Fujitsu Technology Solutions
Middle East.

Gartner: virtualization leads to cloud

What fits for me?

Server-virtualization

- Would its enhanced usage be sufficient for me?

Private cloud

- Does it solve my problems?

What about your requirements?

Flexibility

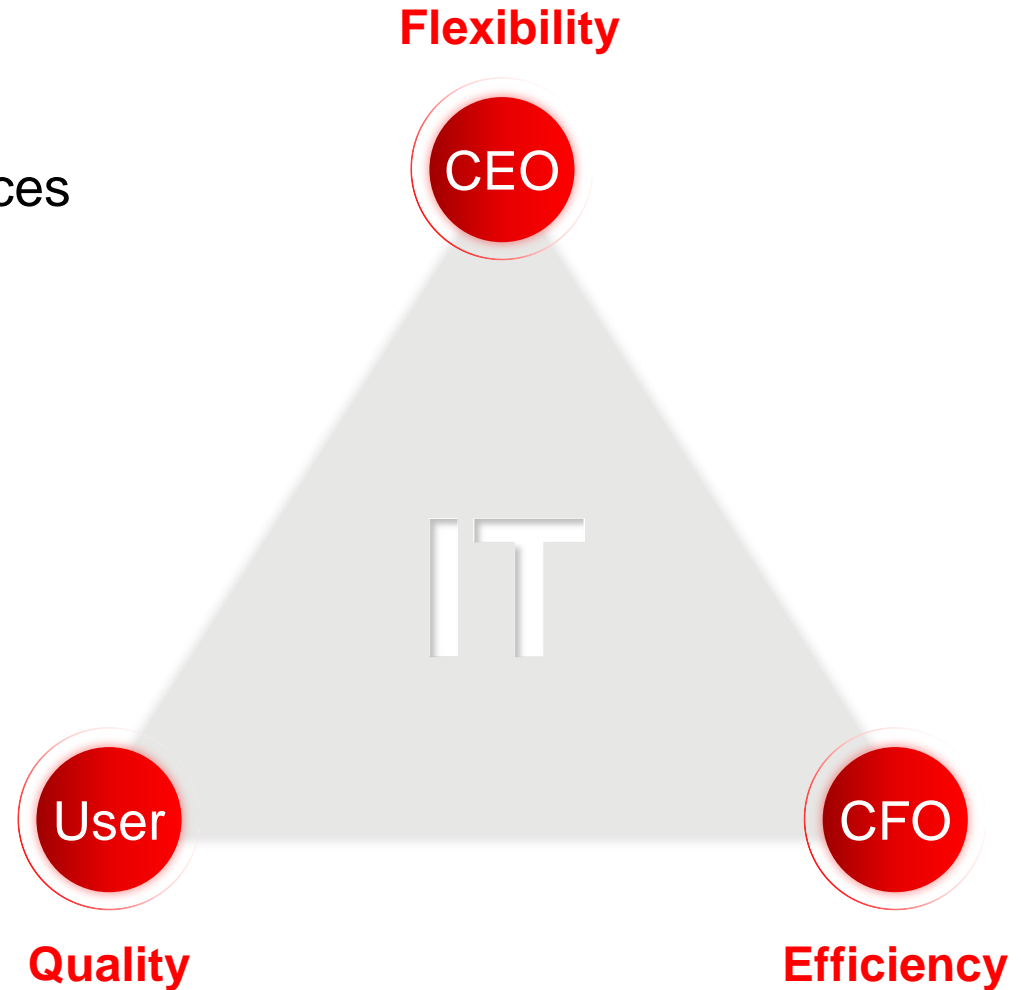

- New business demands
- Rapidly adapt services
- Time-to-production of new services

Efficiency

- Reduce complexity and cost
- Transparency
- Minimized risk
- Compliance

Quality

- Improved service levels
- Productivity
- End user satisfaction

Server-virtualization could solve your problems

Better utilization of physical resources

- Lower IT operation costs (energy, space, ...)

