

Fujitsu Cyber

A unified, powerhouse division combining the cyber security expertise of Fujitsu and our new divisions.

December 2024

Our vision

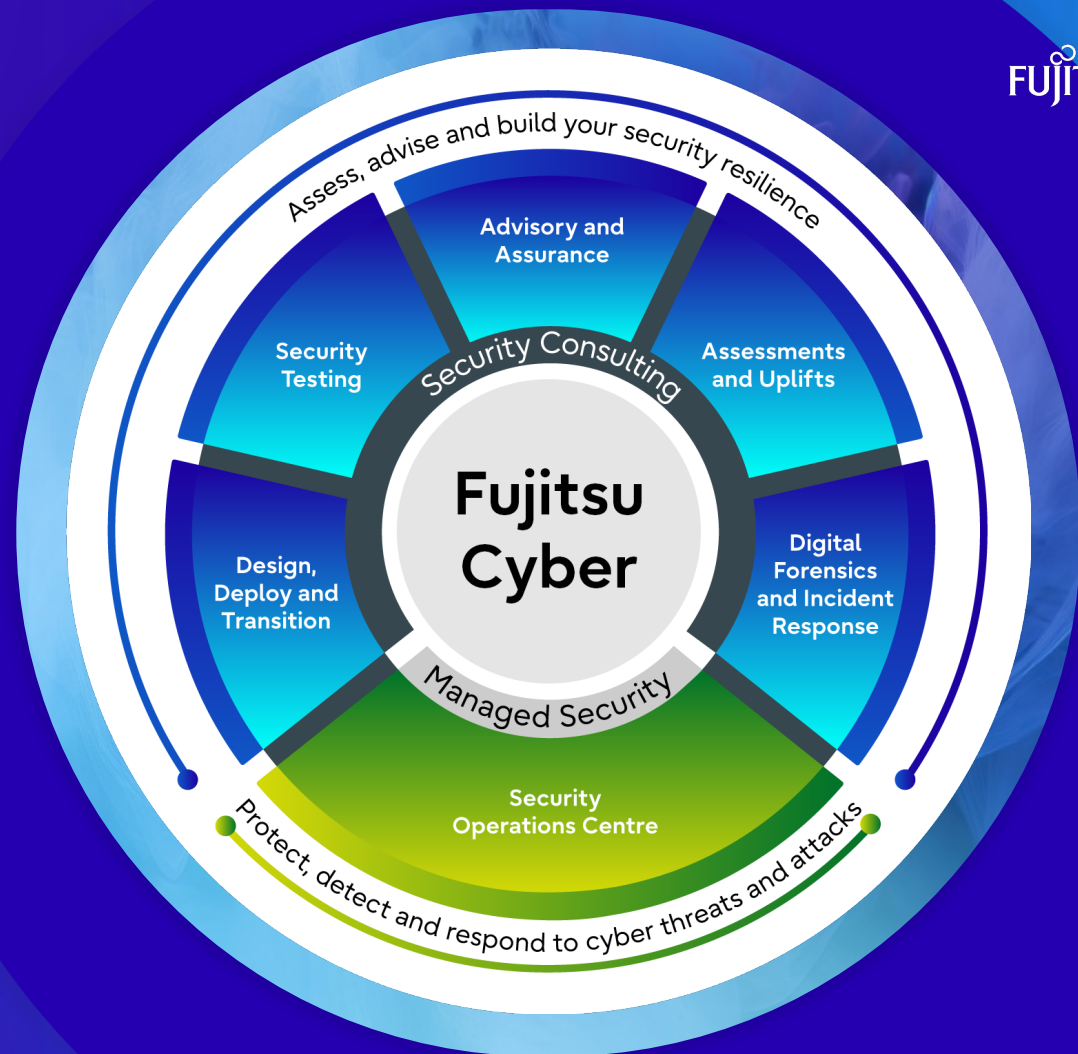

At Fujitsu Cyber, we envision a world where businesses **thrive** in a secure digital ecosystem, supported by our expert consultancy, advanced security solutions, and a commitment to creating a safer cyber future.

Our mission: We strive to lead the market with our unique blend of **talent, technology, and trust**, setting new standards in cyber resilience and customer success.

FUJITSU

Digital Forensics and Incident Response (DFIR)

Expert response and detailed analysis to navigate and mitigate cyber incidents

Fujitsu Cyber offers a critical evaluation and enhancement of your cyber defence capabilities through our Digital Forensics and Incident Response services.

Swiftly and effectively address security incidents, backed by expert risk forensics and comprehensive e-discovery capabilities to ensure thorough investigation and resolution.

