The Fujitsu Declaration on Cybersecurity

In this age of ever-advancing ICT, everything is connected through networks, and social infrastructure is being built, entirely overwriting traditional concepts. We enjoy a wide variety of benefits, or value from intelligence generated from a huge volume of data and intricately interconnected services.

The source of these benefits and value is information that is distributed through cyberspace. As a company engaging in the ICT solutions business, we, the Fujitsu Group, are responsible for maintaining the security of cyberspace. We believe this cybersecurity initiative will contribute in delivering the stability and sustainability of the development of our society and it will be critical engagement for the Fujitsu Group's growth.

As a leading ICT solutions provider, the Fujitsu Group as a whole will make every effort to maintain cybersecurity in order to contribute to the creation of a stress-free and reliable network society, as described in the FUJITSU Way, and strive toward a future that enriches people's lives with infinite possibilities.

1. Our security initiatives as a global ICT company:
    - We will offer cybersecurity solutions including ICT products and services created with leading edge technology to protect cyberspace and contribute to the stabilization the international community.
    - We will offer comprehensive cybersecurity solutions to strengthen and expand our business and also to improve our corporate value.
    - As a socially responsible ICT company, we will aim for a free and healthy development of ICT systems.
2. Our internal security measures:
    - We will maintain cybersecurity and information security for the entire corporate group by meeting and conforming to domestic and international standards, laws and regulations, clearly defining our cybersecurity and information security policies and making sure to implement them.
3. Our security initiatives for both inside and outside the group:
    - The corporate group as a whole will engage in activities based on a comprehensive security strategy.
    - We will combine and effectively use our internal security know-how and wisdom gained from working with our customers.
    - We will systematically develop human capital with high-level cybersecurity competencies.
    - To keep up with sophisticated attacks, we will continue focusing on research and development in pursuit of new technology.
    - Both inside and outside Japan, we will build an ecosystem of human capital development, information sharing, technical development and investments to promote healthy industrialization of the security business.
    - We will respect the dignity of all individuals and give full consideration to prevent security measures from violating privacy or basic human rights.

    More specifically, we will implement the following strategy:
    - We will continue offering technologies and services that secure our customers' business continuity and minimize damage not only in detection of and protection from cyberattacks but also in handling them.
    - We will provide our customers a business environment where they can feel secure in this age of IoT, in which a wide variety of devices such as sensors are used.
    - We will support our customers building comprehensive security measures including human resources and business processes and also help them develop human resources to improve organizational durability.
