

Simple, Straightforward, and Powerful Capture Software

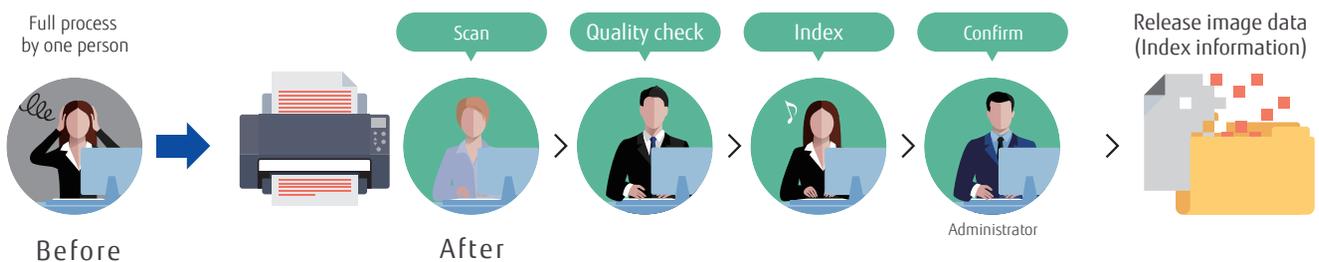

# PaperStream Capture Pro

PaperStream Capture Pro is a powerful front-end capture software that integrates seamlessly with FUJITSU scanners. It offers functions more advanced than those offered by PaperStream Capture, bundled with FUJITSU image scanners.

## Maximized productivity through easier work distribution

Scan, check, index, confirm, and release alone, or with several people by introducing the multi-station mode\*<sup>1</sup>. The entire digitization process is simple and enables easy task sharing, facilitating the sharing of responsibilities and the decrease of individual workload. Team managers can keep track of overall progress with utmost ease using batch manager. Utilize operation data keeping track of information, such as hours spent on each process, to improve general work efficiency.

## Perfect fit for crucial business operations

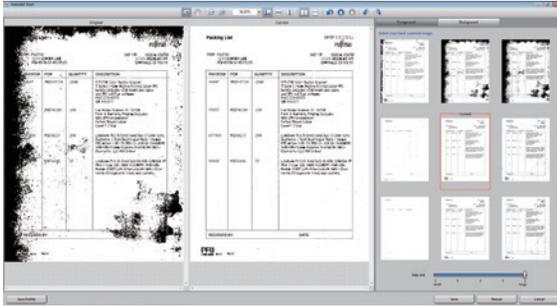

PaperStream Capture Pro supports a variety of sorting functions with up to 20 direct input values such as barcodes (including two dimensional codes) and OCR results. Accurate data input is enabled by providing each field with check functions of input values or a range of numbers. It automatically links sorted image files and indexed information to shared folders and FTP servers. Developing your own linkage application\*<sup>2</sup> to link image files and indexed information within your business system is now easier than ever before.

\*<sup>1</sup> To develop a multi-station structure, you need to set up two computers or more in all, a computer for a PaperStream Capture Pro Scan Station and at least one computer for a Scan Station or a QC/Index Station.  
\*<sup>2</sup> "PaperStream Capture Pro Release API" is available to establish a link with your business system. For details about how to obtain the API, contact your sales representative.

## Sharing Workflow

### After Scan Correction function Pro

Obtain better quality images without rescanning, by simply selecting from an edited thumbnail selection. These adjusted thumbnails are automatically generated and do not require specifying any complex parameters.

Simply select the optimal image from sample images

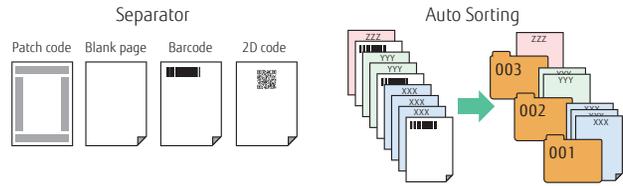

### Batch Manager

The batch manager is available for the team manager to grasp the progress of the entire process. PaperStream Capture Pro can collect its operation and aggregate information such as production efficiency or working hours for each process to use it as basic data for work improvement.

## Data Utilization

### Auto Sorting / Indexing Function

Automatically save scanned images into specified files or folders when scanning documents with patch code sheets and batches with blank sheets. Sort scanned images according to barcode or character strings. Recognized information can be added to folder names and outputted to index files.

### System Linkage

Save scanned images on networks and a variety of systems besides the typical folder.

\*Scanned images can be passed as arguments to an application. You can save scanned images in your business system by developing a linkage application.

| Destinations  |
|---|
| Folder / Network Folder                                 |
| Microsoft® SharePoint®<br>Microsoft® SharePoint® Online |
| FTP server (FTPS / SFTP)                                |
| Box   |
| Other Applications*                                     |

## Options That Make PaperStream Capture Pro More Useful Pro

### PaperStream Capture Pro QC / Index Station

You can form a work team by adding computers for a QC Station to check the quality of scanned images, and for an Index Station to enter or edit index information of the scanned images.\* Sharing responsibilities improves work efficiency.

\*If you form a work team that uses more than seven computers (including a computer that is set up for a Scan Station), you need to divide the team into several teams.

### PaperStream Capture Pro Import

This option allows you to import images created with other systems or images scanned in the past into PaperStream Capture Pro so that you can use a variety of effective functions for the imported images. It also allows you to output high quality images or link them with a system.

| Product Name                               | Part Number  |