Efficiency

A homogeneous separation layer

- Old services can be used on new hardware

Flexibility

Many automation options

- Standardize routine jobs

Quality

Easy deployment

- E.g. "offline" software deployment

Efficiency

Easy scalability

- New services are available in minutes

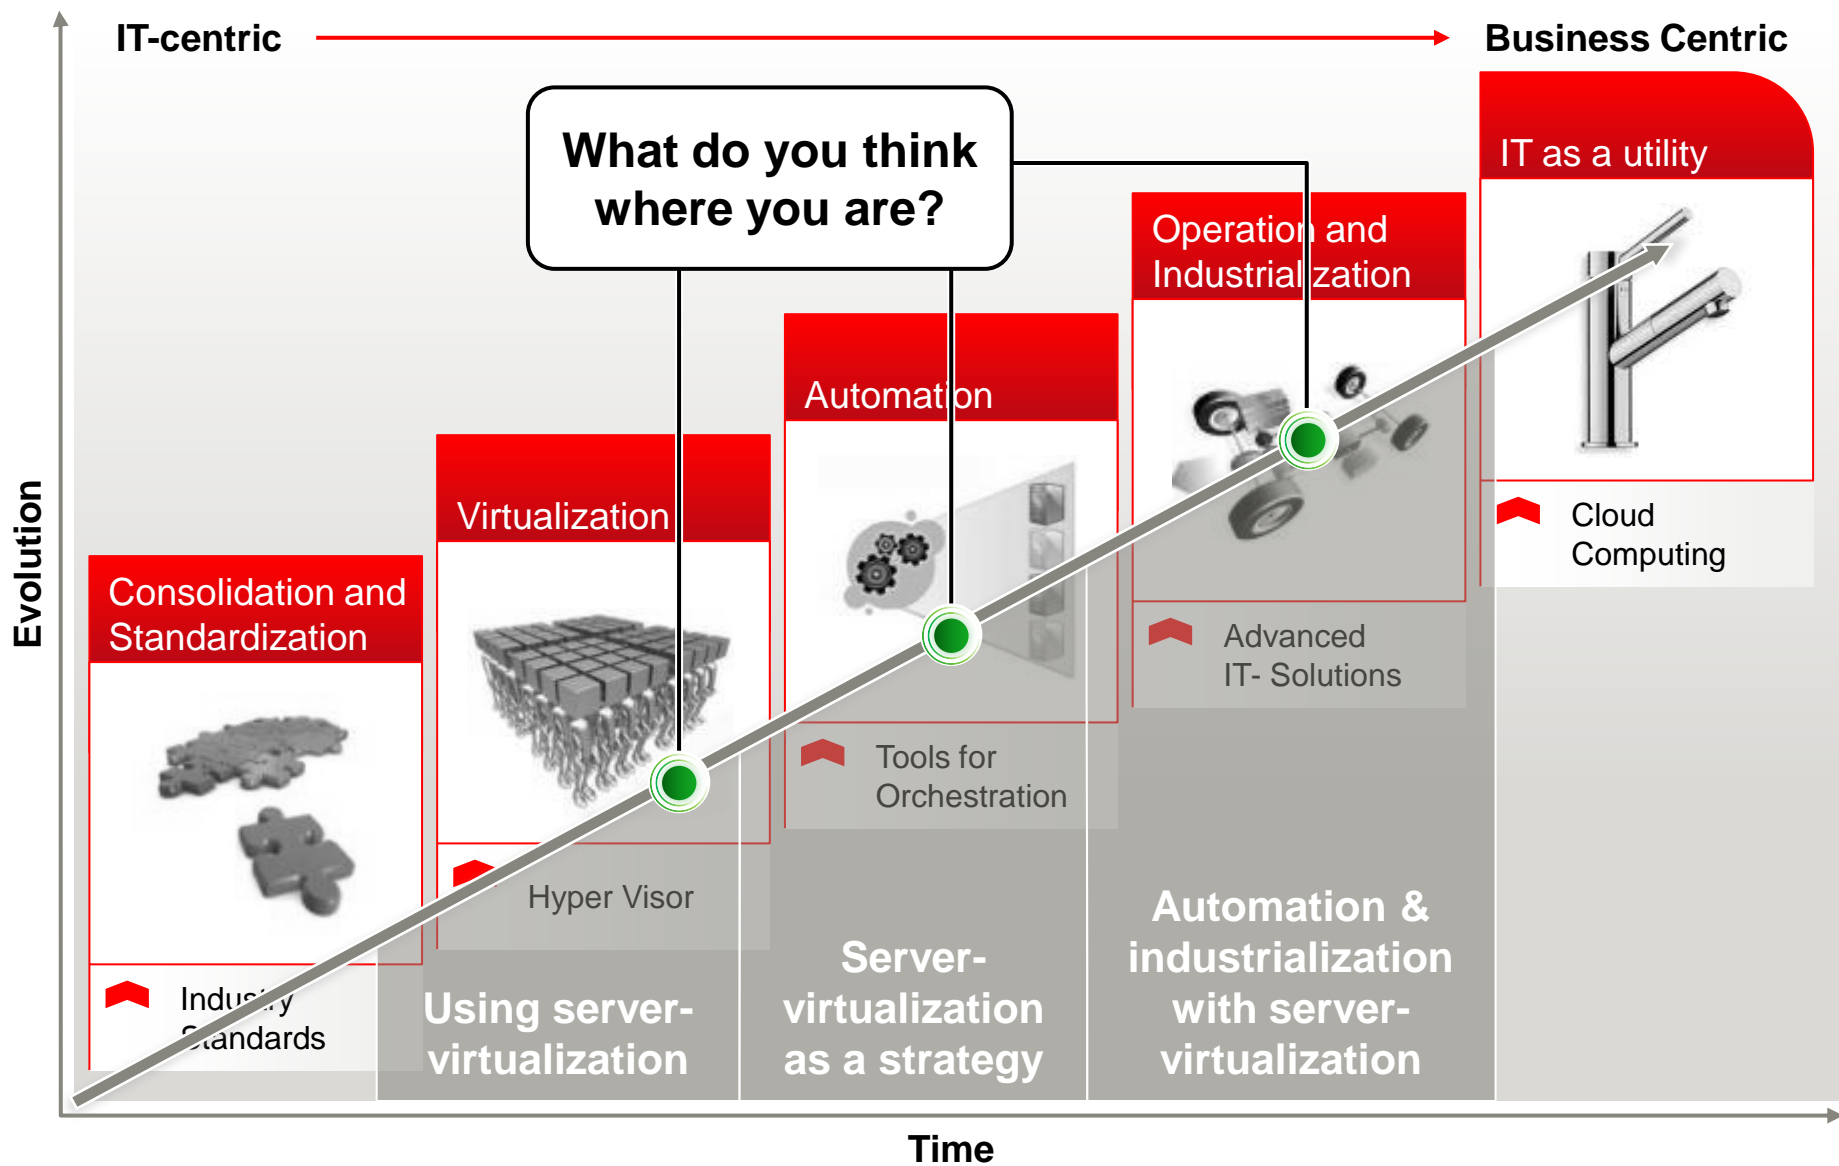

