Listed below are the principal business and other risks affecting the Fujitsu Group (Fujitsu Limited and its consolidated subsidiaries) that we believe may influence investors’ decisions. With a view to proactively disclosing information to investors, we have also included items that may not necessarily have significant bearing on such decisions. We are aware of these risks and are making efforts to prevent them from arising, avoid potential risks altogether and immediately confront risks should they occur. Among the risks listed below are some items related to future developments, but the list only includes items that the Group deems necessary to publicly disclose as of the date of submission of its securities report (June 23, 2008).

1. Economic and Financial Market Trends
Economic and financial market trends have an impact on the Group’s business results, financial base and other aspects of its operations. Examples of such risks are listed below.

1) Economic Trends in Key Markets
The Fujitsu Group provides IT products and services, telecommunications infrastructure equipment, as well as semiconductors, hard disk drives (HDDs) and other components, to corporate and institutional clients and consumers in every region of the globe. Hence, sales and income generated from these operations are greatly affected by economic conditions in each respective market. This is particularly true of Japan, North America, Europe, and Asia (including China), key markets where economic trends can significantly impact Fujitsu Group operations.

2) High-tech Market Volatility
The IT sector is periodically subject to dramatic changes in the balance of supply and demand that exceed the scope of normal cyclical market variations. This tendency is particularly evident with regard to semiconductors, PCs, and other general-purpose products. The Fujitsu Group gives ample consideration to market cycles and volatility when deciding to launch new products, initiate volume production, or scale back production, among other actions. Nonetheless, we may fail to accurately forecast market changes, or changes in market conditions could exceed our forecasts. Accordingly, there is a risk that we may be unable to recoup investment costs, as well as the risk of opportunity losses. Further, the Group continuously implements structural reforms in a bid to respond to market changes. However, drastic market changes could force us to enact structural reforms on a far greater scale than initially expected, resulting in a temporary increase in related expenses.

3) Exchange Rates
The Fujitsu Group imports a substantial amount of components and materials and exports various products. While import and export costs tend to roughly balance out over the course of a given year, sudden fluctuations in exchange rates and other factors could force the Group to incur losses on foreign currency translation. In addition, with respect to overseas assets held by the Group, as well as liabilities, there is the possibility that exchange rate fluctuations could lead to depreciation of assets and/or appreciation of liabilities.

4) Interest Rates
The Fujitsu Group has interest-bearing loans which include debt directly impacted by interest rate fluctuations. Consequently, rising interest rates could increase borrowing costs.

5) Capital Markets
Stock market trends in Japan and overseas have a substantial effect on the value of Group stockholdings in other companies and the management of pension assets. Weak stock market performance could thus force us to incur losses on the devaluation of marketable securities held or a reduction in pension assets, exposing the Group to the risk of higher losses.

2. Customers
Fujitsu Group operations are highly influenced by the business trends of strategic key customers. Examples of potential risks are described below.
1) Changes in Customers’ IT Investment Trends
A large proportion of our IT systems and services, as well as communications infrastructure and other business, is with telecommunications carriers, financial institutions, and large manufacturers. The business environment within these industries, including shifting market trends and structural reforms, could lead to changes in customers’ IT investment trends, having a significant impact on Group sales and profitability. In semiconductors, HDDs and other operations where the Group provides components and other products, both demand and prices are impacted to a large extent by customers’ sales and inventory adjustments of PCs, digital home electronics, mobile phones, automobiles and other products in which these parts are used. Accordingly, soft demand and falling prices for customers’ products, or a decline in customers’ market share, could negatively impact Group sales and earnings.

Alongside corporate clients, national and local governments represent another important customer base for the Fujitsu Group. In the UK, for example, government-related projects are an especially important part of our business. Accordingly, changes in the approach to e-Government and other national-level IT utilization policies being promoted in Japan and elsewhere could impact sales and profitability.

