

The benefits of automation

As the new year has begun, your company may be trying to organise or implement automation or dashboards but are unsure how to start, and the steps needed to automate your reports.

It may seem impossible, and companies may feel it's easier to extract, transform and load data manually and then load these into Power BI for reporting and dashboards.

While this may work in the short term or seem like the easiest option, a permanent solution will save your organisation time, money and allow it to get access to accurate, timely and up to date data thanks to automatic refreshes.

Whether it be a data automation, systems integration or reporting and dashboards, we are passionate about data and helping your company organise, integrate and produce meaningful dashboards which inform data based business decisions.

This is where the Fujitsu Data & AI team can come in handy. We can help your organisation identify automation points, connect to and ingest data from cloud and on premise systems and create a central data lake or warehouse to make reporting easier and more efficient.

Throughout this process it is important to think about your end goals, be clear in requirements and then implement change, automations, and system improvements in partnership with a company and your stakeholders.

We can help you plan out the implementation, integration, design, testing and roll out of systems, dashboards and reports which will enable your organisation to have valuable insights into your systems, data and reporting as needed.

If your business needs help automating dashboard, please contact a Fujitsu Data & AI specialist now.
