Modern Workspace Windows 10

Digital Workplace Services

Fujitsu's Modern Desktop is built for today's workplace, where superior employee experience empowers employees to work whenever, wherever and however they choose. Delivered with a modern management approach to Windows 10, we provide guidance in selecting the right desktop to meet your employee's needs. Delivered as a full end-to-end service using all the usability and security features native to Windows 10, our service provides the foundation to drive productivity and mobility for your business.

In today's workplace employees require a consumer like experience, selecting their preference of a corporate owned or personal devices for the task they are working on. Their applications are a blended mix of business owned with personal preference, and they are accessed in different ways. This means the devices they use simply become tools to access their data and applications – but they must still be secure. This may require organisations to apply different levels of control over the devices, from locked-down access to lighter-touch management based on business demands. Windows 10 provides such flexibility allowing customers to select a mixture of configurations to meet their requirements.

The advent of Windows 10 offers many benefits and designed properly can really enhance your organisations productivity. The move to smaller, more frequent smaller upgrades, the ability to simplify access controls, the layering of cloud-enabled security services, the automation of tasks removing staff actions – this provides an enhanced experience allowing employees to enjoy a seamless, secure, modern environment.

At Fujitsu we help organisations to get the best out of Windows 10 by taking fresh approach to reducing the complexity of deploying, managing and updating devices. With core configurations aligned to your application deployment requirements and options to enhance the service, we have experience that will help you create a truly mobile workplace.

shaping tomorrow with you

Fujitsu's Modern Desktop – Feature Perfect

The heart of the employee experience is your employee's device, their desktop that delivers them their apps, data and productivity tools. To create a great experience, Fujitsu starts by taking into consideration your unique environment – your devices, your business demands, your risk profile. We then create a configurable Modern Desktop environment using one or more of three modern management designs; cloud managed, co-managed or the more traditional on premise managed.

Designed for a 'mobile-first, cloud-first' world, our service take into account the new landscape of security risks. Fujitsu delivers our Modern Desktop on Windows 10 with built-in security, including Windows Defender with Advance Threat Protection, ensuring your devices and data are secure. With options for always-on, single sign-on and biometrics Fujitsu simplify the experience of your employees and ensure your employees are provisioned for a great desktop experience

Fujitsu's Modern Desktop is designed to fit seamlessly with our Cloud Identity & Security and Office 365 productivity offerings, we can deliver a comprehensive Modern Workspace solution that is fully-managed and protected 24x7. Allowing your employees to work on any device, anywhere, wherever suits them best.

Taking the First Step – Moving to Modern Management

Fujitsu's consulting and deployment services help customers move to Windows 10 at a pace and style that suits your business. With Windows 10 readiness assessments, application packaging, and virtual workplace to resolve application compatibility, our services complement the Windows 10 deployment strategy fit for the needs of your employees and organisation, ensuring you achieve the outcomes you desire.

With a range of additional services to provide a comprehensive end-to-end experience, coupled with Fujitsu's extensive deployment services, we really can simplify and accelerate your move to Windows 10.

Why Fujitsu