Flexibility

Easy to implement availability solutions

- Uniform SLA's through application independence

Quality

Virtualization states

Let's take a look at cloud computing

Cloud: Consuming IT as a Utility

Hybrid – a combination

IaaS

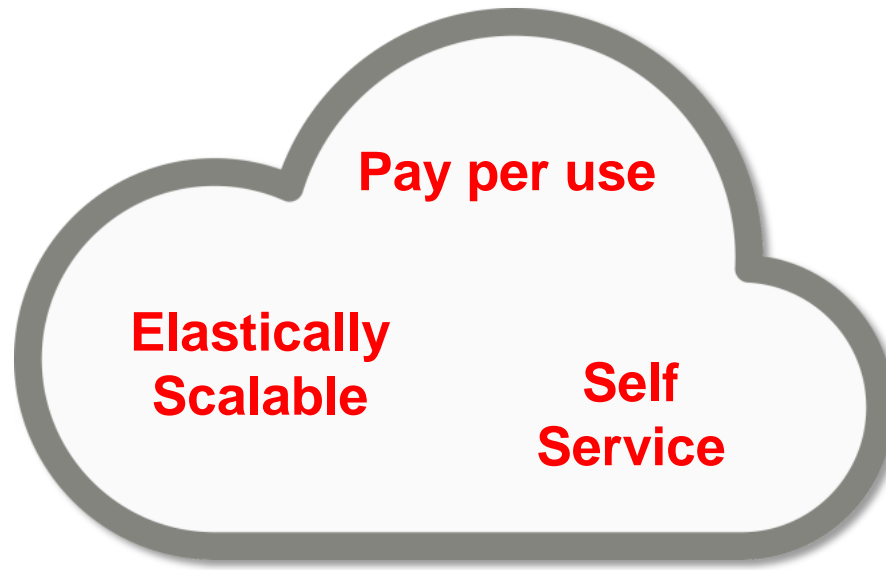

PaaS

SaaS

BPaaS

What do you expect from a private cloud?

