## Green Procurement

To provide customers with products and services that have a light environmental footprint, we are implementing green procurement in concert with our business partners.

### Procurement Activities Based on Green Procurement Direction

The Fujitsu Group summarized what it asks of its business partners when purchasing green parts, material and products in the "Fujitsu Group Green Procurement Direction" and is promoting green procurement activities with domestic and international business partners. We have five requirements (table below) for our business partners and promote procurement from business partners that fulfill these requirements.

Using an original Environmental Survey for business partners, we investigate the situation with regard to business partners' EMS construction, CO<sub>2</sub> emission control/reduction, biodiversity preservation and water resource preservation activity, and ask them to take appropriate measures.

#### Green procurement requirements for business partners

Requirements	Materials/parts business partners*	Non-materials/parts business partners
① Establishment of environmental management systems (EMS)	○	○
② Compliance with regulations for Fujitsu Group specified chemical substances	○	—
③ Establishment of chemical substance management systems (CMS)	○	—
④ CO <sub>2</sub> emission control/reduction initiatives	○	○
⑤ Biodiversity preservation initiatives	○	○

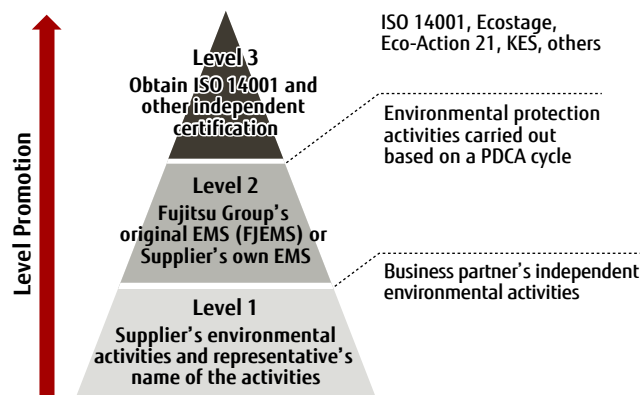

\* **Materials/parts business partners:** Business partners who supply components of Fujitsu Group products or OEM/ODM products

### Establishment of Environmental Management Systems

We request our business partners to establish an environmental management systems (EMS) to ensure that they continuously implement environmental burden reduction activities. We also conduct surveys to determine their EMS level (refer to the following diagram). For business partners whose survey responses indicate a level 1 EMS, we will provide the Fujitsu Group's original EMS (FJEMS\*1) and support the business partner's independent EMS efforts.

\*1 **FJEMS:** The Fujitsu Group's own EMS, which has requirements drawn from ISO 14001 requirements and aims to promote environmental protection activities based on a PDCA cycle.

#### Establishment of EMSs for Green Procurement

### CO<sub>2</sub> Emission Control/Reduction Initiatives

We have made CO<sub>2</sub> emission reduction, an important issue in environmental conservation, a requirement for green procurement from our business partners, and we ask them to carry out CO<sub>2</sub> emission reduction and control activities with target amounts. (See Page 37.)

### Acquiring Information on Chemical Substances Contained in Products

The Fujitsu Group is investigating information on chemical substances contained in suppliers' products by using AIS\*2 and MSDSplus\*3 offered by JAMP.\*4 The investigations take place when products are designed, designs are changed or business partners are changed, and information gathered is shared through our internal chemical substance information management system. To address chemical substance management through the value chain as a whole, we plan to appeal to primary business partners and those further up the value chain in the future.

Also, we are proactively participating in activities to standardize investigations related to green procurement promoted by JAMP and others.

\*2 **AIS (Article Information Sheet):** Information sheet for information on chemical substances in molded products.

\*3 **MSDSplus (Material Safety Data Sheet plus):** Information sheet for information on chemical substances in chemicals and preparations.

\*4 **JAMP:** Joint Article Management Promotion-consortium

### Establishment of a Chemical Substance Management System (CMS) for Product Substances

The Fujitsu Group asks its business partners to establish a chemical substances management system (CMS) based on JAMP guidelines on the management of chemical substances contained in products.

We carry out CMS audits where Fujitsu's auditors directly confirm the management of chemical substances at the business partner's manufacturing bases, and if the system established is inadequate, auditors make requests for corrections and provide support. Afterwards, we regularly confirm the system state and its operational status through periodic audits. With the understanding of our business partners, the Fujitsu Group will continue carrying out management of chemical substances included in products.
