## A Hybrid Cloud Journey Board Game

### Environment is mapped

Have you mapped your entire environment, including dependencies, services, applications, and server configurations?

**Have you completed a cloud-ready assessment?**

### Cloud Migration Strategy defined

Including the "Six Rs":  
Rehosting, Refactoring,  
Revising, Rebuilding,  
Replatforming, and Retiring.

**Will you conduct a pilot migration to resolve any issues that surfaced during the design phase?**

### Cloud Migration Plan

Do you have a Cloud Migration Plan that outlines the migration process, timelines, and responsibilities, including all Stakeholders?

**Have you selected the appropriate Cloud Migration Tools?**

**Do you plan to optimise your cloud environment for performance, cost, and security on an ongoing basis?**

### Opex Budget is not defined

Do you have a clear understanding of CapEx to Opex and multi-year budgets?

**Do you have a clear scope defined to manage the migration project?**

### Do you have Security designs and plans?

Aspects of cloud migration can expose your data to risks.

### Migration Partner doesn't have the capability

Have you chosen a migration partner based on cost rather than expert and proven ability to support you?

**Do you have a thorough Testing Strategy, including the involvement of end-users and performance testing?**

**Do you have the knowledge, skills, experience and tools to undertake the migration and ongoing support?**

### Is your approach "lift and shift"?

Not considering the need to modernise or replace applications can lead to higher operating costs post-migration.