Cloud: Consuming IT as a Utility

- ➔ Are you looking for 'Pay per use' or cost transparency?
- ➔ Does any self service solve your business or IT requirements?
- ➔ What is the scalability you need?

Agreed so far?

What to
do next?

Why
should I
look for in
a partner?

Customers speak :

"The Fujitsu solution has transformed our server environment, reduced our carbon footprint and is expected to save us £500.000,- in the first year alone."

Karen Charlton, Senior Technical Specialist, Imperial Tobacco

"Thanks to virtualization and Fujitsu's stable storage systems, our IT runs securely and smoothly – and the performance is exceptional. We felt that we were in good hands during the consulting process."

Frank Rabe, Acting National Chief Executive, DLRG

"The project should enable OPEGIEKA to implement advanced R&D projects. Those will include application of cloud computing and the SOA architecture in geodetic, analytical, and decision-support systems."

Sebastian Stybel, Chief Network Administrator, OPEGIEKA Sp. z.o.o.

"The solution Fujitsu delivered was absolutely perfect for us. We were able to double performance, maintain around-the-clock availability, cut power consumption by half and reduce operating costs. And we were able to do all that quickly and economically."

António Marques, IT Manager, Linha de Cuidados de Saúde (LCS)

Licensing & Buying Options

Microsoft offers a private cloud that delivers real value today and positions a business to take advantage of greater public cloud benefits in the future. Microsoft private cloud solutions are built using Windows Server with Hyper-V and System Center – the combination of which provides scalable virtualization, end-to-end service management, and deep insight into applications so you can focus more attention on delivering business value. Microsoft private cloud solutions are delivered through our wide ecosystem of partners and are offered as custom, pre-configured, or hosted offerings.

Download the **Licensing Datasheet** for a comprehensive overview of licensing programs to best meet your needs.

For sales questions, contact a Microsoft representative at (800) 426-9400 in the United States or (877) 568-2495 in Canada.

Below you will find additional detail to help guide you into the channel that best meets your needs.

Microsoft Private Cloud Fast Track

The Microsoft Private Cloud Fast Track program enables you to get up and running with a pre-configured private cloud. A joint effort between Microsoft and its hardware partners, the Fast Track program helps organizations quickly develop and implement private clouds while reducing both cost and risk. The program is built on a reference architecture that combines Microsoft software, consolidated guidance, and validated configurations with partner technology—such as computing power, network and storage architectures, and value-added software components.

Contact a Microsoft partner today and to find out how your organization can achieve both the control and the flexibility required to reap the benefits of the private cloud.

Fujitsu delivers private cloud technology that drives down TCO through server consolidation and improvements in storage and networking. Built on the Microsoft Private Cloud Fast Track reference architecture, Fujitsu's innovative hardware and homogenous software stack deliver powerful private cloud benefits for more manageable IT.

Fujitsu PRIMERGY™ VMware vCloud Director™

Intel® Cloud Builders Guide: Cloud Design and Deployment on Intel® Platforms
Aggravand™
VMWARE vCLOUD DIRECTOR™

INTENDED AUDIENCE AND PURPOSE
This reference architecture seeks to simplify the deployment and operation of a cloud. We built a cloud with VMware vCloud® Director and the cloud orchestration platform, PRIMERGY C1200, on an Intel® Xeon® processor-based server platform and documented the work involved with this particular cloud configuration.
The content is targeted to IT professionals responsible for the design, implementation, validation, and operation of cloud structures. We share the details on the hardware configurations, software configurations, and results from specific test cases we implemented that demonstrate basic operational capabilities.
This paper should complement product documentation and is provided as a starting point for the actual development of an enterprise or on-premise cloud.

Cloud Computing Infrastructure: Cloud Builders Reference Architecture Library

Use the proven cloud-building recipes and guidance below to make it easier to deploy and optimize your cloud computing infrastructure. Each reference architecture is based on real-world IT requirements and gives detailed instructions on how to install and configure a particular cloud solution using Intel® Xeon® processor-based servers and technologies.

Developed with ecosystem systems and solutions leaders, the following reference architectures focus on building or simplifying a cloud, enhancing security, and improving efficiency in your cloud environment.

Start of your journey to the cloud

What it is?

A workshop to accelerate and substantiate your decision-making for cloud computing and how to start successfully implementing this in your organization.