2) Ability to Maintain Lasting Ties with Customers
The Fujitsu Group is committed to bolstering ties with customers, striving to serve as a business partner and provide solutions across the full IT system lifecycle. For semiconductors, HDDs and other operations where the Group provides components and other products, business stability hinges on maintaining lasting ties with customers that represent key sources of demand for our products. An inability to secure repeat business and retain contract relationships with such customers could therefore affect sales and profitability.

3. Competitors/Industry
The IT sector is characterized by intense competition and fast-paced technological innovation. Events within the industry or actions by competitors could therefore have a substantial impact on our business results. Examples of such potential risks are listed below.

1) Price Competition
Intensifying competition is directly linked to declining prices for products and services. Anticipating such technology- and competition-driven price erosion, we are pursuing a variety of measures to reduce costs, including the introduction of Toyota Production System reforms, standardization of system development methodologies, and software modularization, as well as efforts to expand sales of new products and services. Despite these steps, the Group still faces the risk of larger-than-expected declines in prices, as well as the risk of being unable to achieve sufficient cost reductions and sales growth due to fluctuations in the price of semiconductors and other components, either of which could negatively impact Group sales and profitability.

2) Competition from New Market Entrants and Others
In addition to challenges posed by existing industry peers, competition from new market entrants continues to intensify in the IT sector. Today, new entrants continue to emerge in market areas where the Fujitsu Group wields a competitive advantage, thus entailing the risk that we may lose our competitive edge, or fail to secure a clear competitive advantage in future business operations.

3) Competition in Technology Development
Technological advancement in the IT sector occurs at an extremely fast pace, leading to rapid turnover in new products and technologies. In this context, remaining competitive requires the continuous development of state-of-the-art technology. While the Fujitsu Group does its utmost to maintain highly competitive technologies, a loss in competitiveness versus other companies in the race to develop innovative technologies could lead to a decline in the Group’s market share and profitability, which would negatively impact sales and earnings. Further, sales and profitability could be affected by the development of groundbreaking technologies and other actions by competitors that would severely compromise the value of the Group’s products and services. Additionally, there is also the risk of an adverse effect on sales and profitability as a result of the time it takes to implement mass-production chip technologies for semiconductors, such as in solving technological issues concerning cutting-edge process development technology.
4. Suppliers, Alliances, etc.
In the course of its operations, the Fujitsu Group conducts business with a range of different companies, including suppliers and alliance
partners. Accordingly, any significant changes in relationships with these and other business partners could affect the Group’s business.

1) Procurement
The Fujitsu Group utilizes sophisticated technologies to provide a range of products and services. There is therefore a risk that we may
encounter difficulties in procuring a stable supply of certain key components or raw materials, or in cases where regular supply channels
are unavailable, that we may be unable to secure alternative procurement sources. There is also the risk that the Group may be unable to
sufficiently procure certain parts or raw materials in the large volumes required. Moreover, natural disasters, accidents and other events, as
well as any deterioration in business conditions at suppliers, could hinder the ability of business partners to provide the Group with a
stable supply of required components or raw materials. These and other events could cause delays in the provision of products and ser-
vice, resulting in postponement of deliveries to customers and opportunity losses, among other problems. With respect to component
procurement, foreign exchange rate fluctuations, tight supply and demand conditions, and other pressures could drive procurement
costs higher than initial estimates, leading to diminished returns on products and services, as well as lower sales due to the need to raise
prices. Additionally, while we make every effort to ensure the quality of procured components, we cannot guarantee that all components
purchased will be free of defects. The discovery of such issues could result in processing delays, as well as defective products, opportunity
losses, repair costs, and disposal costs for defective goods, plus the potential obligation to pay damages to customers.

2) Collaborations, Alliances and Technology Licensing
To enhance competitiveness, the Fujitsu Group works with a large number of companies through technology collaborations, joint
ventures and other means, a practice that we intend to continue for the foreseeable future. If, however, as a result of managerial,
financial, or other causes, it becomes difficult to establish or maintain such collaborative ties or to gain sufficient results from them, the
Group’s business could be adversely affected. Moreover, many of our products and services employ other companies’ patents, tech-
nologies, software, and trademarks with the consent of their owners. However, there is no guarantee that other companies will con-
tinue to grant or license the right to use their property under terms acceptable to the Fujitsu Group.

