How Agile & DevOps can turbo-charge your enterprise’s imagination and competitive power

It’s not about technology, it’s about mind-set

Agile and DevOps are not tools, they’re new ways of thinking, experimenting, innovating and working. They enable IT and Operations to work as one team, focused on customer needs and outcomes, as well as boosting the efficiency and operational integrity of an enterprise.

What are Agile and DevOps?

They are methodologies not tools. IT and Operations working together. Developers, operators, administrators, business leaders, partners - everyone works as a team to make the business flexible, efficient and innovative. It’s about delivering improved and innovative customer outcomes.

Create in weeks not years

Speed is the currency of the digital era. Agile/DevOps delivers speed because teams work as one across a flat structure. They think, create, test and fail fast, proving concepts in weeks to get to market faster.

A new culture of imagination

Start a positive revolution

What are the key benefits?

You generate continuous, controllable transformation

Strategic, cross-functional integration, allowing improvements to be rapidly delivered

Shutter time for market

Improved efficiency and quality

Stronger collaboration and communication within teams

Optimal usage of tooling and automation to support the adoption of DevOps

Development cycles, which used to be predictable in nature, therefore now show substantial

Pre-paid Release

DevOps

What do you need to start?

The right training and assistance to empower your cross-functional teams, as well as an agile culture and way of working. At Fujitsu, we’ll begin by building shared cross-functional teams and start small, only. Then, Agile/DevOps can deliver quick wins to prove their worth and build from there.

Agile and DevOps are vital to your digital future

The only obstacle is culture

It isn’t rocket science. It’s a proven methodology, but many enterprises hesitate because the organizational impact seems daunting. But, with the right help, you can overcome that hurdle and get your internal processes fit for purpose.

At Fujitsu, we believe in delivering change step by step quickly, so you can achieve controlled upheavals. Our co-creation approach is unique: we bring together the right partners and technology to disrupt the way you work to create positive wins and transform your current working.

A recent ING Direct report shows DevOps is a constant work in progress within the vast majority of organizations, as it shapes the daily running of a business by maximizing flexibility, efficiency and innovation. Only 18% of the C-level audience that contributed to the research did not have a DevOps strategy or some level of adoption and may risk being left behind.

The old ‘waterfall’ approach to innovation just takes too long in an age of rapid digital change and disruption, harnessing by default departmental silos. It’s about delivering connected and innovative customer outcomes.