Benefits

- Quickly gain expert advice on the advantages that cloud computing can offer you today
- Accelerate your decision-making for cloud computing versus other IT sourcing options
- Gain valuable input in supporting your IT sourcing strategy

Deliverables

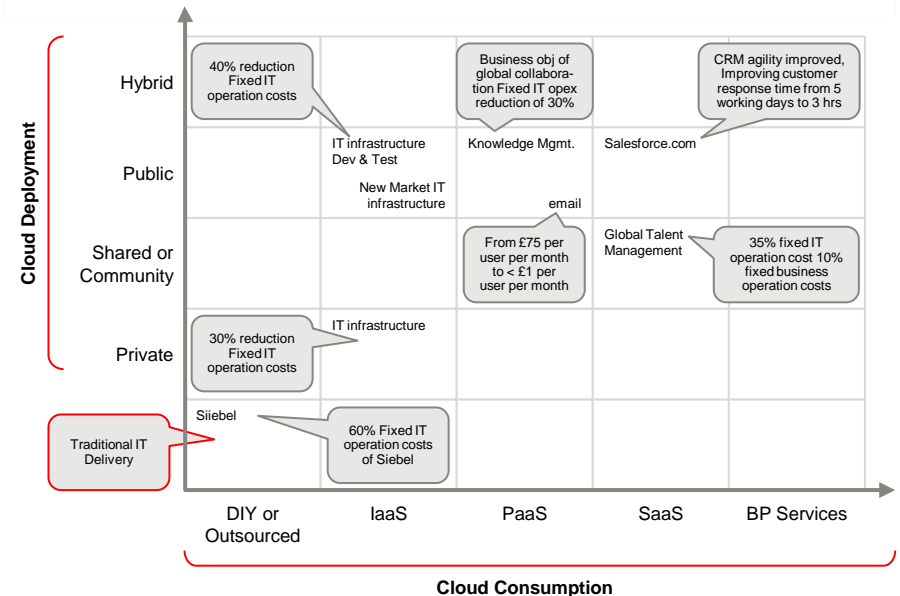

You receive a report clearly detailing:

- A business benefits analysis for cloud computing for your organization
- Sourcing options matching your discrete IT services, detailing compatibility to cloud and non-cloud delivery models
- Prioritization of existing processes to a possible cloud delivery model
- An executive cloud strategy for the organization