Our simulation exercises and reports are designed to uncover risks, streamline operations, and enhance security across your entire infrastructure.

Security Testing

Comprehensive testing for robust digital defence

Our Security Testing capabilities include a comprehensive suite of testing, reviews and reports—including robust penetration testing, breach attack simulations and DDOS exposure assessments. Our red team exercises are designed to simulate a multi-layered attack scenario that will test your business's people, networks, applications, and physical security controls.

Our offerings are designed to rigorously challenge and refine your security posture across web applications, networks, and wireless systems.

Advisory and Assurance

Strategic guidance and confidence in your security posture

With extensive experience in assisting organisations to develop and deliver strategic goals, we provide our customers with business-focused strategies, management and delivery advice, and assistance in navigating their business challenges.

Our comprehensive consulting services encompass strategy and roadmap development, virtual CISO, information security management, ISO27001 audit preparedness, policy suite creation, supply chain reviews, gap assessments, audits, and systems accreditation.

We specialise in helping you understand your security posture and implement mitigations to keep your people, data, systems, and reputation safe.

Assessments and Uplifts

Evaluations and enhancements for your cybersecurity framework

Evaluate and enhance your organisation's readiness across key security frameworks such as Essential Eight and Zero Trust, along with specialised assessments for technology risk, including Microsoft 365, cloud (Azure, AWS and GCP) infrastructure, AD and Entra ID identities.

It doesn't end with an assessment. Drawing from our findings, our security experts will deploy appropriate solutions to uplift and advance the security of your environment.

Our assessments not only enhance your security, but also ensure that your systems are accredited and aligned with industry best practices.

Design, Deploy and Transition

Customised security architecture, seamlessly integrated and future-proofed

Our approach involves meticulously crafting and delivering tailored security solutions that guarantee a smooth transition and integration.

We align with local and international frameworks and standards to deliver sustainable and robust security solutions tailored to each organisation's unique needs, while incorporating sophisticated security controls and vendor systems integration.

Our methodology enables us to architect, procure, implement, maintain, and optimise your security infrastructure, ensuring robust and enduring protection.

Security Operations Centre (SOC)

Comprehensive threat intelligence and automated security response

Our full range of professional security services and managed security services are based on best-of-breed security technologies.

Fujitsu's local and global Security Operations Centres provide a 24/7 secure service tailored to your requirements and drawing on more than 40 years of experience in highly secure environments.

Our extensive range of capabilities, leverage advanced tools such as Managed EDR, SIEM and cloud security solutions like CSPM and SASE.

APAC Security Operations Centres (SOC)

We deliver onshore SOC capability to meet our customer requirements enhancing service intimacy and securing business outcomes

- Expert personnel provide 24*7 eyes on glass threat detection and controls management
- Advanced reporting
- Continuous improvement

Intelligence led approach

Powered by extensive threat hunting capability across the SOC, actively undertake research on global threat actors and their TTP. Leverage 30+ threat feeds and Atomic Red Framework. Member of the NCSC Malware Free Networks (MFN).

Highly experienced incident responders

Our team were instrumental in establishing the Forensic Investigation and Response Unit within the NCSC at GCSB, investigating many highly sophisticated cyber-attacks and network intrusions.

Hardened SOC

Our purpose-built SOC's are designed to meet the needs for information classified SECRET as per the government Protective Security Requirements. We have also been accepted into the NZ Defence Force's (NZDF) Defence Industry Security Programme (DISP).

Global Reach Local Impact

We leverage Fujitsu global capabilities including 1000+ experts to ensure comprehensive security and assurance.

Case studies

Cyber defence solution secures health services
Case study: Large Government Health Agency

Challenge
In response to a cyber breach at a large agency in the Australian government health services provider, the agency needed to enhance its cybersecurity posture across a varied tech environment, including both modern and legacy systems.

Solution
Fujitsu designed a cybersecurity upgrade with web filters and dynamic protection, using the AWS Cloud for a cloud-based, multi-tenant architecture. The project involved detailed assessment, design, and deployment phases, ensuring ongoing integration with the agency's existing security architecture. The FCS3 team provided expert technical assistance, contributing to the design and provisioning of secure resources which significantly improved the detection and management of insider threats.

Outcomes
With its proactive post-implementation, the agency's security has strengthened across cyber threats. This new approach with a solid Incident Response Plan and have had positive results, ensuring that the agency is better equipped to handle security challenges thanks to Fujitsu's continued support for ongoing defense operations.

Enhancing insider threat detection capabilities
Case study

Challenge
Faced with the growing complexity of insider threats and the need for comprehensive monitoring systems, the agency engaged FCS3 to identify and implement a robust, multi-layered approach to insider threat detection and management.

