Fujitsu PC-as-a-Service

Choose choice

Pre-deployment. Rollout. Support. Recycling. And everything that comes in between. Whatever services you choose, choose choice with Fujitsu PC-as-a-Service (PCaaS).
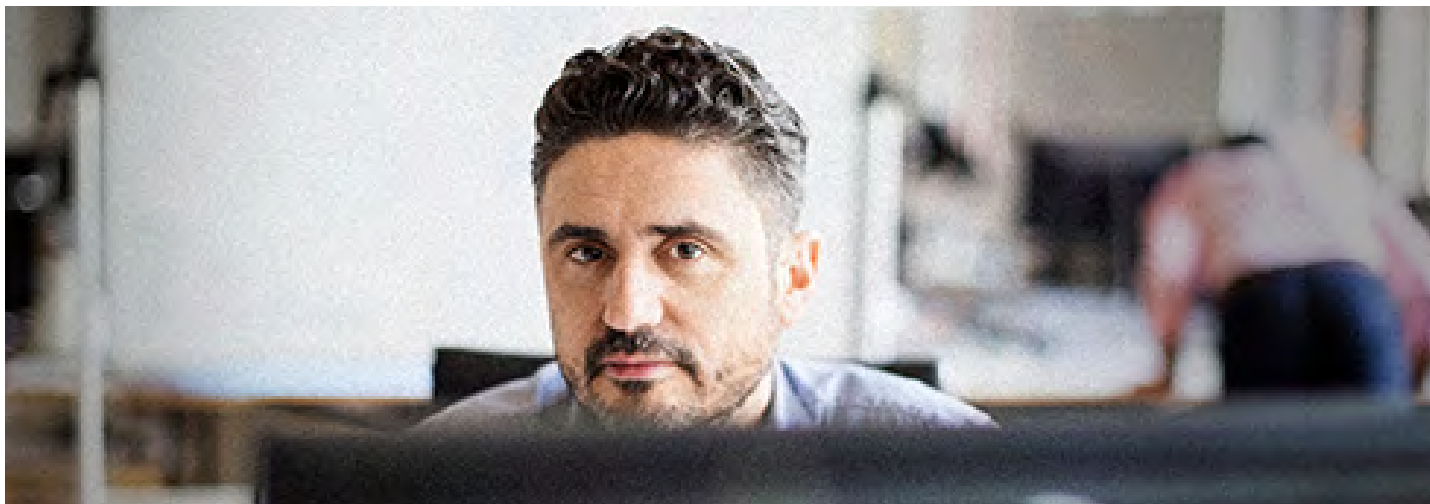

PCaaS gives you a wide range of services to choose from. So, employees can work their way. Your finances can go further. And your IT team can outsource what they want to and focus on what they need to – rather than managing company-wide IT deployments.

From 50 to 5,000 seats, Fujitsu PCaaS gives you the choice to, well, choose. Read on to find out how.

shaping tomorrow with you

FUJITSU

A range of benefits

Get smart with your budgets

Shift from CAPEX to OPEX with a single all-in-one monthly payment. This includes devices, support and, of course, your choice of services.

Deploy with zero touch

Your IT team won't have to do a thing until all your users are up and running. From our factory to your desks, we take care of it all. So, you can choose to spend less of your time on manual tasks and more of it on strategic thinking.

Keep your people productive

With PCaaS, employees get up-to-date tech that fits their needs. If you want, you can add managed rollouts and ongoing support to keep productivity up and downtime down. So, your people can focus on more valuable work.

Attract and keep talent

With new devices every three years and a recycling service for your old tech, you can appeal to candidates and employees alike, and be more sustainable and responsible than ever.

Go beyond the physical

Give your people access to cloud desktops and meet the needs of mobile workers and flexible workspaces. We can cater for your users who need to share devices, access their desktops on the go from multiple devices or regularly work from home. Whatever space they're in, and however they choose to work, your modern workers will stay connected.

Ready when you are

PCaaS has five steps. You can choose one, choose them all or choose something in between. Get in touch with us to find out more about our PCaaS services.

Devices – A choice of devices

Tell us about your people; we'll tell you which services and devices could be the best choice. From task workers and knowledge workers to executives and designers, you pay for what you need on a per-user, per-month basis. Whoever they are, they'll be able to do their best work on a Windows 10 desktop – either on premise or in the cloud, using our virtual Desktop-as-a-Service (vDaaS).

Pre-deployment – Primed for the job

Once you and your people have chosen what you need, one of our dedicated service delivery managers gets to work at our technical integration centre. Servicing starts by building each device to your custom specifications. Then we test, tag and apply the BIOS settings. When you're ready, we'll send them to the site of your choice.

Roll-out services – Ready to roll

Our services go further than delivery. When your devices arrive, our engineers will do all the hard work, so you don't have to lift a finger. They'll install your new devices at your users' desks. Check security processes. Connect to the network and printers. Sort out OS support and log any issues with your IT department. And – if you choose – they can even take your old tech away and recycle it.

In-life support – At your side

Once you're all set up, you'll get the services and tools to manage and track your assets for their whole lifecycle. If you have any issues, need to use your warranty or add more devices, our UK support team will be available at the drop of a hat.

Recycle – In with the new

Time for a refresh? With PCaaS, you can choose new devices every three years. So, your employees will always have the right tech to do their jobs. And your old IT? It'll head back to us to be wiped securely and recycled sustainably. Start to finish, our services have got you covered.

Make your choice

Get started with PCaaS and its supporting services at whatever stage suits you.

Devices

- Devices, deployment workshop, extended hardware support, asset management

Pre-deployment

- Devices shipped to your site
- Staging at our UK technical integration centre, with rollout to your sites
