration meant minimal disruption. Toyota saw the overall cost of service drop, reducing its total cost of ownership, together with an improved end-user experience and increased levels of employee productivity.

Enabling new ways of working

A large UK financial institution wanted to reduce the burden of maintaining support and compliance on the desktop. It couldn't transform the way it worked by staying with a legacy desktop. We virtualised 55,000 desktops in the UK to deliver a 'desktop as a service' within the company's firewall.
