

WILLISTON, VT, March 14, 2005 - **Daybreak Intellectual Capital Solutions Inc.**, in conjunction with **Fujitsu Computer Products of America Imaging Products Group** and **Captiva Software Corporation**, proudly announce the public availability of Daybreak's critically acclaimed ***Foundations*** in Documentum-Based Content Management Systems (CMS) course in five locations across the US. "Project teams that strive to better understand key Documentum concepts and strategies are better preparing themselves to ensure success. Daybreak clearly recognizes this need and helps to support this awareness along with Fujitsu for the document imaging industry," said Thomas Loeffler, director of business development, Fujitsu Computer Products of America, Imaging Products Group.

This represents the first time the two-day ***Foundations*** course has been offered in a public setting. The ***Foundations*** course presents the Documentum software platform from both a strategic and an implementation process point of view. After developing an understanding of the key components of the Documentum software suite, deployment methodologies and best practices that lead to successful implementations are then examined.

Many leading organizations view attendance at a ***Foundations*** course as a critical step in the implementation of any Documentum-based initiative. Previously ***Foundations*** was only available as a customized course delivered at a client site. These regional public offerings make it possible for smaller organizations and those just beginning a CMS project to gain the benefit of ***Foundations*** without a larger group commitment. The course specifically addresses the needs of project sponsors, stakeholders, and development staff members (business and systems side) by providing the key strategies and best practices that must be an integral part of the successful Documentum implementation process.

Cindy Menges, VP Training Services, Daybreak ICS points out, "***Foundations*** provides a great starting point for our clients and prepares them for the project ahead by leveling the playing field and giving team members the insight they need to make their implementation a success. Our clients continually tell us the project could not have been as successful without the concepts and strategies provided in ***Foundations***."

About Daybreak Intellectual Capital Solutions, Inc.

Daybreak ICS is a [Documentum Signature Partner](#) and Documentum's preferred provider of custom user training. Daybreak was founded because we were Documentum users first! Daybreak delivers a 360 degree view of the Documentum implementation having been users, consultants/implementers, integrators, and trainers of the market-leading Documentum content management system. Further, Daybreak ICS was formed with the strong belief that organizations outside the Global 2000 require the same high-end solutions as the world's largest corporations. Daybreak ICS commits to delivering affordable and manageable Documentum-based content management and knowledge sharing solutions within diverse industry segments. Employing comprehensive project management skills, processes, and real-life product expertise, Daybreak ICS consistently meets and exceeds the expectations of their clients.
