

Kick-start your journey to AWS

Co-creation

FUJITSU

Fujitsu Cloud Service for AWS **Co-creation** lays the foundations to speed up your migration to AWS.

AWS offers leading development tools and cutting-edge technology that can transform your organisation. However, ensuring you exploit the maximum benefit of the world's biggest hyperscaler is complex. This complexity poses a much greater risk to your organisation if there is no detailed plan in place. Planning for the move to AWS requires a variety of skills, tools, and processes. To be successful, this cannot be done in isolation.

Fujitsu Cloud Service for AWS includes **Co-creation**. This is where we work with you to identify where you want to get to and any potential obstacles along the way. Our four-stage process will give you a holistic view of your current business. It will align your AWS transition goals with your wider business goals. And it will give you a plan of action that cuts complexity and risk from your AWS deployment.

Key benefits

- Standardised processes with fixed-price consultancy and assessment.
- A cost effective approach with both on-site and remote delivery.
- Access to Fujitsu experts who will provide a 360° view of your organisation.
- Options for creating a formal business plan, detailed project plan, and granular migration strategies.

Why Fujitsu

- We have thousands of consultants designing multi-cloud solutions with customers globally.
- Our industry focus and structure gives us unparalleled insight into your industry environment and challenges.
- We deliver offsite services in-country and through our global delivery services to offer cost-effective services whilst complying with any regulatory requirement.
- We have over 2,500 staff members trained in cloud technology globally, and over 300 accredited in AWS.

shaping tomorrow with you

What can I expect?

Fujitsu Cloud Service for AWS **Co-creation** is a three-stage process that cuts complexity from your transition to AWS. It will reveal your readiness for AWS and set realistic goals so you can accelerate your migration.

Stage 1 Business Accelerator

2-4 weeks

This agile consultancy service will help you define an IT Strategy that is aligned to your business strategy. We embed our public cloud consultancy experts into your organisation to work alongside your own personnel. At this stage we will deliver workshops with key personnel, to formulate the top level vision for IT in your organisation, a clear action plan and identify areas for quick wins.

Stage 2 Strategic Assessment Service

6-16 weeks

This stage provides a 360° view of your organisation's IT. After the strategic assessment service is completed we will deliver a map of your IT estate including people, process and technology all linked back to your business KPIs, enabling you to make the right decisions based on business outcomes.

Stage 3 Roadmap

1-6 weeks

The Roadmap stage will give you the foundations for change and the plans to make this happen. The granular roadmap, based on specialised Fujitsu tooling, will set out precisely how you can move your applications and infrastructure to AWS. It provides you with a migration strategy and target state definition and a program strategy which encompasses key strategic considerations such as dependency mapping and move group identification.
