# PalmSecure™ ID Login

BioSec

FUJITSU

Password-free logins – easily secured

Simple yet safe

Nowadays, passwords have become part of our daily lives. Resulting in people using identical or similar passwords. Or even writing them down. But there is an easier way – and one that is even more secure. PalmSecure™ ID Login lets you access computing devices by simply using the palm of your hand. Instead of duplicate and weak passwords.

With a wave of the hand

Our ID Login solutions are based on FUJITSU PalmSecure™ biometric authentication technology. PalmSecure™ recognizes the complex and unique palm vein patterns hidden under our skin, which remain unchanged throughout our entire lifetime. This makes the method suitable for almost everyone and offers secure, yet exceptionally simple protection.
