How Financial Services organisations can reimagine their everyday operations

What really matters in Financial Services is being better at predicting the future, but the effects of the pandemic have made it harder than ever to know what the world is going to be like this time next year, let alone in five years from now. What financial services organisations need to do now is future-proof their businesses and make themselves resilient to all forms of disruption that might lie ahead.

Despite all this uncertainty, you do still have many technological advancements to help you be Always Optimal. You can gain a critical edge in a rapidly changing and challenging environment if you can process more combinations of possible outcomes and futures faster than your competitors.

To do that you need to ask more complex questions and leverage the power of combinatorial optimisation to gain faster insights and make better decisions. It is the key to staying financially (and operationally) sound and profitable. There are more possible futures than any human brain can cope with.

And classical computing can't cope with them either. Which means, for most financial services enterprises, there are a huge number of possible futures that can't be analysed using the tools currently available. If they try, it takes too long.

What you need is processing superpower so you can find the optimal solution from that huge number of complex variables and quintillions of options and do it in seconds. Then keep doing it so you can re-optimize your results as often as you need or want to. The ability to deliver combinatorial optimisation at speed enables you to act more decisively.

Combinatorial Optimisation is recognised as a key function by 57% of enterprises according to Forrester research conducted for Fujitsu.¹ And, the same research showed that the leaders of those enterprises see Quantum-Inspired Computing to the key to achieving an Always Optimal approach to leveraging the power of their data.

Delivering that lightning fast computing power is the simple idea behind Fujitsu's Quantum-Inspired Optimisation Services (QIOS). You are able to seize new business advantages while always running your operations at their optimal level.

1. Forrester Thought Leadership Study: Data Review February 2020

Your data is the key to decisive optimisation

Any financial services enterprise runs on data. Historical data, current data, and projected data. That's always been true, but in a hyperconnected, global economy that runs milli-second to milli-second, achieving a data-edge can mean the difference between profit and loss and missed growth targets.

QIOS adds an extra dimension to how you can consistently (and quickly) pinpoint the best solution(s) from a massively complex set of possibilities hidden within very large amounts of data. Then repeat the process as often as you need to. The power to do that

reliably has not been possible until now. That means you get a richer understanding of what's happened, what's happening today, and what could happen tomorrow.

Fujitsu's QIOS gives you the calculating power to optimise complex models, processes, and services across an enormous range of use-cases.

This allows you to create business solutions which run faster, use less energy and space, and, crucially, cost less.

Four ways QIOS could make a big difference in Financial Services

- QIOS enables a general insurer to achieve an Always Optimal view of how their customers are engaging with their products and services as well as insights into a broad spectrum of their day-to-day behaviors. The ability to process a huge number of possibilities and models delivers deep insights into how customer engagement can be improved and innovative products developed and launched in a fast moving marketplace.
- A specialist insurer can offer a client with complex needs a much better-balanced product offering based on a deeper analysis of an array of risk priorities associated with the building of a shopping and entertainment complex. The ability to calculate many complex models linked to the construction, operation, and public liability issues, means that the final deal is priced optimally to win and retain the business.
- Portfolio managers strive each day to maximise returns whilst minimising risk to achieve the so-called Efficient Frontier. QIOS delivers a processing superpower which enables them to go beyond that and find the Optimal Frontier where a wide range of defined factors that balance high- and low-risk investments with daily return targets are calculated at speed. The quantum-inspired approach means that more complex models can be run more often to add a critical dimension to decision making hour by hour.
- All financial institutions must comply with stress testing demands from regulators. QIOS enables the complex and time-consuming process of Reverse Stress Testing (RST) to be carried out much faster than ever before. The ability to deploy superpower processing means that the RST can be carried out more often, optimising the agility and resilience of the institution as well as satisfying regulators.

Optimise everything, always

QIOS delivers the power to focus on optimisation in any area of your business by enabling you to transform the way you deal with combinatorial optimisation challenges. It's a power you can focus on the way you work across your organisation and how you engage with your markets.

So, you can:

- Identify the addressable, valuable outcomes you want from your Digital Transformation through our unique Human Centric Design co-creation methodology and with the support from Functional or Industry Consultants which puts you and your needs at the heart of how QIOS works across your enterprise. Our Digital Annealer is the processing superpower which delivers transformation at lower risk. Our Proof of Business consultancy ensures you stay focused on achieving your objectives.
- Start quickly: our Quantum-Inspired Optimisation Services are powered by the Digital Annealer technology that is available now and already helping businesses overcome their combinatorial optimisation challenges.
- Control costs: PoBs control initial costs whilst testing the real business case. Flexible delivery options provided on premise or through the cloud 'as a service', help control Capex/Opex.
- Overcome skills gaps to ensure you have the right internal skills to achieve your ambitions, we offer an end-to-end solution which includes platform consulting, integration, training and support services.
- Integrate it all with your existing operations – that's essential to leverage value, so we integrate Digital Annealer cloud services to legacy infrastructure. When it's more appropriate, QIOS is also available on-premise and comes with full integration support and services.

Beyond optimisation to Always Optimal

Now is the time to reimagine your everyday operations to help future-proof your business and protect it from whatever lies ahead. That will enable you to focus on driving those key benefits that really matter to your business now and over the long-term.

- **Productivity gains:** with systems and processes transformed to drive even higher productivity by optimising processes, systems and assets
- **Greater Efficiency:** optimise your processes as often as needed, meaning you're constantly running at maximum efficiency
- **Transformation:** by reaching a new level of business transformation in your Digital Transformation (DX) journey
- **Flexibility:** through the ability to become Always Optimal from a range of more dynamic processes, operation or environments
- **Trust:** that your business is running at Always Optimal and there's no more cost/outcome trade-offs, with the comfort from more accurately constrained models, that are operating efficiently

- **Sustainability:** by running at Always Optimal, your organisation is being a more resourceful and sustainable business

As we've stressed, QIOS enables you to ask more complex questions and achieve combinatorial optimisation using lightning fast, innovative quantum-inspired computing. If you can make the most of your data, see more, do more, learn more, and do it all faster. That means you're Always Optimal. Even in the face of a pandemic which has changed the way we work forever. Looking ahead, organisations like yours will be seeking to future-proof your business by becoming more flexible and secure. And you'll be looking to technology to help you achieve this; driving your business forward no matter how challenging the market becomes.

Ensuring that your business is Always Optimal is critical in a rapidly changing financial sector.
