

“We need to mobilize all of the resources that exist in Catalonia. Creating flexible teams will allow us to respond dynamically.”

Alba Vergés  
Catalonia's Counsellor of Health

# Center for Telecommunications and Information Technology (CTTI)

Country: Spain  
Industry: Public services

## Challenge

To enable healthcare professionals throughout Catalonia to work remotely and collaboratively in response to the COVID-19 crisis. Healthcare teams need to be able to access critical files while working from home, or from new, temporary facilities.

## Fujitsu Solution

Fujitsu supports the application virtualization and resources to make remote working possible. The solution involves the use of VMware Cloud™ on AWS and Horizon® 7, and virtualizes to critical applications, including a patient's digital health record.

## Outcomes

- Supports remote working for up to 40,000 healthcare professionals
- Allows access to critical healthcare applications
- Enables Catalonia to develop a dynamic response to a fast-changing situation
