

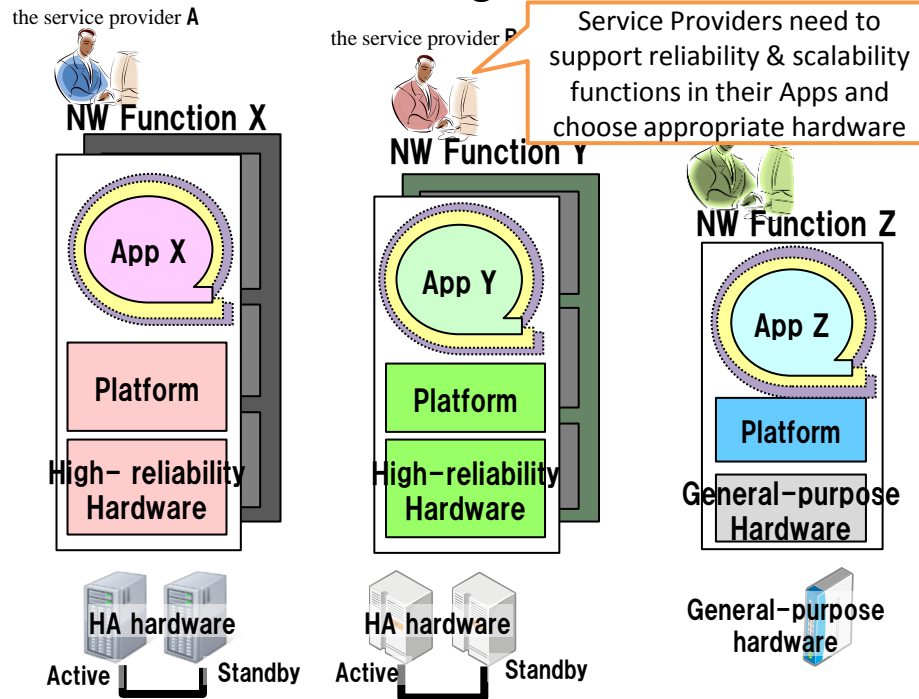

# Figure1. Proposed Proof of Concept

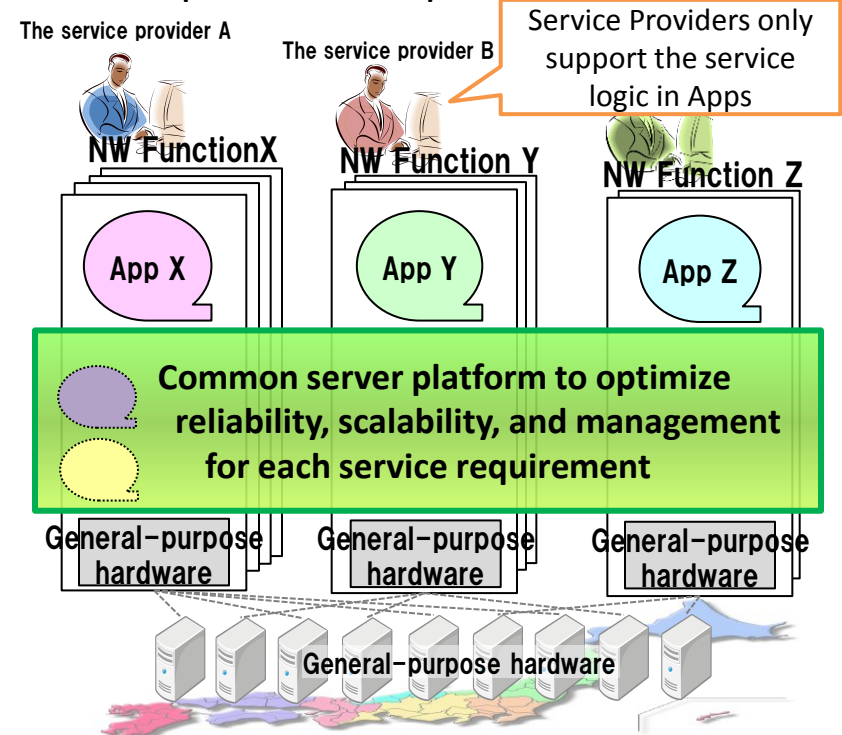

~The Virtual Network Platform as a Service(VNPaaS)~

- The Virtual Network Platform as a Service (VNPaaS) is a service that offers to the service providers a platform that has the framework for developing, deploying and administrating the applications on the virtualized network.
- Collaborative study solves this problem by developing server architecture as a platform of telecom networks with carrier-grade reliability, scalability and management.

## Current design scheme

## Proposed concept of architecture