Solution
FCS3 delivered a secure, cloud-based solution that aligned with the agency's strategic security requirements. The project involved detailed assessment, design, and deployment phases, ensuring ongoing integration with the agency's existing security architecture. The FCS3 team provided expert technical assistance, contributing to the design and provisioning of secure resources which significantly improved the detection and management of insider threats.

Outcomes
Post-implementation, the agency experienced a transformation in its ability to monitor, detect, and respond to insider threats. The solution's comprehensive monitoring capabilities, combined with the agency's existing security architecture, enabled the agency to identify and respond to insider threats more effectively, ensuring the security of its critical data and systems.

Transforming cybersecurity with innovative solutions
Case study

A daunting task of macro management
In the fast-paced world of cybersecurity, operations are continually challenged by the need to protect their digital assets against increasingly sophisticated threats. Cyber Cyber Security Services is proud to have been selected to provide a strategic approach to cybersecurity through a comprehensive project with a government agency. This case study highlights the challenges faced by the agency, the solutions provided by FCS3, and the measurable outcomes achieved through the implementation of Macrosec, a cutting-edge cybersecurity tool.

Challenge
The agency, involved in an artificial project to assess and manage the risk associated with cyber threats, a complex task for the agency. The project involved a comprehensive assessment of the agency's existing security posture and the implementation of a new security framework. The agency's existing security posture was outdated and did not meet the requirements of the new security framework. The agency's existing security posture was outdated and did not meet the requirements of the new security framework.

Solution
A strategic plan to Macrosec. Upon learning about FCS3's Macrosec solution, the agency recognized an opportunity to radically transform their approach to cybersecurity. Macrosec, a state-of-the-art designed for efficient and effective threat detection, prevention, and response, was implemented across the agency's entire network. The agency's existing security posture was outdated and did not meet the requirements of the new security framework. The agency's existing security posture was outdated and did not meet the requirements of the new security framework.

Outcomes
The agency's existing security posture was outdated and did not meet the requirements of the new security framework. The agency's existing security posture was outdated and did not meet the requirements of the new security framework. The agency's existing security posture was outdated and did not meet the requirements of the new security framework.

Accelerating cybersecurity maturity with Perimeta for 365
Case study

Challenge
In the dynamic field of cybersecurity, organizations worldwide face continuous challenges. A notable initiative in Western Australia (WA) aimed to enhance the cybersecurity posture of public sector agencies through the Perimeta for 365 maturity model. In this context, Fujitsu Cyber Security Services became a key partner, leveraging its ability to deliver rapid and effective cybersecurity assessments. This case study details the challenges, solutions, and significant results of improving Fujitsu's Perimeta for 365 practice.

Solution
To address cyber resilience against threats, the agency engaged Fujitsu Cyber Security Services to conduct a comprehensive assessment of its cybersecurity posture. The project involved a detailed assessment of the agency's existing security posture and the implementation of a new security framework. The agency's existing security posture was outdated and did not meet the requirements of the new security framework. The agency's existing security posture was outdated and did not meet the requirements of the new security framework.

Outcomes
The project commenced the following week, aligning with the agency's requirements. The project commenced the following week, aligning with the agency's requirements. The project commenced the following week, aligning with the agency's requirements.

Why Fujitsu Cyber

Fujitsu Cyber is not just about cybersecurity; it's about integrating with Fujitsu's history of innovation, offering transformative security solutions that are rapid and effective.

Integrated expertise

We leverage Fujitsu's strategic acquisitions and global capabilities including 1000+ experts to ensure comprehensive security and assurance.

Tailored solutions

We craft and deliver tailored security solutions to meet the evolving needs of our customers in an ever-changing security landscape.

Comprehensive support

From consulting to AI-enhanced security operations, Fujitsu Cyber ensures end-to-end support, enabling you to focus on your core business with the certainty of formidable cyber resilience.

People and culture

Our passionate team unites the industry's finest, offering a distinctive blend of expertise from advanced threat intelligence to rapid response mechanisms and strategic guidance.

Powerful partner ecosystem

Fujitsu's powerful partner ecosystem is built on a foundation of collaboration and innovation delivering integrated solutions and seamless support.

Awards

Our team is one of the most highly awarded cyber security teams in the Asia Pacific, including in our contribution to diversity and inclusion which is our core focus. Our team includes three former CISOs, the 2021 AISA Cyber Security Professional of the year, the former WIC Defying Gravity award winner, the AWSN Australian Women in Security Awards Unsung Hero.
