# Secure Backup as a Service

with Fujitsu's Secure Government Cloud Services

FUJITSU

Highly Secure, Enterprise Grade
PROTECTED Backup-as-a-Service

- Secure Backup aaS Solution
- IRAP Assessed services
- IRAP Assessed architectural patterns
- IRAP Assessed Cloud Platform
- Accredited PROTECTED Infrastructure

- Security cleared Staff to NV1 & above
- Cyber Resilience Centre
- All data stored in Australia
- AI Powered Service Monitoring
- Multi-Cloud ready

Secure Backup as a Service

With the Australian Government's Cloud Strategy, there is an urgent need for Government agencies to find a secure and flexible multi-cloud data backup and storage solution. When it comes to Australian citizen and government agency data, protection surety should be top priority.

For agencies and departments who require OFFICIAL:Sensitive or PROTECTED level security, Fujitsu has a set of services that can reduce the risk profile and accelerate the establishment of Secure Government Multi-Cloud Services – including Secure Backup as a Service (BaaS). This service enables you to deliver durable, georedundant protection for your critical business systems and data.

PROTECTED Enterprise Data

Redirect your focus from building an enterprise grade backup solution, to innovating and providing a first-class experience to end-users.

Fujitsu provides a Secure Backup solution with an 'as a Service' model, prioritising security and compliance within a PROTECTED environment.

PROTECTED Backup Solution

Consume a secure, flexible, and cost-effective backup solution to protect government agency and citizen data.

All data is stored within a dedicated environment that has been IRAP-assessed and fully compliant with current Australian Signals Directorate (ASD) Information Security Manual (ISM) controls.

Advance your multi-cloud journey with protection

Unlock the flexibility to backup to and from both Azure and Vault clouds, reducing risk, reducing platform lock-in, and improving overall data/service availability – advancing and supporting government agencies with their multi-cloud strategy.

Reducing Backup Complexity

Fujitsu has taken the guesswork out of architecting accredited workloads by developing our cloud architecture patterns that have been successfully accredited up to PROTECTED. Fujitsu has leveraged these patterns in developing our BaaS offering for agencies with PROTECTED data needs, taking the guesswork out of data backups.

Removing Management Tasks

Fujitsu can provide a fully managed service that takes care of backup configuration, schedules, set plans, monitor job progress and alerts, as well as perform restores all so the agency doesn't have to. While Fujitsu handles the timely administrative and management activities, agencies can focus on more urgent priorities.

Safeguard your data without the effort

Fujitsu's Secure Backup as a Service solution is hosted on our Secure Government Multi-Cloud Platform, protecting data within a server, physical or virtual, from full loss, and choice of select protection plans that align with the business value of the specific data.

Using Industry Best Practices

This Service is fully configurable and capable of delivering industry best practice 3:2:1 whereby all backup and archive copies are held at dual sites for high availability.

3: Keep at least three copies of your data that includes the original copy and at least two backups

2: Keep the backed-up data on two different media

1: Keep at least one copy of the data offsite

Providing Cost Efficiencies

Leveraging Fujitsu's Backup solution using an aaS model, provides greater flexibility by taking advantage of a monthly subscription service that can be scaled as your data grows.

Agencies also benefit from:

- Reduction of capital investment
- Lower cost expenditure and total cost of ownership
- Optimised network bandwidth and storage footprint

Securely backup your data with surety

Fujitsu's Secure BaaS solution provides agencies with a cost effective and flexible IRAP-assessed and fully compliant service from OFFICIAL:Sensitive or PROTECTED level on our Secure Government Multi-Cloud Platform powered by Microsoft and Vault.
