

Move on from the Mainframe

FUJITSU

shaping tomorrow with you

PROGRESSION from Fujitsu

Would you like to?

Reduce Total
Cost of Ownership
by at least 50%

Enable digital transformation,
allowing your organisation to
operate with greater agility

Remove dependency on
expensive, increasingly
rare skillsets

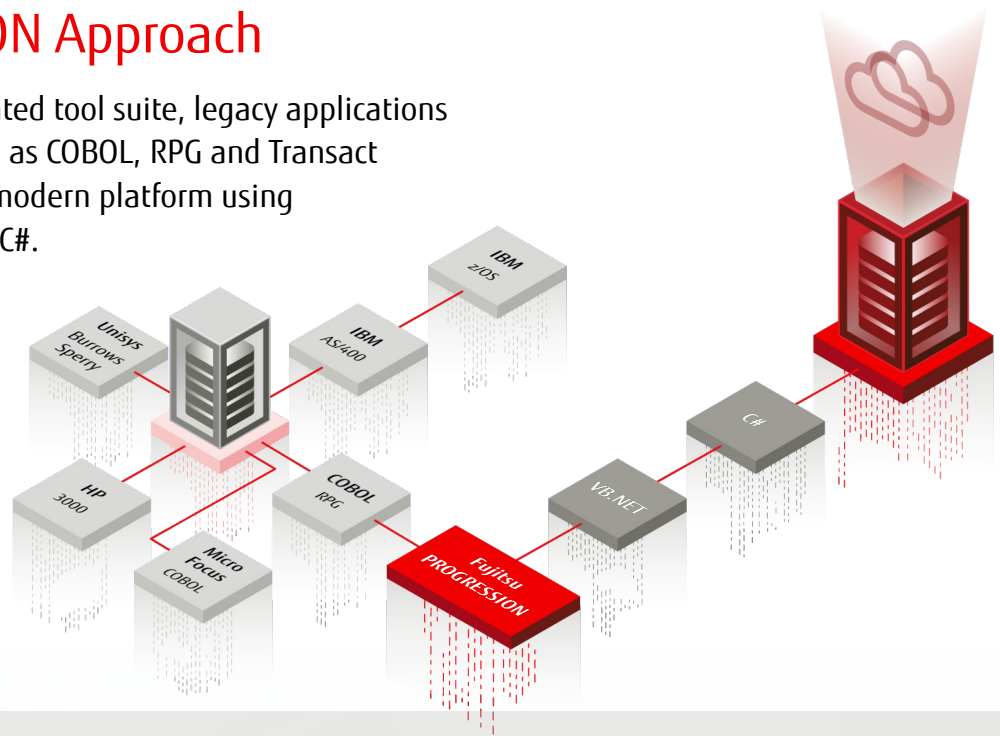

Your mainframe is holding you back. In order to meet your escalating business demands and reduce costs, modernisation is imperative.

... *It is time to act.*

... The PROGRESSION Approach

With the PROGRESSION automated tool suite, legacy applications developed with languages such as COBOL, RPG and Transact can be easily modernised to a modern platform using languages including VB.NET or C#.

Once the modernisation is complete, you own the source code – enabling you to maintain and provide immediate solutions moving forward.

... Minimising Risk

Our expertise in modernisation protects your valuable systems so that you can stay competitive with cutting edge technology.

Fujitsu have a proven methodology to mitigate the risk of migration. We can manage the crossover period where new and old systems run in parallel.

This minimises the risk of jeopardising your critical processes.

PROGRESSION from Fujitsu is designed specifically for you to modernise and revitalise your valuable systems and assets.

“

70% of IT decision-makers believe that less than half of their current applications can support the future digital strategy of their organisation.”

Pierre Audoin
Consultants (PAC)

... What does this mean for your business?

- ⦿ Fast ROI
- ⦿ Removes ageing legacy technology
- ⦿ End-to-end approach: From consultancy to modernisation, testing, delivery and ongoing services
- ⦿ You own the source code, with no runtime license fees
- ⦿ User interface enhancements are possible
- ⦿ Opportunity to simplify application portfolio
- ⦿ Aids compliance and legislation

We help you address issues such as vendor lock-in, high operating costs, technological redundancy, skills rarity and unacceptable time to market.

... Case Studies

PROGRESSION automated the conversion of 1.5 million lines of code, 110 database tables, 40 million data records and 867 business logic programmes – migrating away from the COBOL mainframe to a stable, reliable solution in a .NET environment.

- The new system is managed in-house without the need for expensive external consultants
- The modern platform does not require specialist COBOL knowledge meaning finding new staff with the right skills is much easier
- Its stability ensures maximum uptime and enables it to process 30 million transactions per year
- The interface is identical to the previous mainframe solution so employees are comfortable with using it and no special training is required

WADOL had a mature set of applications running on a Unisys 2200 mainframe. These applications, developed over 30 years, comprised of 1.5 million lines of COBOL code.

- Savings of over \$1 million per year
- Eliminated dependence on Unisys skills and contract staff
- Avoided a \$500k USD upgrade to Unisys mainframe to support ASCII
- Better systems integration, removing the need for awkward workaround processes
