- Elastic file storage
- Glacier
- NAS solutions

Databases:

- SQL Server on VM
- Oracle on VM
- Amazon RDS
- AWS Dynamo DB
- MySQL
- DB2
- MongoDB
- PostgreSQL

Complete management

Our Multi-Cloud Managed Services for Amazon Web Services (AWS) gives you freedom with costs. It scales up and down as your usage of the service changes. So, we:

- Manage configuration changes, and the implementation of new features within the estate.
- Monitor usage across the AWS estate to identify threshold limits and proactively identify faults.
- Support your business with issues related to your workloads on AWS, to ensure smooth running.
- Report on your operation including billing, change, incident and monitoring reports.

Complete confidence

We have a wealth of experience in managed services, and we've applied this knowledge to multi-cloud and hybrid infrastructures to give you complete confidence in the security and reliability of your estate. With our services, you can:

- Comply with regulatory requirements, thanks to three different locations: global delivery, delivery within the EEA, and in-country delivery.
- Implement our expert security policies within your AWS estate, giving you confidence that it's secure, compliant and resilient.
- Learn and receive help from over 300 staff accredited with AWS.

Fit for the future

We're focused on making sure your estate continues to deliver for you now, and in the future. How? Through:

- Agile service development, offering support for new features as you require them.
- Support for our own cloud platforms and those of other major providers.
- Further offerings to orchestrate within and between your different platforms, and provide further insight and visibility to continuously evolve your estate.

On your terms

Our Multi-Cloud Managed Services have been designed to be as flexible as AWS itself. You get:

- Daily charging for each day an individual component is used.
- No minimum or maximum number of components to be managed.
- SLAs designed around your specific needs.
