

Datasheet FUJITSU Software Symfoware Analytics Server

PostgreSQL based Data Warehouse & Analytics for Enterprise Big Data

**Optimal analysis at front-end business
+ Holistic DWH
= Maximum BUSINESS POWER**

The amount of information keeps on growing so faster and so larger because of market diversification and rapid changes in the surrounding business. In order for business to accurately understand trends in the ever-changing market and make more appropriate management decisions, it is very important to collect the real-time value from very large volumes of a wide variety of data in business front, by enabling high velocity capture and analysis.

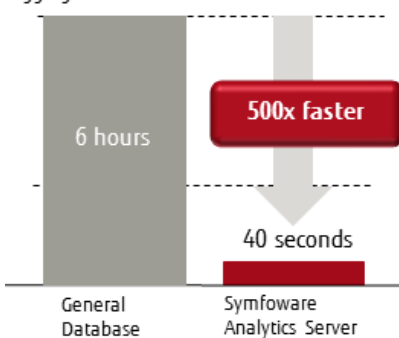

Fujitsu Software Symfoware Analytics Server is most powerful Data Warehouse and Analytics software. Symfoware Analytics Server is truly an all-in-one software for entire analytics process, covering data extraction/collection, transformation, analysis, visualization and automated action on business process. Using Symfoware Analytics Server, the business front person can fully exploit the real-time data analysis at the appropriate timing without any specific analytic skill and/or expertise. This effective and efficient data analysis for business front helps to quickly gain in-depth insight to market condition and take steps to improve the business performance and hospitality at the front-end business.

Why Symfoware Analytics Server?

High-speed data collection and analysis

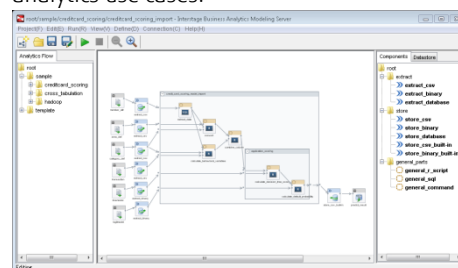

With column-oriented data store and the indexing of all columns, Symfoware Analytics Server ensures dramatically faster ad hoc search of large volume data. In addition, Symfoware Analytics Server supports Fujitsu's proprietary Smart Software Technology to automatically detect and optimize the status of hardware and applications without any manual turning. These technologies enable data processing to be 500 times faster.

Aggregate calculation with 600 million data

Built-in analytics algorithms

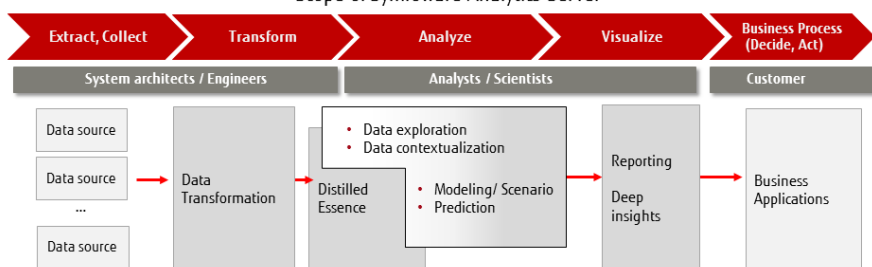

Fujitsu has extensive experience in the implementation of analytics service. Symfoware Analytics Server bundles more than 200 analytics algorithm templates based on Fujitsu's expertise in Big Data & analytics area. These analytics algorithm templates yield highly accurate and automated analysis and prediction. Furthermore, Symfoware Analytics Server is not only rich in features, it is also very easy to use and is a great fit for a wide range of analytics use cases.

PostgreSQL interface

Symfoware Analytics Server supports PostgreSQL interface, as standard interface. This enables it to efficiently use a various BI tools, application packages and development tool, such as ERPs and list creator tools, without modification. Symfoware Analytics Server makes the comprehensive analytics infrastructure using of multiple data sources.

Scope of Symfoware Analytics Server

More information

Fujitsu OPTIMIZATION Services

In addition to FUJITSU Software Symfoware Analytics Server V12, Fujitsu provides a range of platform solutions. They combine reliable Fujitsu products with the best in services, know-how and worldwide partnerships.

Dynamic Infrastructures

With the Fujitsu Dynamic Infrastructures approach, Fujitsu offers a full portfolio of IT products, solutions and services, ranging from clients to datacenter solutions, Managed Infrastructure and Infrastructure as a Service. How much you benefit from Fujitsu technologies and services depends on the level of cooperation you choose. This takes IT flexibility and efficiency to the next level.

Computing products
