Cloud Migration Service

FUJITSU

A strategic approach to cloud migration

Fujitsu helps organizations to migrate IT systems to the most appropriate and suitable target platform, guided by in-depth discovery and assessment. Whether transitioning from traditional datacenters to agile cloud environments, returning to datacenters for specialized needs, or shifting between hyperscalers to leverage specific features and cost efficiency, Fujitsu ensures a fast, low-risk transformation.

Business challenges you might recognize:

Environment complexity	Demand for greater agility	Inefficient IT budget	Loss of control	Cloud native initiatives	Cloud isolation	Scarce migration skills

To drive successful transformation, organizations must balance the urgency of migrating critical systems with the inherent complexity of transformation. Fujitsu applies deep industry expertise and advanced migration and transformation tools through a proven methodology to manage complex migrations. You can choose your implementation in a fast modular way or as a wider strategic program. Our vendor-neutral, multi-cloud approach enables a low-risk transition to the optimal mix of public cloud, private cloud, or hosted environments—based solely on what's best for your business.

Our Cloud Migration Service:

- Takes the output provided by the Cloud Transformation Assessment
- Reduces the cost of migration
- Delivers migration with minimal risk
- Keeps focusing on business objectives

Key decisions regarding the future of business applications, and the most appropriate transformation approach, are made during the Cloud Transformation Assessment. Cloud Migration Service offers a quick, de-risked approach to the Rehost ('lift and shift') , Replatform and Relocate options.
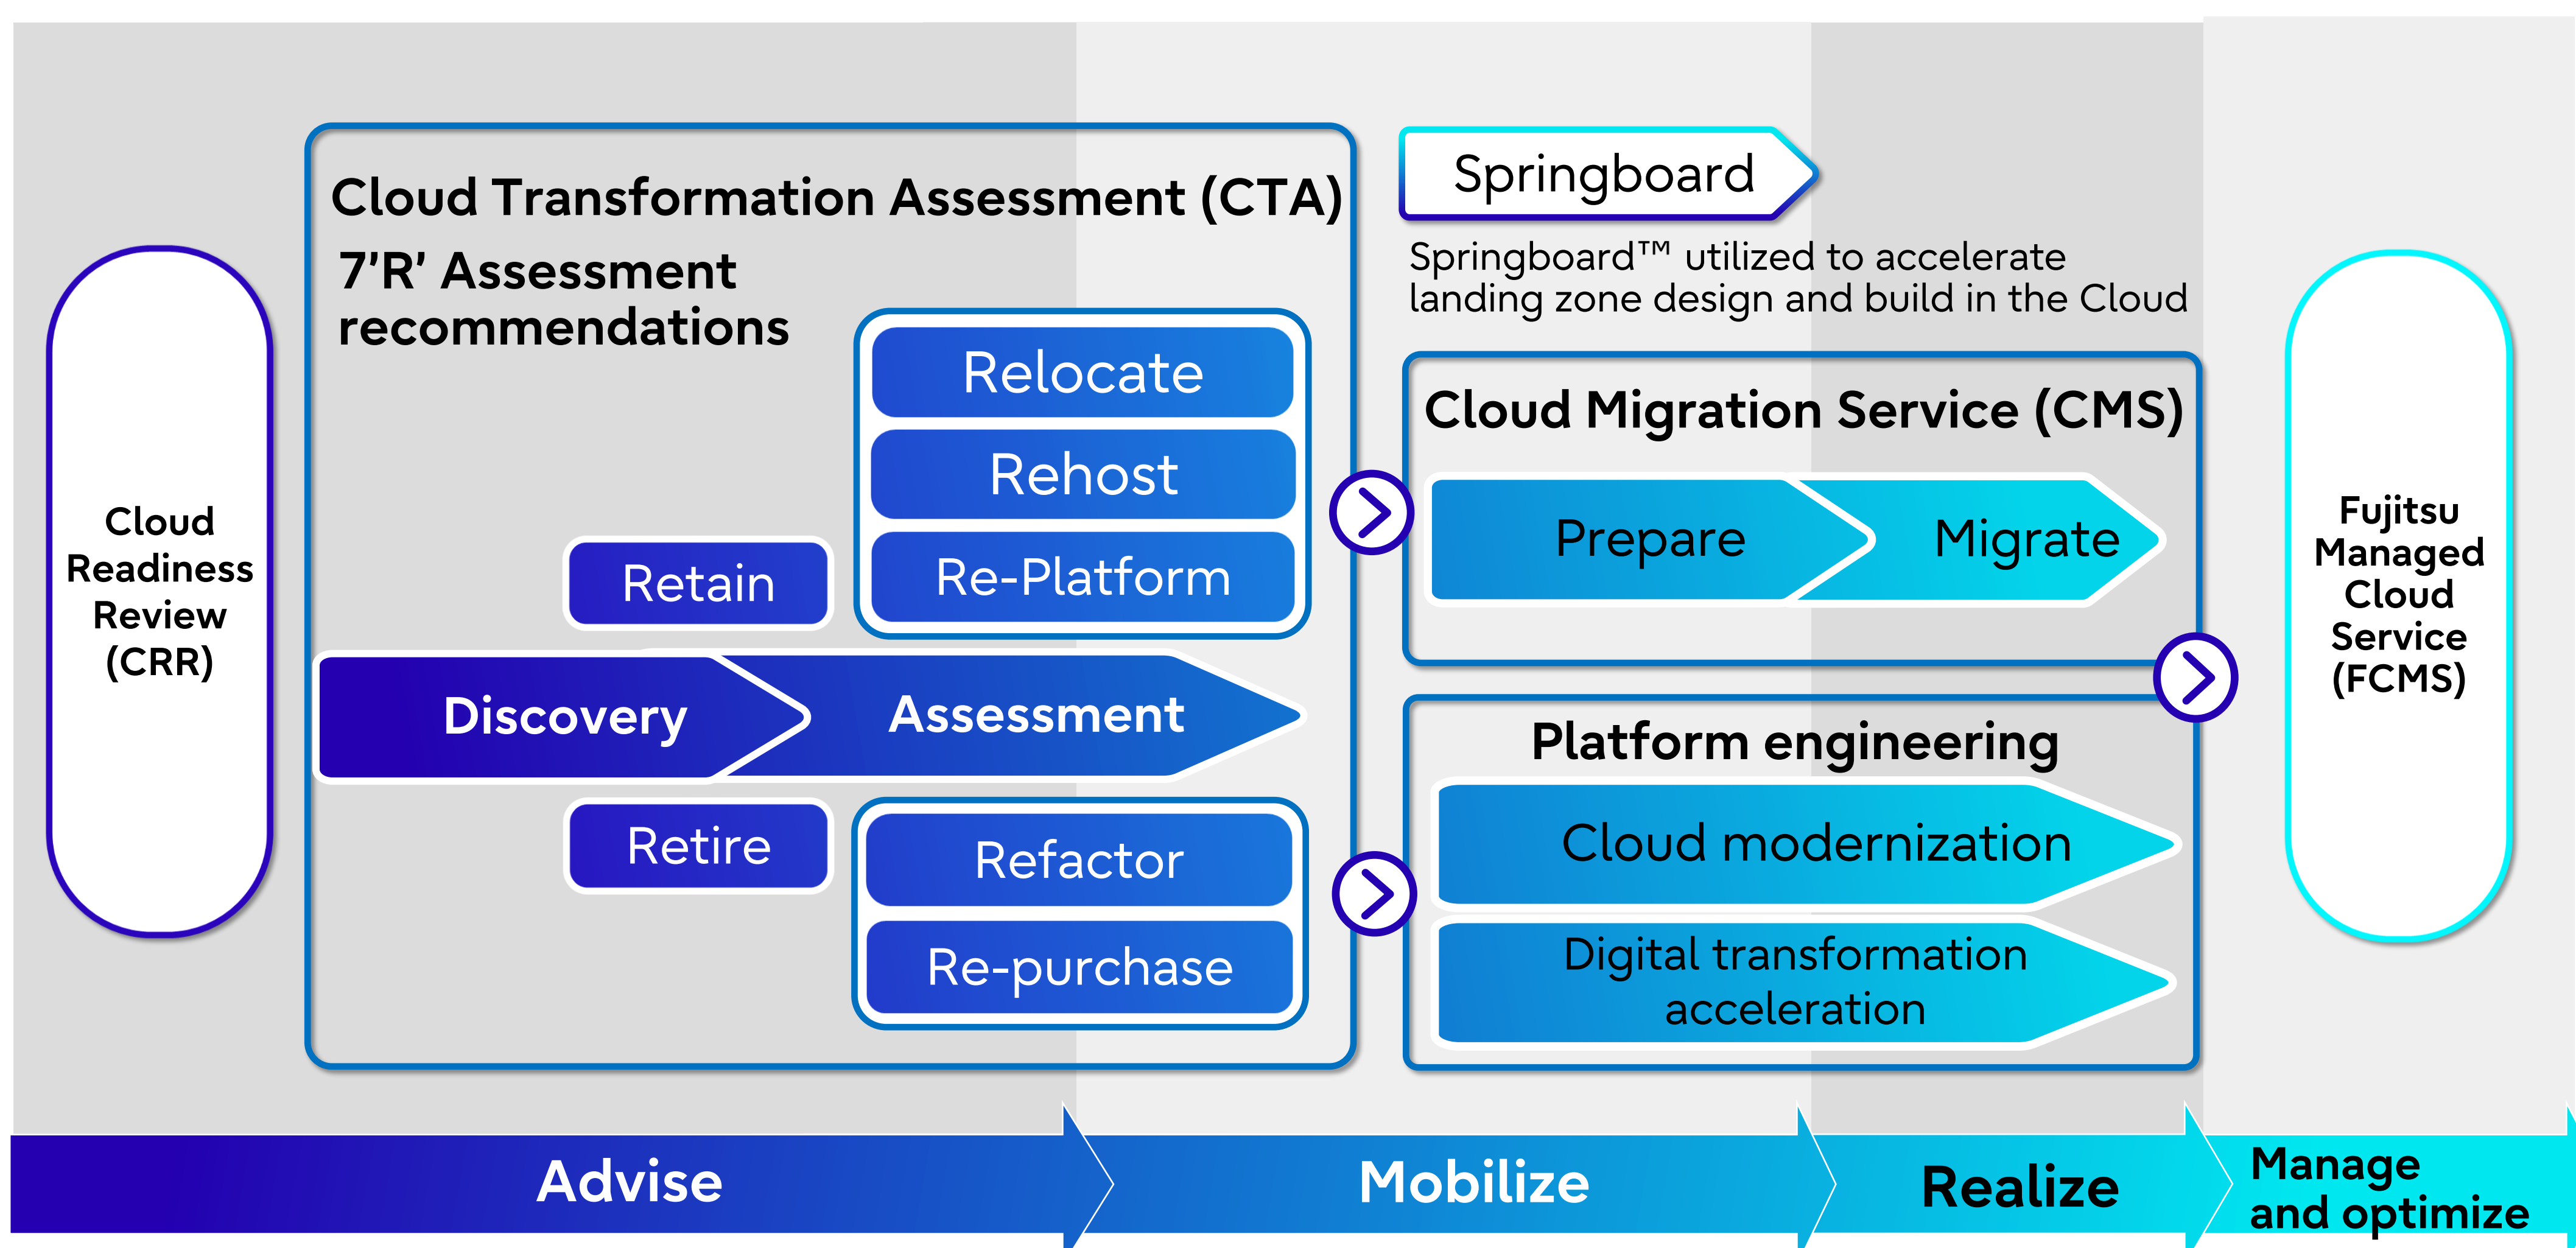

"Platform agnostic: anywhere to anywhere."

Why Fujitsu?

A transformation partner
Using our comprehensive range of capabilities and services, proven methods, and accredited experts, focusing on your business and technical imperatives.

Global capability for cost-effective delivery
We combine industry know-how with broad technology expertise in all cloud aspects. Working with dedicated teams to provide a consistent and highly efficient approach.
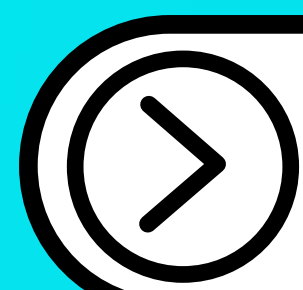

Breadth of cloud portfolio and experience
Extensive knowledge of legacy systems and years of experience with the end-to-end assessment migration and ongoing management and optimization.

Security and compliance at the heart
Firmly integrated into all transformation recommendations and play an integral role to our transformation planning.

Want to assess the maturity curve of your organization?
Reach out to our experts to accelerate your cloud journey!