5. Public Regulations, Public Policy, and Tax Matters
The business operations of the Fujitsu Group are impacted by a variety of public regulations and trends in public policy, as well as laws
pertaining to taxation. Specifically, wherever it operates, the Group must comply with a variety of regulations, such as authorizations
for business or investment, import/export regulations and restrictions, as well as laws pertaining to antimonopoly policies, intellectual
property rights, consumers, the environment and recycling, labor conditions, and taxation. Earnings might be affected by increased
compliance costs associated with measures to make stricter or otherwise revise such laws and regulations. We also provide solutions
in certain fields and business domains such as healthcare and communications that are subject to other public regulations, meaning
that regulatory trends in these sectors may potentially impact the Group’s business.

6. Other Operational Risks
The Fujitsu Group makes every effort to eliminate known risks but can offer no guarantee of its ability to always achieve every desired
outcome in the course of executing business operations. Some of the specific risks faced in this respect are detailed below.

1) Deficiencies or Flaws in Products and Services
Quality is a core value of the Fujitsu Group. We are committed to improving quality at the design and development stages as well as in
manufacturing. We are also promoting stricter quality control when purchasing components from external suppliers. These efforts not-
withstanding, it is impossible to totally eliminate the possibility of deficiencies or flaws occurring in products, including software. While
the Group is also promoting software modularization, standardization of development work, and enhanced security measures in order
to improve the quality of system development and other services, the possibility of defects arising cannot be excluded. With respect to
systems that play a critical role in supporting social infrastructure, following the incidents involving system problems at the Tokyo Stock
Exchange in November 2005, we have been checking for any potential problems in these systems, including the operating environment,
software and hardware, in cooperation with our customers. We cannot, however, entirely eliminate the possibility of deficiencies or flaws. In the event that such deficiencies or flaws occur, the Group may have to initiate product recalls or repairs, engage in system recovery work, pay damages to customers or suffer opportunity losses, all of which would negatively impact Group sales and profitability.

2) Project Management
Due to such factors as the increasing scale of systems and more rigorous demands from customers, as well as the advance of open system environments, system development work is becoming increasingly complex. At the same time, greater competition is leading to increasingly intense pricing pressures. To deal with this situation and prevent incidences of loss-generating projects, the Systems Integration Assurance Unit, which reports directly to the president, has taken the lead in revising our approach to making contracts with customers, advancing the standardization of sales and system engineering business processes, and working to manage risk from the business negotiation stage through actual project implementation. The Group continues to maintain reserves for losses as necessary. In addition, we are striving to industrialize the system development process in order to strengthen our cost competitiveness. Nevertheless, in spite of these measures, there is a possibility that we may be unable to completely prevent the occurrence of loss-generating projects.

3) Investment Decisions
In the IT industry, large investments in R&D, capital expenditure, and business acquisitions are necessary to maintain competitiveness. Accordingly, the success or failure of investment choices has a profound effect on the business results of the Fujitsu Group. When making such investment decisions, we give ample consideration to a range of factors such as market trends, customer needs, the superiority of Group technologies, the financial performance of acquisition candidates and our business portfolio. There is, however, the risk that markets and technologies, as well as acquisition candidates deemed attractive by the Group, may fail to grow as anticipated, or that supply and demand imbalances or price erosion may be more severe than expected. Investment in semiconductor facilities and equipment represents one such area with a high degree of risk. In addition to substantial funding requirements, this field is characterized in particular by short product cycles, major changes in the market landscape and stiff competition from other companies. The Group takes a number of steps to mitigate this risk, including responding to these inherent fluctuations by dividing investment into multiple phases and forging agreements with customers prior to investment. Nonetheless, there is no guarantee that the Group can generate sufficient returns on such investments.

