

PaperStream Software Solutions

Capture. Optimize. Access.

Solutions Overview

Fujitsu Computer Products of America, Inc. (FCPA), is pleased to provide capture software that helps organizations leverage and optimize what is most important when processing documents - the data. FCPA's PaperStream software portfolio helps businesses increase efficiencies, reduce costs, and minimize resources. With these products, organizations can integrate a solution that best meets their business needs, so they can begin leveraging data immediately. Scalable, high-quality, and comprehensive, this software portfolio helps organizations meet their overall capture goals.

PaperStream IP TWAIN and ISIS

[PaperStream IP TWAIN and ISIS](#), available with any Fujitsu fi Series scanner, is an industry recognized and unique image enhancement software that delivers powerful image correction allowing documents to be quickly converted into exceptionally high-quality images. PaperStream IP TWAIN and ISIS alleviates the need to re-scan, therefore reducing time and resources, and prepares data for optimized capture results.

PaperStream Capture

[PaperStream Capture](#) is a simple front-end software that enhances the power and features of Fujitsu fi Series document scanners. PaperStream Capture is easy to use, needs minimal operator training time, and immediately increases productivity. Click on the profile icon for batch and ad hoc scanning, profile cloning or modifying, new profile and single button scanning creation using a clear, step-by-step interface and release options. PaperStream Capture is fully integrated with Fujitsu Scanner Central Admin (SCA) enabling seamless deployment updates and profiles to the entire scanner fleet at no additional charge.

PaperStream Capture Pro

[PaperStream Capture Pro](#) is a high-quality, front-end document capture software that enhances Fujitsu fi series superior scanning abilities with features that save time and money. PaperStream Capture Pro's intuitive interface provides easy navigation from capture to release, with automatic image enhancements and assisted scan correction. Cost effective with no cost per click, the software is scalable and architected for distributed scanning. PaperStream Capture Pro is a simple solution that best fits organizations or departments that require an efficient, yet easy, way to convert paper documents into a digital file for high level data indexing and extraction.

Business Value and Benefits

- Optimize data for business value with high-quality document processing and imaging
- Increase productivity with scalable solutions serving any size company with any volume of paper
- Reduce costs by leveraging a flexible pricing model with no hidden charges or volume packs
- Increase operational efficiency with access to the Fujitsu comprehensive industry leading support team

PaperStream Server

Paper Stream Server is a web-based enterprise-class document processing platform that enables organizations to collect, process, and introduce business critical content in Line-of-Business or Enterprise Content Management systems. Through an easy-to-use interface, PaperStream Server accelerates responsiveness while reducing the cost of document management. PaperStream Server accomplishes this through a web-based system that accepts documents from multiple sources, sends images through a configurable set of applications, including Fujitsu's best-in-class image enhancement technology, and routes them to the point of maximum business impact. As business processes evolve, PaperStream Server is scalable and adaptable to meet future business needs.

Product Highlights

- Web-based platform
- Import from multiple sources
- Best-in-class image cleanup utilizing PaperStream IP
- Extensible ECM connections and two-way communication
- No additional user or volume charges

DEPARTMENT		
	Use Case	Benefit
Human Resources	Employee Recruiting	Automatically ingest emailed resumes and applications
	Employee Files	Store employee files in each employee's folder with meaningful file names
Accounting	Accounts Payable	Capture AP invoices leveraging the ERP transaction data
	Accounts Receivable	Bulk load AR invoices generated by the Accounting system
Legal	Litigation	Convert boxes of paper documents into fully searchable electronic files
	Historical Records	Clean up hard-to-read historical documents, even if they are already digital

INDUSTRY		
	Use Case	Benefit
Healthcare	Patient Records	Upload barcoded documents to patient records
Financial Services	New Account Opening	Route applications to the appropriate branch based on the document information
Insurance	Claims	Import emailed supporting documentation for claims
Education	Admissions	Process student records faxed or scanned at a multi-functional device
Government	Branch Offices	Handle documents in any office through a web browser
