

Accelerating cybersecurity maturity with Fujitsu Cyber Security Services

Perimeta
for 365

Case study

In the dynamic field of cybersecurity, organisations worldwide face continuous challenges. A notable initiative in Western Australia (WA) aimed to bolster the cybersecurity posture of public sector agencies through the Essential Eight (E8) maturity model. In this context, Fujitsu Cyber Security Services became a key partner, showcasing its ability to deliver rapid and effective cybersecurity improvements. This case study details the challenges, solutions, and impactful results of deploying Fujitsu's [Perimeta for 365](#) platform.

Challenge

Essential Eight maturity mandates

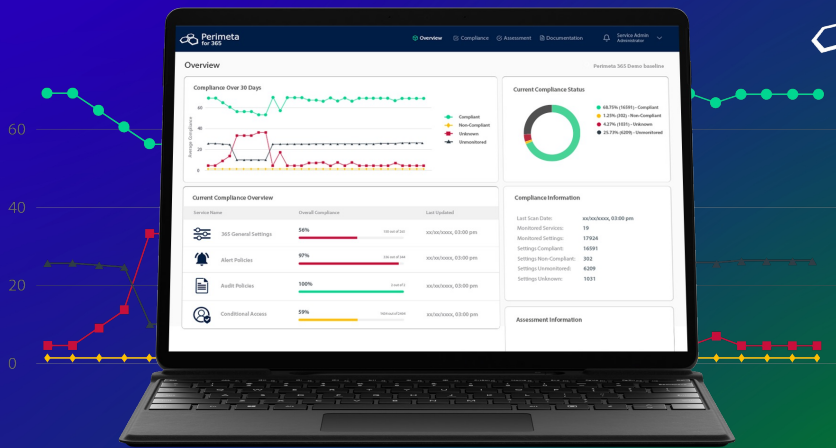

To enhance cyber resilience against threats, a directive was issued in WA for public sector agencies to achieve at least level 1 maturity in the Essential Eight model within two years. This initiative focused on implementing fundamental cybersecurity mitigation strategies. An audit was scheduled midway to evaluate progress. Faced with the need for quick advancements in their Microsoft 365 (M365) environment, a leading agency sought an efficient solution to improve its security posture swiftly.

Solution

Rapid deployment of Perimeta for 365

In response to the call for assistance in December 2023, Fujitsu displayed remarkable agility and expertise. A Statement of Work was promptly signed, and a dedicated team was mobilised to integrate the agency with Perimeta for 365, Fujitsu's bespoke security solution for the M365 ecosystem. The project commenced the following week, aligning with the agency's preparedness.

Outcomes

Implementation and results: Quick security enhancement before the audit

The expedited rollout of Perimeta for 365 enabled the agency to see how to activate the enhanced security features within days of deployment. This prompt action led to immediate improvements in the agency's cybersecurity measures, in line with the Essential Eight's goals. The swift and effective implementation underscored Fujitsu's capacity to provide rapid cybersecurity enhancements, facilitating the agency's progression towards the mandated maturity level.

Conclusion

Looking ahead

Following the successful introduction of Perimeta for 365, discussions have initiated about adopting [Macrosine](#) in the upcoming year. This conversation highlights the continued dedication to advancing cybersecurity strategies, reflecting a proactive stance in addressing digital landscape complexities.

Through Fujitsu's intervention and the deployment of Perimeta for 365, substantial progress was made in fortifying the cybersecurity framework of a key public sector agency. Fujitsu remains committed to supporting organisations on their path to cybersecurity excellence with tailored, cutting-edge solutions.