4) Intellectual Property Rights
The Fujitsu Group has accumulated technologies and expertise that help distinguish its products from those of other companies. Legal restrictions in certain regions, however, may impair our ability to fully protect some of the Group’s proprietary technologies, with the result that we could be unable to effectively prevent the manufacture and sale of similar products developed by third parties using the Group’s own intellectual property. Moreover, the creation of comparable or superior technologies by other companies could erode the value of the Group’s intellectual property. The Group has instituted internal policies, including stringent clearance procedures prior to launching new products and services, to ensure that no infringement of other companies’ intellectual property occurs. However, there is the possibility that the Group’s products or technologies may be found to infringe on other companies’ intellectual property, and that earnings may be impacted by such consequences as the need to pay for usage rights or cover costs associated with having to modify designs. In addition, the Group has previously instituted a program to compensate employees for innovations that they make in the course of their work, and will continue to implement this program in the future in accordance with the revision of Japan’s patent laws. Nevertheless, the Group faces potential risk from lawsuits initiated by employees in regard to compensation for innovation created in the workplace.

5) Human Resources
The growth and profitability of the Fujitsu Group depends heavily on human resources. As such, a major issue for the Group is the ability to recruit and foster talented technical experts, system engineers, managers and other key personnel; the inability to do so could negatively impact the Group’s growth and profitability.
6) Environmental Pollution
While committed to minimizing environmental burden in accordance with the Fujitsu Way and the Fujitsu Group Environmental Policy, the Group cannot guarantee that environmental pollution will not occur as a result of its operations. Moreover, although we monitor soil and wastewater as well as engage in clean-up activities at former factory sites, this does not mean that pollution will not be found at such sites in the future. In the event that environmental pollution were to occur or be identified, clean up and other costs could be incurred, which would adversely affect the Group’s earnings.

7) Information Management
In order to safeguard the personal and confidential information of customers and business partners, the Group has taken such measures as establishing strict regulations, instituting training programs for employees, and providing consultation to business subcontractors. Nevertheless, the Group cannot absolutely guarantee that information will not be leaked. In the unlikely event that this should occur, trust in the Fujitsu Group could decline and the Group may be obligated to pay damages to customers.

8) Credit Ratings and Other Factors that Affect the Group’s Credit
In addition to having a major influence on financing, credit ratings by outside institutions serve as reliable sources of information when conducting transactions with business partners. Lower credit ratings caused by failure to meet earnings targets, deteriorating financial conditions and other reasons could influence our ability to procure needed funds and place the Group at a disadvantage in bidding for projects and in other business dealings.

7. Natural Disasters and Unforeseen Incidents
Natural disasters and other unforeseen situations could have a major impact on the business results and financial standing of the Fujitsu Group. Examples of the potential risks posed are found below.

1) Damage from Earthquakes, Other Natural Disasters and Accidents
The Group has taken measures to make its business sites more resistant to earthquakes and conducts regular inspections and disaster readiness drills. Nevertheless, there is a possibility that the Group may be prevented from continuing operations due to damage to facilities and equipment or interruptions in the supply of electricity or water as a result of earthquakes or other natural disasters and accidents. Such occurrences could interrupt shipments to customers or disrupt shipments of parts for the Group’s internal use, thereby affecting factory production at other Group business sites. Semiconductor fabs and other plants where high-precision processing is carried out are particularly susceptible to the effects of earthquakes and other events. In the wake of such incidents, some time may be required to resume normal operations due to the array of highly specialized equipment and devices used at these sites. Damage caused by natural disasters may also hinder our ability to provide information system support for Group customers, which could interrupt their business activities.

We have a well-developed system in place to ensure the integrity and stable operation of critical in-house networks, which are a key element of our business infrastructure. However, the Group cannot guarantee its ability to prevent invasive computer viruses and other disruptions from impeding network operations.

2) Geopolitical Risk
Conflicts, political instability, currency crises, natural disasters, epidemics or other events in nations or regions where the Fujitsu Group operates could have a significant impact on its businesses.

8. Financial Statements
For more information, please refer to the section, “6. Critical Accounting Policies and Estimates,” on page 86.
