Solutions to manage all multiple parallel planning, development, and investment projects

SAP® Portfolio and Project Management

SAP® Portfolio and Project Management (SAP PPM) is an integrated portfolio and project management solution that centrally manages information from the management level to the tasks performed by project managers. With PPM, you can manage the business units that make up the company such as research and development, new product development and internal investments through the portfolio management function, and the project management function that manages business units from planning to completion.

Solution Concept

What is SAP PPM?

It is an integrated portfolio and project management solution that centrally manages information from the management level to the tasks performed by project managers. With PPM, you can manage the business units that make up the company such as research and development, new product development and internal investments through the portfolio management function, and the project management function that manages business units from planning to completion.
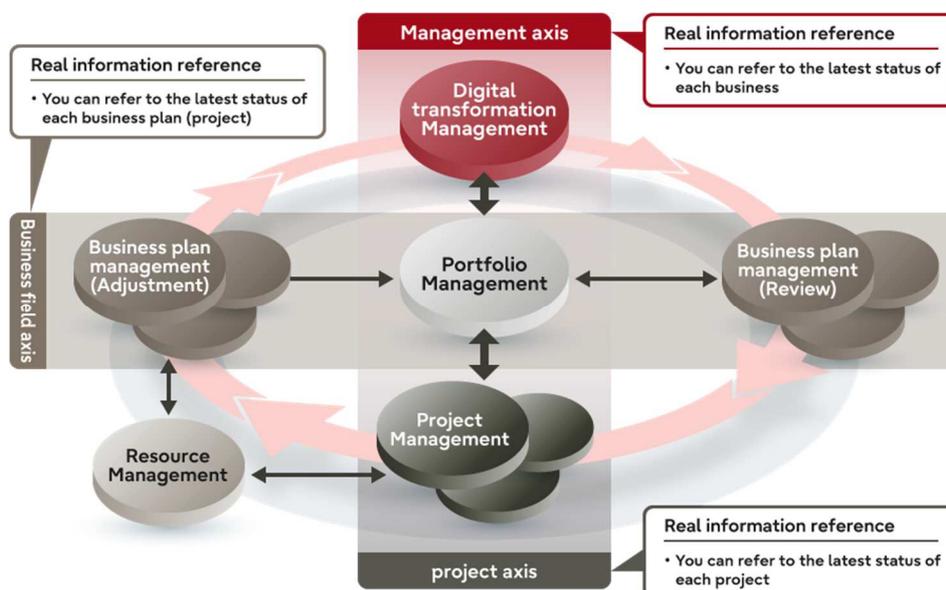

■ Features of SAP PPM

☑ **Portfolio management from the perspective of a business area manager**

Manages multiple projects within an organization from review and approval to completion from the perspective of a business manager.

PPM provides business management functions, such as budget management and review management based on a hierarchical structure, which is important for the management of business areas.

☑ **Portfolio item management from the perspective of a business plan manager**

Manages single business plan approval to completion from the perspective of a manager. It provides LCM functionality for business plans by managing with version numbers for various risks, KPIs, budgets, and performance changes during planning, execution, and completion.

☑ **Project management from the perspective of a project manager**

Manage the individual projects that make up the business plan from start to finish from the perspective of a project manager. Real project performance is linked to the project portfolio management function

■ Solution value proposition

Standardization of portfolio management

Standardization of project management

Provides an integrated platform for the centralized management of business areas and projects

・Provides "Realizable Fit to Standard" through realization scenarios for process standardization and customized settings.

・You can manage the history of goal and plan changes, and manage business goals following the changes.

・Increases the transparency of your business plan, detects anomalous risks and enables dynamic optimization.

・Provides "Realizable Fit to Standard" through realization scenarios for process standardization and customized settings.

・Allows users to prioritize tasks by matching goals with appropriate activities to optimize the use of resources.

・Project tracking integrated with the business plan gives you instant access to the latest status of your business plan.
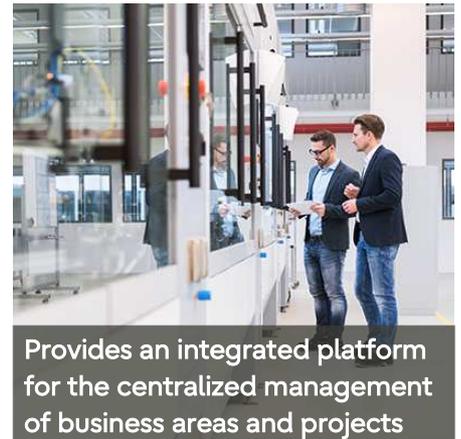

・Batch linkage reduces manual management work to a minimum.

・Up-to-date project information: Up-to-date information that management can see to have quick access to the latest information.

・Provides an integrated platform for DX management and strongly supports the further development of DX by leveraging internal and external information.