Participants

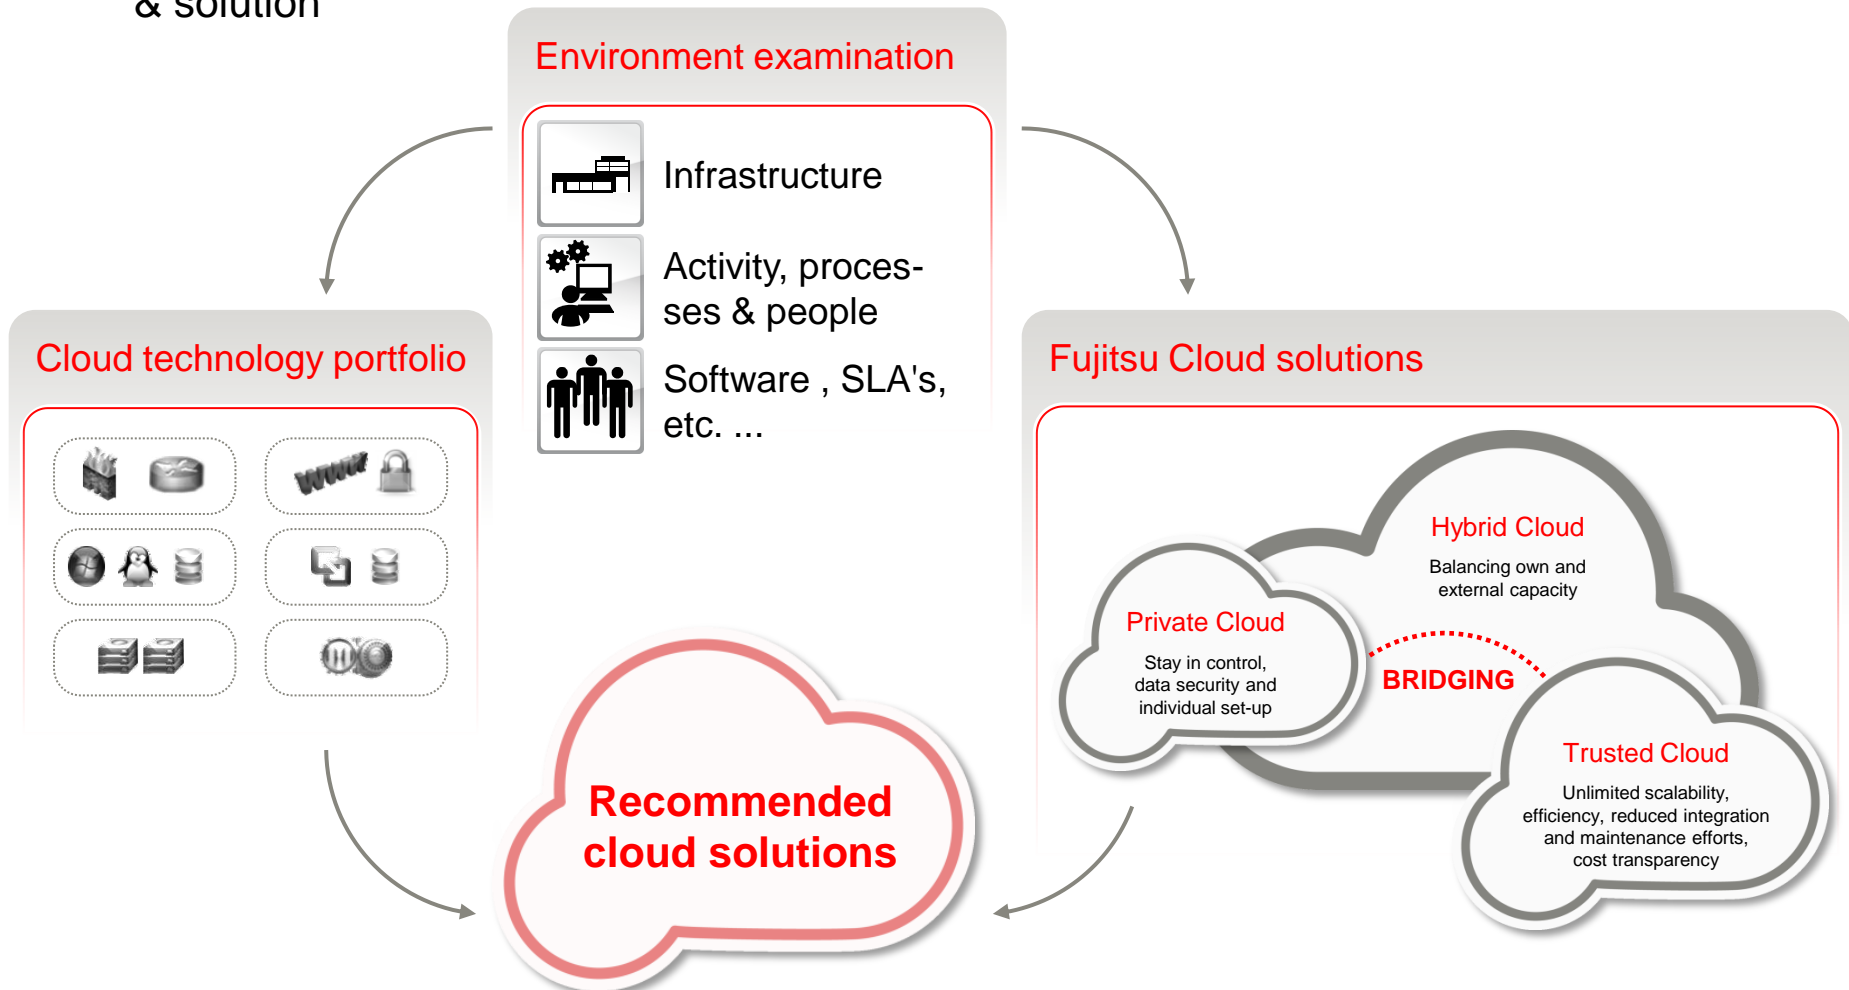

- Fujitsu cloud consultants
- Business and IT strategic decision makers from the customer organization

Possible next (or first) step

Cloud Readiness Assessment

- ➔ This service examines your infrastructure based on current workloads and applications assessment to determine the readiness and the appropriate targeted cloud environment & solution

Why Fujitsu?

- ➔ Many years of experience – coming from mainframe virtualization and as a cloud service provider
- ➔ Best of breed platforms
 - PRIMERGY, ETERNUS, various clients, ...
