## Formulation of the Stage VI Fujitsu Group Protection Program

### Establishing New Targets for Environmental Programs Between FY2010 to FY2012

In April 2010, we created Fujitsu Group Environmental Protection Program (Stage VI) to run from fiscal 2010 to the fiscal year ending March 31, 2013 (FY2012).

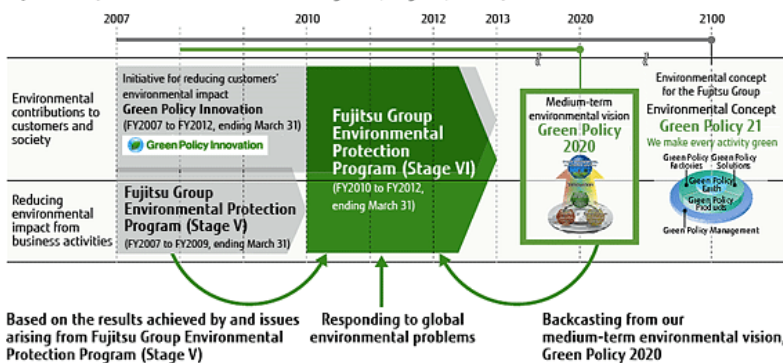

The program is based on the three targets established in the Green Policy 2020 of benefiting customers and society, pursuing internal reforms, and preserving biodiversity, and defines six key areas: strengthening advanced green ICT R&D, improving the environmental value of products and services and strengthening the development and provision of green ICT, strengthening efforts to reduce the environmental burden from the Group itself, strengthening our foundation for environmental management, promoting activities that make environmental contributions to society, and promoting activities that preserve biodiversity. Moreover, we have established a further 18 items to serve as specific program targets.

### Aiming to Resolve Environmental Problems From a Global and Long-Term Perspective

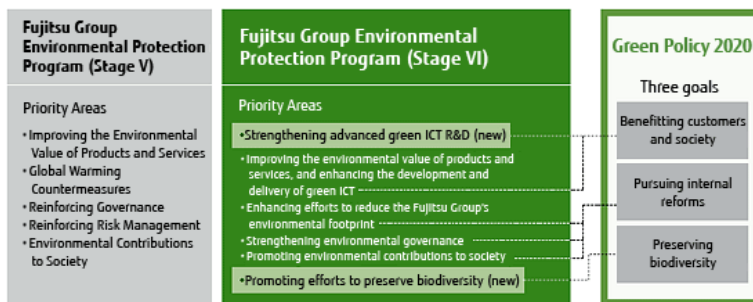

Fujitsu Group Environmental Protection Program (Stage VI) has been created based on the backcasting of our Green Policy 2020 - our medium-term environmental vision - and also the global environmental problems of recent years such as climate change and vanishing biodiversity. In the Program, we have newly positioned "strengthening advanced ICT R&D" and "promoting activities that protect biodiversity" as our two priority areas.

Moreover, we have created the following new targets for the Program: advanced ICT R&D; based on scientific findings and forecasts until 2020, a 6% reduction in global greenhouse gas emissions from our business activities by the end of fiscal 2012 compared to fiscal 1990; and the creation and management of quantifiable targets to measure our business activities' impact on and contribution to biodiversity.
